September 2013

Dear Friends,

I am pleased to introduce the 2012 Colorado Agricultural Statistics Bulletin. As a lifelong farmer, I understand the importance of solid, comprehensive statistics to help make decisions that affect the development of your operation.

The National Agricultural Statistics Service (NASS) provides the most accurate figures for Colorado agriculture. As you review the information, please take special note of the contribution agriculture provides to the economy of our state. Tracking this information is important, not only in showing the value of our industry, but also to assist in making informed decisions that will shape the future of Colorado agriculture.

As a \$40 billion industry, Colorado's agriculture industry provides a safe, abundant food supply while generating economic activity that is critical to this state's vitality. In addition, our state's farmers and ranchers provide wildlife habitat and preserve the open space and vistas for which our state is well known.

The Colorado Department of Agriculture is dedicated to promoting agriculture on the local, state, national, and global levels and consider these statistics a valuable resource in that effort. Our Department offers a variety of resources to help Colorado's agriculture industry, and I encourage you to visit www.colorado.gov/ag to learn more.

I would like to thank the NASS Colorado Field Office and all of the farmers and ranchers who make this book possible.

Sincerely,

John T. Salazar
Commissioner

The Colorado Agricultural Statistics publication is compiled by the Colorado Agricultural Statistics Service, which is an agency within the U.S. Department of Agriculture, in cooperation with the Colorado Department of Agriculture.

United States Department of Agriculture
National Agricultural Statistics Service

September 2013

Dear Friends of Agriculture:

While many areas of the state and the nation saw some relief from the drought of 2012, many farmers and ranchers in Colorado experienced or are still experiencing severe dry conditions. I admire and am thankful for the determination of our producers in managing under such conditions.

Decisions made by producers and leaders in agriculture in times like these are only as good as the information available when making them. Therefore, I am pleased to present the 2013 Colorado Agricultural Statistics Bulletin made available through the Colorado Field Office of the USDA's National Agricultural Statistics Service in cooperation with the Colorado State Department of Agriculture. The estimates available in this bulletin and what we publish throughout the year are valuable tools for the producer and the agricultural industry to make sound decisions, especially in years where the drought continues to take its toll. This information is used for marketing decisions, planning, research, insurance/disaster programs, and policy decisions.

Thank you to the farmers and ranchers for taking time out of their busy schedules to provide the data needed to produce these statistics. I also want to thank the all the agribusiness, extension educators and the USDA's Farm Service Agency for contributing information for this bulletin and providing support for our programs.

This report would not be possible without the dedicated effort of field and telephone interviewers who collect this data and the office staff that compiles it. Thanks to Marni Mattner of Denver, CO for the cover photography. And thanks to the Colorado Department of Agriculture for covering the costs of printing this bulletin.

Finally, a special thanks to everyone who helped with the Census of Agriculture. The Census of Agriculture is the most comprehensive set of county data in the nation. It is scheduled to be released in February of 2014.

Sincerely,

A handwritten signature in black ink, appearing to read "William Meyer".

PRICES RECEIVED BY FARMERS

Prices received by farmers and ranchers provide a basis for calculating the income from the Agricultural Sector as part of the National Income Accounts. These data are also extensively used to analyze past and current marketing patterns and to make current and future marketing decisions. Prices received for major farm commodities are used in computing the Index of Prices Received by Farmers, an important indicator of the economic environment of the nation's agricultural producers.

Marketing year average prices, by commodity, Colorado, 2004-2012
