Your Census of Agriculture

Do your part to be counted.
There's strength in numbers.

The Census of Agriculture is a complete count of America's farms and ranches and the people who operate them. Taken every five years, the Census provides valuable information used at the local, state, and national level to plan for the future.

USDA will mail the 2012 Census of Agriculture in late December 2012. Your response to the Census of Agriculture is required and protected by law (Title 7, U.S. Code, and CIPSEA, Public Law 107-347).

Your response provides information needed for agricultural planning and decisionmaking. Farmers, ranchers, agri-businesses, lenders, agricultural organizations, policymakers, and many others use the information to make decisions on facility locations, crop insurance rates, conservation programs, and marketing that can benefit you, your industry, and your community.

The Census is your voice, your future, and your responsibility. For more information about the Census of Agriculture, please:

"Intrigue" was taken by eighteen year old Elizabeth Collins from La fontaine, Indiana. Elizabeth's picture appears on the top left of the front cover.

The photograph on the bottom right was taken by Mackenzie Cumberledge. Mackenzie is from Columbus, Indiana and is twelve years old.

The photograph on the back cover was taken by sixteen year old Layne Sanders from Greensburg, Indiana. Layne calls her picture "Lickin' Good".

We extend a special thanks to the farmers, agri-businesses, extension officials and others who voluntarily provided basic data used to prepare the statistics presented in this publication and to the corps of enumerators who so faithfully collected much of our raw data.

We would also like to thank all of the 4-H photography members that submitted pictures for use in our publication. All of the photos were included on posters displayed at the 2010 Indiana State Fair.

In this 2011-2012 annual issue of the "Indiana Agricultural Statistics" publication you will find information about Indiana's entire agricultural industry. This is the 86th edition and is published by the cooperative efforts of Purdue University and USDA's National Agricultural Statistics Service.

We are again pleased to feature the photography talents of 15 individual 4-H members within Indiana's 2011-2012 Agricultural Statistics Annual Summary. These photographs, exhibited at the 2011 Indiana State Fair, provide a glimpse of Indiana's agriculture from future farmers' perspective. We are grateful to all of the 4-H members who submitted their photos for publication

This publication satisfies the growing need for accurate, reliable and unbiased information and data. The data is collected from Indiana Farmers, agricultural businesses, USDA Farm Service Agency County Staff, Purdue University County Extension Staff, NASDA Enumerators and others that make this Publication possible.

This data is used to provide facts to decision makers that determine the future of Indiana's agricultural industry. The goal for this publication remains unchanged. It is to provide the public with data to help them understand the current situation of Indiana's farming community and future opportunities. While we strive to exceed this goal the Indiana Field Office of USDA's National Agricultural Statistics Service assures that all individual reports and business data are held in the strictest confidence. We take every action possible to protect your data.

Indiana agriculture continues to be a growing segment of the State's economy, with Indiana ranked in the top ten nationally for farm receipts. Hoosier farmers should take pride in the fact that even with adverse weather conditions, rising production expenses and prices, Indiana agriculture continues to thrive. Indiana continues to rank near the top nationally in the production of corn, soybeans, popcorn, blueberries, peppermint, spearmint, processing tomatoes, fresh market melons, and vegetables for processing. Indiana livestock producers put our state's rank at the top for hogs, chickens, eggs, and turkeys.

This Federal/University cooperative effort has existed since 1925 and continues to enhance the opportunity for agricultural research programs for State specific statistical projects in support of agricultural researchers and decision makers. Some of those projects include Agronomic Survey of Indiana Corn and Soybean Growers, Plant Disease and Fungicide Use Survey, and Timber Price Survey. Results of these special research efforts are published by the individual research programs. Results from these special surveys are not a part of this publication but please feel free to contact us for reference to those researchers for additional information.

Thank you for the opportunity to serve the agricultural community, with your help, in providing timely, accurate, and unbiased data. Please let us know your comments and suggestions.

Sincerely,

Greg Matli

[1] Value of Agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

The above estimates of Growing Degree Days (GDD) Normals are derived from normal temperatures (1971-2000) at mid-month and the corresponding GDD. For example, a weekly average temperature of 60°F resulted in 84 GDD. The basic formula is: 1/2 (max T -50) + 1/2 (min T -50) = GDD for one day. The maximum temperature is not allowed to exceed 86 degrees F. Negative units are not accumulated.

CROP HIGHLIGHTS

ACREAGE: Indiana's five major field crops totaled slightly over 12.1 million acres for harvest during 2011, up slightly from 2010. This increase was mainly due to additional winter wheat acreage. Corn acreage for harvest was up by less than one percent from a year ago, while soybean acreage for harvest was down about the same amount. Winter wheat harvested acreage was up 74 percent from a year ago, and all hay harvested acreage was unchanged from the 2010 level. Oat acreage for harvest decreased 12 percent from 2010. Other crops showing harvested acreage changes were tomatoes for fresh market, down 16 percent while tomatoes for processing decreased 6 percent. Sweet corn acreage for harvest decreased 14 percent, and watermelon harvested acreage increased 1 percent from 2010. In addition, cucumbers for processing decreased 31 percent from 2010, and cantaloupes for fresh market increased 13 percent.

YIELDS: The 2011 growing season got off to a slow start due to excessive rainfall. The state average precipitation total of 9.69 inches ranks April 2011 as the wettest April on record in Indiana. May was also very wet making it difficult for farmers to get corn and soybeans planted. Only 59 percent of the corn acreage and 25 percent of the soybeans had been planted by May 29th. Farmers found it very difficult to find enough dry days to get early cuttings of hay baled before more rain arrived. The excessive rainfall finally subsided in early June allowing most farmers to finish planting corn by mid month. Soybean planting was finally 95 percent complete by June 26th. Harvest of winter wheat progressed slowly throughout June but advanced quickly in early July with some reports of low test weights and vomitoxin in the grain. Temperatures during July were ranked as the 5th hottest in 117 years of recorded data. This hot, dry weather was detrimental to crop yields as it caused poor pollination in some of the corn acreage and pod abortion in the soybean crop. Grass hay yields were also reduced due to the July weather. Oat harvest went smoothly with fair yields reported. Closer to normal temperatures returned to the state in August, but dry soil conditions continued into September. Many farmers noted that the crops were maturing very rapidly in early September due to the dry conditions, but cool, rainy weather arrived late in the month which slowed the process. Harvest of corn and soybeans began in late September and moved at a slower than normal pace throughout October. Harvest gained momentum in early November with soybeans being 96 percent complete by November 13th and corn harvest reached 95 percent complete by the 27th of the month.

The average yield for corn in 2011 was 146 bushels per acre, 11 bushels below the 2010 yield. Soybeans yielded 45.5 bushels per acre, 3.0 bushels below 2010. The average yield for winter wheat, at 62 bushels per acre, was 2 bushels above the previous year's yield of 60 bushels per acre. The average oat yield of 61 bushels per acre was down 5 bushels from the previous year's yield of 66 bushels per acre. All hay yield of 2.84 tons per acre was up marginally from the 2010 yield of 2.83 tons per acre. Popcorn averaged 4,000 pounds per acre, down 700 pounds from the previous year's yield.

PRODUCTION: Corn produced during 2011 totaled 839.5 million bushels, 7 percent below the 2010 level of 898.0 million bushels. Soybean production was 240.7 million bushels, 7 percent below the 258.5 million bushels produced a year earlier. Winter wheat production increased 80 percent from a year earlier, to 24.8 million bushels. Popcorn production totaled 276.0 million pounds, 7 percent below the 2010 level. Oat production of 427 thousand bushels was 19 percent below the 528 thousand bushels produced in 2010. All hay production, at 1.90 million tons, was only slightly above the previous year. Peppermint production of 599 thousand pounds remained virtually the same while spearmint production of 135 thousand pounds declined 4 percent from 2010. Apple production decreased 23 percent to 20.0 million pounds. Blueberry production totaled 1.6 million pounds, a 56 percent decrease from the previous year.

BIOTECHNOLOGY VARIETIES

The National Agricultural Statistics Service conducts the June Agricultural Survey in all States each year. Randomly selected farmers across Indiana are asked if they planted corn or soybean seeds that, through biotechnology, are resistant to herbicides, insects, or both. Conventionally bred herbicide resistant varieties were excluded. Insect resistant varieties include only those containing bacillus thuringiensis (Bt). Stacked gene varieties include those containing biotech traits for both herbicide and insect resistance.

[1] NASS will no longer estimate numbers from survey data for Cattle County estimates. The new approach for setting livestock county numbers, termed "raking', utilizes county level livestock information from the Census of Agriculture, administrative data and current year state-level Agricultural Statistics Board (ASB) inventory and production estimates. To provide the data user with a consistent data series, NASS has established county numbers using the raking approach for commodities beginning with data from the 2007 Census. For cattle, this new methodology was implemented with the 2008 numbers. These new data items are available in both Quick Stats 1.0 and Quick Stats 2.0 databases. Previously established estimates for these years have been removed from all versions of Quick Stats. District level estimates will no longer be published for Cattle. This is consistent with the Census of Agriculture. For more information about this new methodology, go to http://www.nass.usda.gov/Data_and_Statistics/County_Data_Files/Livestock_County_Estimates/index.asp

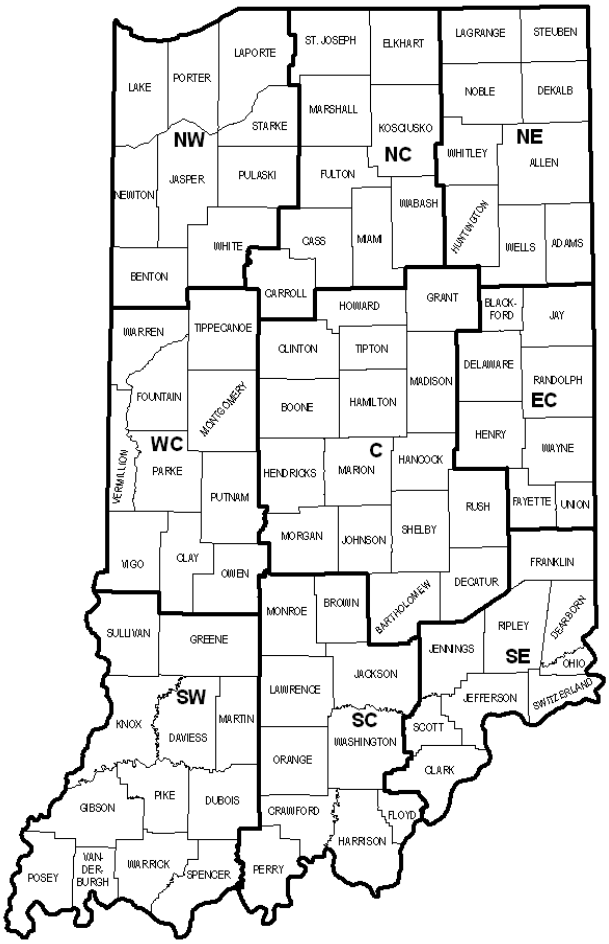
COUNTY HIGHLIGHTS



COUNTY HIGHLIGHTS

The following pages of county statistics represent the results of a survey of over 15,000 farm operators following the 2011 harvest season. In addition to these data are selected items of interest from the U.S. Population Census, 2007 Census of Agriculture, and 2010 Cash Receipts information from the Bureau of Economics Analysis. The County Highlights section summarizes the importance of agriculture to each and every Indiana county while comparing the magnitude of importance across counties.

Planted acreage for hay is represented by three dashes because this category is not estimated, planted acreage and yield for popcorn are represented by three dashes because these categories are not surveyed; in all other places the three dashes represent zero for that county. An asterisk signifies that the county has data for this item, but it cannot be disclosed for confidentiality purposes. The 2007 Chicken data from Census includes only layers twenty weeks old and older.

Below is a list of comparable items at the state level.
