2022 CHEMICAL USAGE FOR POTATOES

State-level estimates for 2022 chemical usage for potatoes are now available, according to the USDA's National Agricultural Statistics Service. The 2022 Agricultural Chemical Use Survey of potato producers collected data about fertilizer and pesticide use as well as pest management practices in growing potatoes. NASS conducted the survey in nine states that together accounted for over 92% of the 901,000 acres planted to potatoes in the United States in 2022: Colorado, Idaho, Maine, Michigan, Minnesota, North Dakota, Oregon, Washington, and Wisconsin. The estimates can be accessed using the QuickStats online database, found here: <https://quickstats.nass.usda.gov>.

A pre-defined query of selected commodities can be found here:
