Mr. Ray Wyatt, Phoenix, Arizona.

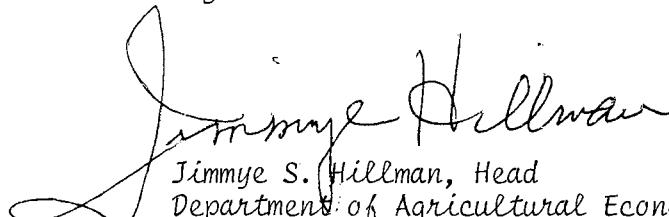

INTRODUCTION

Many important decisions pertaining to the agricultural sector of the United States and Arizona economies must soon be faced. Particularly important to individual farm and ranch operations are decisions about agriculture's economic condition. An important tool in making decisions affecting the future of agriculture is a supply of unbiased historic and current data about agriculture as it has existed and now exists. Of prime importance are production, farm income, cash receipts and cost of production reports on a national level. A full range of this type of data must be available. For instance, the Nation's 1977 realized gross farm income was at a record high \$106.1 billion. That statistic, taken by itself would indicate a very strong economic position for United States farmers and ranchers. However, production expenses rose \$4 billion in 1977 to \$85.7 billion. The result was a \$1.5 billion decrease in the Nation's 1977 realized net farm income.

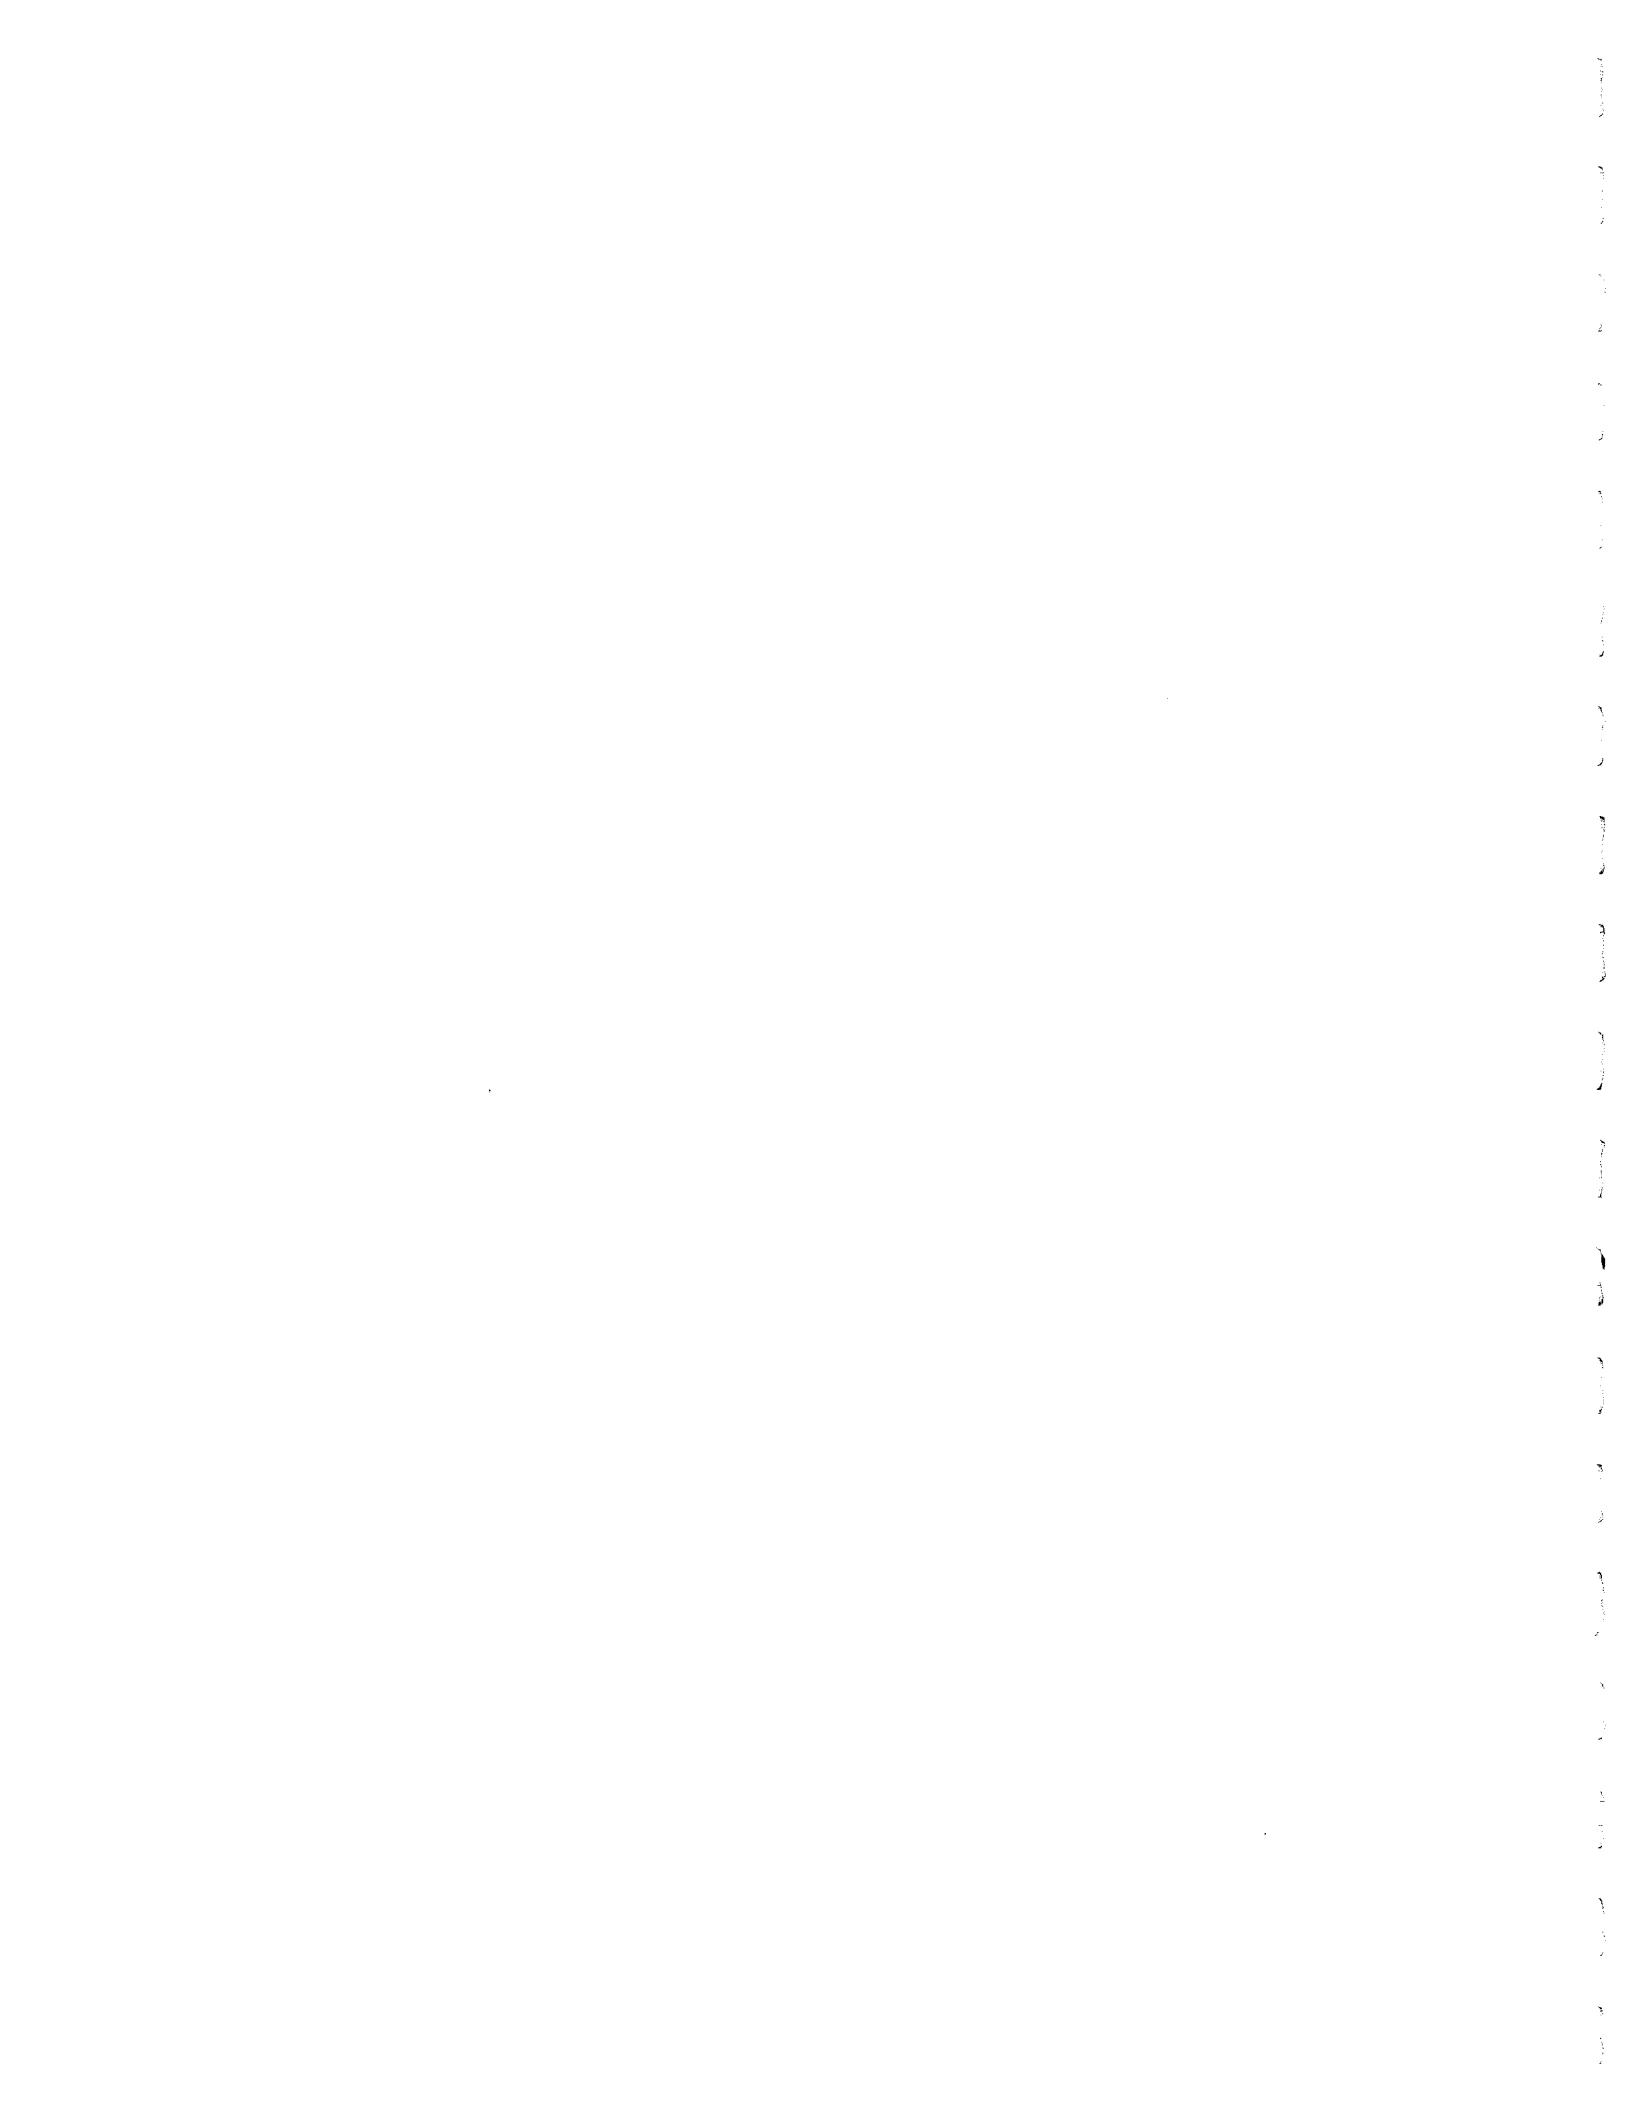

The preliminary estimate of Arizona's 1977 cash receipts from agricultural marketings is \$1.26 billion, up 2 percent from 1976. Cash receipts from crop sales, at \$694.1 million, was down 1 percent while livestock cash receipts increased 5 percent to \$567.1 million. Estimates of Arizona's production costs and realized net farm income will be published later. Besides the \$1.26 billion of cash receipts from crop and livestock sales, Arizona's agriculture also generates other income for the State's agri-business industry. Credit, marketings services, hired labor, machinery, fuel, chemicals and other inputs are required and supplying these inputs is an integral part of the agricultural and total economy of Arizona. These agri-service businesses also require agricultural statistics in order to know how, where and when to best serve Arizona's agricultural producers.

These economic statistics are prepared throughout the year based on surveys conducted in each state. The University of Arizona, College of Agriculture and United States Department of Agriculture's Statistical Reporting Service (now Economics, Statistics, and Cooperatives Service) joined efforts in 1965 to maintain a series of State and County agricultural statistics for Arizona. Collection and analysis of the data provide comparability from year to year. A second factor of the joint Federal-State program, is the elimination of conflicting estimates. As a result of this cooperative effort, our program has been recognized as Arizona's official source for agricultural production and economic information.

This bulletin, "1977 Arizona Agricultural Statistics", is the thirteenth issue prepared as a cooperative effort. It is the most comprehensive annual source of statistics available on Arizona agriculture.

Total, All Commodities	1,079,499	1,329,882	1,240,190

VALUE OF MARKETINGS: Values in the table above were developed by the Arizona Crop and Livestock Reporting Service. Crop values are value of production. That is, values were computed by multiplying production of each crop by its season average price. Value of production for major crops are shown elsewhere in this bulletin and values for these major crops account for most of the total. Values for minor crops not included in the regular program of estimates include such crops as dry beans, forest products, deciduous fruits, nuts, chili peppers, etc.

Values for livestock items were determined by multiplying values per unit marketed by the number of units (head, pounds, gallons, etc.) marketed.

Total value for all commodities produced or marketed in 1977, \$1.2 billion, was 7 percent below 1976. The decrease was primarily a result of the much smaller wheat crop in 1977 and a lower value of cattle and calf marketings. Value of crop production represented 59 percent of the total in 1977 compared to 60 percent in 1976 and 53 percent in 1975.

VALUE OF MARKETINGS AND HOME USE: Arizona, by counties, 1975, 1976 and 1977

Agricultural Summary - 1977

Wesley Britton, Agricultural Statistician

WEATHER: Scattered rainfall was recorded in January with several reporting stations measuring well above normal for the month, particularly in eastern and northeastern sections. Interruptions of field work were limited to some lettuce harvest disruption with frost and ice in the heads. February was the beginning of a long dry spell in many areas of the State. Mid-month high temperatures were at record-breaking levels at several weather stations. However, cooler weather and rain showers at higher elevations developed during late February. Drought conditions continued and worsened during the March-July period, although eastern and southeastern areas continued to receive scattered showers. Scattered showers and average temperatures prevailed during August in most areas. However, August rainfall was heavy in some areas -- especially in southern Yuma County. Heavy rains caused some boll rot and hay damage in the Yuma area, and high humidity levels throughout the central and western areas caused a serious insect problem. Most of the remainder of the year was characterized as dry and mild. Exceptions were scattered showers in the higher elevations and heavy rains and flooding in the southeast in October. Rainfall was recorded throughout the State during the last week of the year.

Precipitation during 1977 was well below normal at many stations. Many farmers dependent on the San Carlos reservoir for irrigation water were unable to produce crops because the water supply there was virtually non-existent. Heavy irrigation and lack of run-off replenishment almost drained Lake Pleasant. Water storage in Roosevelt and other major reservoirs was well below normal by the end of the summer. Range conditions deteriorated throughout the year in most areas. Supplemental feeding and water hauling were often required as many stock water tanks dried up and soil moisture conditions deteriorated.

CROPS: Durum wheat production in 1977 was drastically lower than the large 1976 crop. The reduction from 319,000 harvested acres in 1976 to 85,000 acres in 1977 was due to sharply lower prices and lack of foreign demand. On the other hand, cotton acreage which was up sharply in 1976, showed a tremendous increase in 1977 -- up to 556,500 acres harvested. Acreage of wheat, other than durum, was down 51 percent while corn acreage was up 79 percent. Acreages of other major crops were near the 1976 levels. Insect control and managing water supplies were of major concern during the year. Field work was seldom hampered due to weather conditions.

LIVESTOCK: Cattle and calves in the State's feedlots increased considerably during the year. The beginning inventory was 361,000 head and the ending inventory was 422,000 head. On the other hand, beef cows and heifers were down from 364,000 head at the beginning of the year to 337,000 head at the end of the year. Ranch operators in many areas were faced with drought conditions throughout the year. Lack of snow cover during the previous winter and very short rainfall during the year caused range forage and water supplies to dwindle severely. Supplemental feeding was required in many areas to such an extent that Emergency Feed Assistance Program benefits were implemented by the federal government. Dairy cows remained stable at 68,000 head. Sheep and lambs declined 12 percent to 438,000 head by the end of the year. The decrease resulted from a sharp reduction in the number of sheep on feed. Hog and pig numbers increased 3 percent during the year, but chickens were down sharply from a beginning inventory of 795,000 birds to an ending inventory of 565,000.

NOTE: Every five years the Crop and Livestock Reporting Service has the opportunity to revise estimates for the previous five years. These revisions are based on data received after annual estimates have been published. Some of the estimates in this bulletin for the years 1971-75 have been revised from earlier published levels due to our five-year review of subsequent supplemental data.

Little Colorado	Lyman	30.6	8.6	15.6	15.0		
Little Colorado	Show Low Lake	5.1	5.1	.8	2.4		

1/ Based on 15-year period, 1958-72.

2/ Average is for less than 15 years of record.

WATER SUPPLY: Extremely heavy runoff during March has assured much above normal water supplies for the major irrigated areas of Arizona. Most reservoirs are close to capacity and above average runoff is expected through May. Although the April-May volume forecasts are 50-90% above average, the heavy runoff is over. Water supplies will be adequate this year with a substantial amount of carryover storage available for next year.

SNOW COVER: Snow cover declined drastically the last half of March due to the warm temperatures and absence of heavy storms. Except for scattered patches, most of the snow below 8000' has melted. At the very highest elevations, however, good snow cover remains. Snow cover now varies from 116% of average on the Gila Watershed to 132% on the Verde, with the Salt and Little Colorado at 126% and 122% of average respectively.

PRECIPITATION: March precipitation was two to four times average at most mountain stations. The Verde and Tonto Watersheds received the greatest precipitation with amounts of 8 to 12 inches common at the higher elevations. Only a small area in the White Mountains on the Little Colorado received near normal amounts. Winter precipitation since November 1 is not particularly high due to the dryness of November and December.

SOIL MOISTURE: Surface soil moisture is decreasing below 7000', but will still yeild high runoff from a heavy storm in the next few weeks. Above 7000' the watershed is saturated, so very high runoff can be expected from moderate storms.

RESERVOIR STORAGE: Except for San Carlos, Roosevelt, Lyman, and the Colorado River Reservoirs, all storage facilities are full. Roosevelt Lake, containing 90% of capacity, is expected to fill by the end of the month. San Carlos and Lyman Reservoirs are about 1/4 full, but will not come close to filling. Painted Rock Dam contained 386,000 ac-ft. a month ago, but releases of 250 cfs. to 500 cfs. are slow reducing its contents.

PRINCIPAL ARIZONA CROPS IN 1977: Preliminary estimated acreage by counties and production in the State

CROP	STATE TOTAL	Apache	Cochise	Coconino	Gila	Graham	Greenlee	Maricopa	Mohave	Navajo	Pima	Pinal	Santa Cruz	Yavapai	Yuma
Alfalfa: Acres cut for hay Hay production, tons	210,000 1,367,000	2,500	10,000	400	500	8,000	2,000	90,000	1,200	4,900	2,500	15,000	1,000	4,000	68,000
Cotton: Upland, acres harvested Bales (180 lbs. net wt.), 1977 crop	515,000 1,050,000	32,100				11,700	1,000	234,800	2,800	19,400	123,700				89,400
Cotton: American Pima, acres harvested Bales (480 lbs. net wt.), 1977 crop	41,500 60,000	3,700				10,200		9,350		3,920	9,200				5,100
Barley: Acres harvested for grain Grain production, tons	55,000 100,320	800		*	2,500	*	26,000	*	*	1,800	20,000	600			3,000
Corn: Acres harvested for grain Grain production, tons <u>1/</u>	50,000 84,000	3,000	34,000	*	*	1,800	500	*	*	7,500	*	*	*	1,000	600
Sorghums: Acres harvested for grain Grain production, tons <u>1/</u>	90,000 201,600	400	18,000			16,800	400	26,500	1,100	900	2,600	6,100			17,200
Winter Wheat: Acres harvested for grain Grain production, tons	55,000 118,800	2,500	*			1,300	500	16,500	600	500	1,000	9,500			600
Durum Wheat: Acres harvested for grain Grain production, tons	85,000 183,600	2,600	*			1,200	300	28,000		4,800	41,000				7,000
Sugarbeets: Acres harvested Production, tons	12,800 285,000	2,200		*				5,540		3,630					1,410
Vegetables: Acres harvested <u>2/</u> Production, commercial cwt.	65,600 13,145,000	1,600				21,690				3,200	6,300				32,810
Grapefruit: Total bearing acres Production, 1976-77 crop, ctns.	9,750 6,000,000					6,260				*	*				3,000
Oranges: Total bearing acres Production, 1976-77 crop, ctns. <u>3/</u>	26,660 9,200,000					13,750				*	*				12,360
Lemons: Total bearing acres Production, 1976-77 crop, ctns.	19,900 10,000,000					3,100				*	*				16,800
Other Crops: Acres harvested <u>4/</u>	91,460	4,270	7,190	1,450	900	1,600	500	28,110	1,140	1,700	6,000	14,080	1,320	3,870	19,330
TOTAL: Acres harvested	1,327,670	10,170	114,690	2,050	1,700	55,100	5,300	509,900	6,940	15,700	45,770	249,650	3,220	9,470	298,010

1/ Does not include grain from acreage harvested for silage and forage.

2/ County acreages based on data from Arizona Fruit and Vegetable Standardization Service and County Agents.

3/ Includes tangerines and tangerine types.

4/ Includes miscellaneous fruits, vegetables and field crops not listed above. Does not include pasture.

*Acres harvested too small to warrant quantitative estimate. Acres, if any, are included in State totals.
