STATISTICS SERVICE

WALNUT PRODUCTION FORECAST

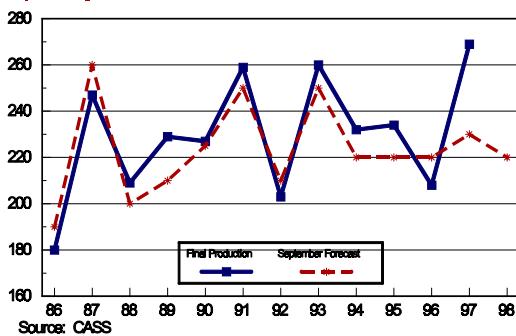

The 1998 California walnut production forecast is 220,000 tons, down 18 percent from 1997's production of 269,000 tons. This is 14 percent below the July forecast of 255,000. The September forecast is based on the Walnut Objective Measurement (O.M.) Survey, while the July forecast was based on subjective information provided by growers. The Objective Measurement Survey was conducted August 3 through August 29, 1998. Due to a very wet spring, the crop is about three weeks behind normal. The early varieties, such as Serr, look to be strong. Mid-season varieties, such as Vina, are expected to be about average, while late varieties, such as Hartley and Chandler, look to be off quite a bit from last year. Levels of sunburn are expected to be higher than last year.

The 1998 Objective Measurement Survey utilized a total of 731 blocks with two sample trees per block. Survey data indicated an average nut set of 1,407, down 20 percent from 1997's average of 1,753. The Hartley nut set was down 35 percent; Serr, up 104 percent; Franquette, down 30 percent; Chandler, down 17 percent from 1997. Percent of sound kernels in-shell was 94.4 percent Statewide. In-shell weight per nut was 21.4 grams, while the average in-shell suture measurement was 31.9 millimeters. The average length in-shell was 39.5 millimeters.

Estimated nut sets, sizing measurements, average number of trees per acre, and estimated bearing acreage were used in the regression formulas.

CALIFORNIA WALNUTS

Sept. Objective Forecast vs. Final Production

SURVEY HISTORY

The Walnut Objective Measurement Survey began in 1958 to fulfill industry needs for an accurate walnut production forecast prior to harvest. The original sample was chosen proportionally to county and variety of bearing acreage. With each succeeding year, additions and deletions have been made in the sample to adjust for acreage removed, new bearing acreage and refusals.

SAMPLING PROCEDURES

Once a block is randomly selected and permission is granted, two trees are randomly selected. An accessible branch is chosen which is 5 to 15 percent of the total cross-sectional area of the primary limbs and reachable with a twelve-foot ladder. Measurements are made on the trunk, each primary, and each split leading to and including the accessible branch. The sample tree and accessible branch are marked by a single tag.

On the accessible branch, every first of five nuts is picked for use in size and grade determinations. If available, at least ten nuts are harvested from the accessible branch for this purpose.

The following measurements are made on nuts selected for sizing:

1. Weight of nut including hull.
2. Width of shell at suture.
3. Width of shell 90 degrees to suture line (cross-suture).
4. Length of shell.
5. Kernel grade.
6. Weight of nut in-shell.

DATA RELIABILITY

The 80 percent confidence interval is from 200,000 tons to 240,000 tons. This means there is an 80 percent chance the 1998 production will fall within this range.

TABLE 1 -- California English Walnut Acreage, Production, Price And Value In-Shell

Year	Bearing Acres a/	Total Production	Per Bearing Acre	Price Per Ton	Total Value
		-- Tons --		-- Dollars --	
1987	176,000	247,000	1.40	984.00	243,048,000
1988	177,000	209,000	1.18	922.00	192,698,000
1989	179,000	229,000	1.28	1,070.00	245,030,000
1990	181,000	227,000	1.25	1,040.00	236,080,000
1991	181,000	259,000	1.43	1,060.00	274,540,000
1992	178,000	203,000	1.14	1,410.00	286,230,000
1993	176,000	260,000	1.48	1,390.00	361,400,000
1994	171,000	232,000	1.36	1,030.00	238,960,000
1995	176,000	234,000	1.33	1,400.00	327,600,000
1996	176,000	208,000	1.18	1,570.00	326,600,000
1997 b/	177,000	269,000	1.52	1,310.00	352,400,000
1998	177,000	220,000	1.24	7/99	7/99

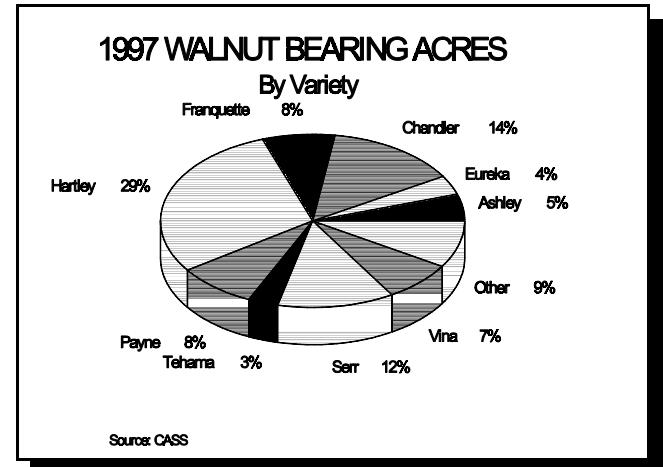

- a/ Bearing years include plantings of the following: Chandler, Chico, Howard, Tulare (1994 & Earlier); 50-55, 59-124, 4946, Amigo, Ashley, Bardoni, Cisco, Earhorn, Grove, Gustine, Honeycutt, Houston, Jensen, Lompoc, Marchetti, Nuggett, Payne, Pedro, Serr, Sunland, Tehama, Trinta, UCD 67-13, Vina, Westside (1993 and Earlier); Franquette, Franquette Scharsch, Mayette, Placentia, Poe, Willsons/Willsons Wonder, Woodland (1991 & Earlier); all other varieties not specified (1992 & Earlier).
- b/ Price Per Ton and Total Value are July 1, 1998 preliminary figures.

TABLE 2 -- Walnut Acreage By County As Of 1997

County	Bearing	Non-Bearing	Total
Alameda	94	0	94
Amador	564	30	594

1/ Coast includes: Contra Costa, Lake, Monterey, Napa, San Benito, San Luis Obispo, Santa Clara, and Sonoma counties.

2/ Sacramento Valley includes: Butte, Colusa, El Dorado, Glenn, Sacramento, Solano, Sutter, Tehama, Yolo, and Yuba counties.

3/ San Joaquin Valley includes: Fresno, Kern, Kings, Madera, Merced, San Joaquin, Stanislaus, and Tulare counties.

4/ District and State averages are derived by weighting county averages by county bearing acreage figures.
