

Turkeys Raised Methodology and Quality Measures

ISSN:

Released October 28, 2022, by the National Agricultural Statistics Service (NASS), Agricultural Statistics Board, United States Department of Agriculture (USDA).

Scope and Purpose: The Turkeys Raised survey is conducted in all States that have qualifying operations. The target population consists of all known operations who are raising 1,000 or more turkeys annually. Data are summarized for all operations in the target population. If turkeys were placed in more than one State, the inventory is recorded by State where the turkeys are placed. Turkeys raised estimates are published for the U.S. and thirteen States individually. The remaining States are combined and published as ‘Other States’.

Survey Timeline: The reference period for the Turkeys Raised survey is September 1 of the previous year to August 31 of the current year. The data collection period lasts approximately two weeks. States complete data collection, analysis, summarization, and submission of estimates during the month of September. During this time, a National review is completed, and National estimates are established. Estimates are released to the public in late September on the date designated by the Agricultural Statistics Board (ASB) annual publication calendar.

Sampling: This survey is a complete census of the qualifying records described above on the NASS List Sampling Frame. The List Sampling Frame is a current and unduplicated list of agricultural operations, and all current turkey grow-out operations are assumed to be on the list. If a new turkey grow-out operation is found at any time, the operation is added to the List Sampling Frame. Since this is a census of turkey grow-out operations, all sample weights are equal to one. Each operation accounts only for itself.

Data Collection: All federal data collections require approval by the Office of Management and Budget (OMB). NASS must document the public need for the data, apply sound statistical practice, prove the data does not already exist elsewhere, and ensure the public is not excessively burdened. The questionnaire must display an active OMB number that gives NASS the authority to conduct the survey, a statement of the purpose of the survey and the use of the data being collected, a response burden statement that gives an estimate of the time required to complete the form, a confidentiality statement that the respondent’s information will only be used for statistical purposes in combination with other producers, and a statement saying that response to the survey is voluntary and not required by law.

All Regional Field Offices (RFO) use the same standardized questionnaire for data collection. For consistency across modes, the paper version is considered the master questionnaire and the Computer Assisted Self Interview (CASI), mobile Computer Assisted Telephone Interview (mCATI), and Computer Assisted Telephone Interview (CATI) instruments are built to model the paper questionnaire. The questionnaire content and format are evaluated annually through a specification process where requests for changes are evaluated and approved or disapproved. Input may vary from question wording or formatting to a program change involving the deletion or modification of current questions or addition of new ones. If there are significant changes to either the content or format proposed, a NASS survey methodologist will pre-test the changes for usability. Prior to the start of data collection, all modes of instruments are reviewed, and CASI, mCATI, and CATI instruments are thoroughly tested.

Sampled operations receive a pre-survey letter explaining the purpose and importance of the survey and that they are being contacted for survey purposes only. Attached to the letter is a complete copy of the paper questionnaire and a pass code to complete the survey securely online. RFOs are responsible for their data collection strategy which must include provisions for respondents to report securely online. If a response is not received by mail or online, respondents are contacted by CATI.

Survey Edit: As survey data are collected and captured, they are edited for consistency and reasonableness using automated systems. Relationships between data items on the current survey are verified and in certain situations those

items may be compared to data from earlier surveys to make sure certain relationships are logical. The edit will determine the status of each record to be either “dirty” or “clean”. Dirty records must be updated and reedited or certified by an analyst to be clean. If updates are needed, they are reedited interactively. Only clean records are eligible for analysis and summary.

Analysis Tools: Edited data are processed through an interactive analysis tool which displays data for all reports by item. The tool provides scatter plots, tables, charts, and special tabulations that allow the analyst to compare an individual record to similar records. Outliers and unusual data relationships become evident and assigned RFO staff review them to determine if they are correct. The tool allows comparison to an operation’s previously reported data to detect large changes in the operation. Data found to be in error are corrected, while data found to be correct are retained.

Nonsampling Errors: Nonsampling errors are present in any survey process. These errors include reporting, recording, and editing errors. Steps are taken to minimize these errors, such as comprehensive interviewer training, validation, and verification of processing systems, application of detailed computer edits, and evaluation of the data via the analysis tools.

Estimators: The Turkeys Raised survey is a complete enumeration of all known turkey grow-out operations raising 1,000 or more turkeys annually. Turkey grow-out operations are selected from the list of all agricultural operations, and new operations are added into the sample when discovered. No coverage adjustment is made.

Response to the Turkeys Raised survey is voluntary. Producers may refuse to participate in the survey, may not be located during the data collection period, or may submit incomplete reports. The sampling weights for current items are equal to 1 since the survey is a census of all records. No adjustments are needed since all nonresponse data items and units are manually imputed by RFO statisticians. The estimates are a summation of all reported and imputed data. The measurement of error due to sampling in the current survey period is zero for a fully enumerated census. Moreover, standard errors and coefficients of variation (CVs) are zero for all current data items collected.

Estimation: When all samples are accounted, all responses fully edited, and the analysis material is reviewed, each assigned RFO executes a summary to evaluate and analyze the data under its responsibility. Since identical surveys are conducted in each State, the samples are pooled, and National survey results computed. The summary results provide multiple indications and information to assess the performance of the current survey and evaluate the quality of survey indications, such as response rates and strata level expansions. RFOs are responsible for performing a detailed review of their survey results. Any irregularities revealed by the summary must be investigated and, if necessary, resolved. Assigned RFOs interpret the survey results and submit a recommended estimate to Headquarters for turkeys placed, percent lost, and turkeys raised by geographic region. NASS assembles a panel of statisticians to serve as the ASB, which reviews the National results and establishes the National estimates. The ASB follows the same approach the assigned RFOs do in determining the National estimate.

Previous year’s estimates are subject to revision when current year’s estimates are set. Revisions are the result of late reports or corrected data. Every five years, NASS conducts the Census of Agriculture, which is an exhaustive data collection effort for all known farm operations across the United States. Estimates are thoroughly reviewed for possible revision after data from the Census of Agriculture are available. The information gathered from the Census of Agriculture is used to establish benchmark levels by which the survey estimates can be compared, and bias determined.

Quality Metrics for Turkeys Raised

Purpose and Definitions: Under the guidance of the Statistical Policy Office of the OMB, NASS provides data users with quality metrics for its published data series. The metrics tables below describe the performance data for surveys contributing to the publication. The accuracy of data products may be evaluated through sampling and nonsampling error. There is no sampling error present for this survey since it is a census of the target population; however, nonsampling error is evaluated.

Sample size is the number of observations selected from the population to represent a characteristic of the population. Operations that did not have the item of interest or were out of business at the time of data collection have been excluded. Multi-state operations that report from a headquarters (HQ) location are only counted once in sample size calculations despite the number of locations they may have.

Response rate is the proportion of the above sample that responds to the survey.

Weighted item response rate is a ratio of reported survey data expanded by the original sampling weight compared to final nonresponse adjusted summary totals. Operations may report data in multiple states. All data reported for a particular state is included in the weighted item response rate for that state even though the HQ operation may be located in another state.

Turkeys Raised Survey Sample Size and Response Rates: To assist in evaluating the performance of the estimates in the Turkeys Raised report, the sample size and response rates are displayed. Response rates overall for 2021 and 2022 are displayed.

Turkeys Raised Survey Sample Size and Response Rate - States and United States: September 1, 2021-2022

	Sample Size		Response rate	
	2021 (number)	2022 (number)	2021 (percent)	2022 (percent)
Arkansas	3	3	100.0	66.7
California	2	5	0.0	80.0
Indiana	5	4	80.0	75.0
Iowa	43	41	76.7	56.1
Michigan	20	19	45.0	42.1
Minnesota	78	71	66.7	60.6
Missouri	7	7	100.0	42.9
North Carolina	5	4	40.0	75.0
Ohio	9	9	66.7	66.7
Pennsylvania	24	21	100.0	47.6
South Dakota	41	41	85.4	87.8
Virginia	5	6	80.0	66.7
West Virginia	1	1	0.0	0.0
Other States ¹	20	21	95.0	76.2
United States	263	253	75.3	63.6

Access to NASS Reports

For your convenience, you may access NASS reports and products the following ways:

- All reports are available electronically, at no cost, on the NASS web site: www.nass.usda.gov.
- Both national and state specific reports are available via a free e-mail subscription. To set-up this free subscription, visit www.nass.usda.gov and click on “National” or “State” in upper right corner above “search” box to create an account and select the reports you would like to receive.
- Cornell’s Mann Library has launched a new website housing NASS’s and other agency’s archived reports. The new website, <https://usda.library.cornell.edu>. All email subscriptions containing reports will be sent from the new website, <https://usda.library.cornell.edu>. To continue receiving the reports via e-mail, you will have to go to the new website, create a new account and re-subscribe to the reports. If you need instructions to set up an account or subscribe, they are located at: <https://usda.library.cornell.edu/help>. You should whitelist notifications@usda-esmis.library.cornell.edu in your email client to avoid the emails going into spam/junk folders.

For more information on NASS surveys and reports, call the NASS Agricultural Statistics Hotline at (800) 727-9540, 7:30 a.m. to 4:00 p.m. ET, or e-mail: nass@usda.gov.

The U.S. Department of Agriculture (USDA) prohibits discrimination against its customers, employees, and applicants for employment on the basis of race, color, national origin, age, disability, sex, gender identity, religion, reprisal, and where applicable, political beliefs, marital status, familial or parental status, sexual orientation, or all or part of an individual's income is derived from any public assistance program, or protected genetic information in employment or in any program or activity conducted or funded by the Department. (Not all prohibited bases will apply to all programs and/or employment activities.)

If you wish to file a Civil Rights program complaint of discrimination, complete the [USDA Program Discrimination Complaint Form](#) (PDF), found online at www.ascr.usda.gov/filing-program-discrimination-complaint-usda-customer, or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter to us by mail at U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, by fax (202) 690-7442 or email at program.intake@usda.gov.

2022 USDA Fall Virtual Data Users' Meeting

November 15, 2022

FREE AND OPEN TO THE PUBLIC

USDA Fall Data Users' Meeting

Virtual Meeting

November 15, 2022

12:00 – 3:30 p.m. ET

USDA's National Agricultural Statistics Service (NASS) will hold an open forum for users of U.S. domestic and international agriculture data. NASS is organizing the 2022 Fall Data Users' Meeting in cooperation with five other USDA agencies – Agricultural Marketing Service, Economic Research Service, Farm Service Agency, Foreign Agricultural Service, and World Agricultural Outlook Board – and the Census Bureau's Foreign Trade Division. Agency representatives will provide updates on recent and pending changes in statistical and information programs important to agriculture, answer questions, and welcome comments and input from data users.

For registration details or additional information about the Data Users' Meeting, see the meeting page on the NASS website (https://www.nass.usda.gov/Education_and_Outreach/Meeting/index.php).
