USDA TO GATHER COUNTY LEVEL DATA ON SMALL GRAIN CROPS

LAKEWOOD, Colo. – July 3, 2023 – The U.S. Department of Agriculture’s (USDA) National Agricultural Statistics Service (NASS) will survey producers in 32 states, including Arizona, Colorado, Montana, and Wyoming, for its Small Grain Crops County Estimates Survey (Crops CE).

The survey will collect information on total acres planted and harvested, and total yield and production of small grain crops down to the county level. Crops CE will provide the data needed to estimate county acreage and production of barley, oats, and wheat crops in the United States.

“The data provided by producers will assist federal and state programs to better support the farmer,” said Rodger Ott, Director, Mountain Regional Field Office. “I hope every single producer understands the importance of these data and will take the time to respond if they receive this survey. Producers lose out when there is no data to determine accurate rates for loans, disaster payments, crop insurance price elections and more. When enough producers do not respond to surveys, NASS is not able to publish data. Without data, agencies such as USDA’s Risk Management Agency or Farm Service Agency do not have information on which to base the programs that serve producers.”

Within the next few months, NASS representatives will contact selected Arizona, Colorado, Montana, and Wyoming growers to arrange interviews to conduct the survey. To safeguard all individual responses, NASS will publish only aggregate data, ensuring the confidentiality of all individual respondents.

Survey results from the Small Grain Crops County Estimates Survey will be made available via the [Quick Stats](#) database on December 15, 2023. These and all NASS reports are available online at www.nass.usda.gov/Publications. For state specific questions, please contact your USDA NASS State Statistician at 1-800-392-3202.
