

2004-05 SEASON CITRUS HIGHLIGHTS

PRODUCTION

U.S. citrus utilized production for the 2004-05 season totaled 11.4 million tons, 31 percent below the 2003-04 season and 36 percent lower than the record high production of 17.8 million tons for the 1997-98 season. Florida accounted for 67 percent of total U.S. citrus production. California totaled 29 percent, while Texas and Arizona produced the remaining 4 percent.

Production of **Florida** citrus in 2004-05 was 169.1 million boxes, down 42 percent from the 291.8 million boxes in the 2003-04 season. The primary reason for the reduced crop was the unprecedented three hurricanes and one tropical storm that passed through the state in August and September 2004. Production was lower for all varieties except tangelos. The orange crop production, at 149.6 million boxes, was the lowest since the 139.8 million boxes in 1991-92. Early-midseason-Navel production was down 37 percent and Valencia orange production was down 39 percent. Navel production, at 2.5 million boxes, was the lowest since the 1986-87 season. Navels, primarily a fresh use crop, comprised 46 percent of the total early-midseason-Navel fresh shipments. Grapefruit production at 12.8 million boxes was the lowest since 1935-36.

CITRUS BOX WEIGHTS

Approximate net weight by fruit type and States

State	Orange	Grapefruit	Tangerine	Lemon	Lime
<i>Pounds</i>					
FL	^{1/} 90	85	95	90	88
CA	75	67	75	76	--
TX	85	80	--	--	--
AZ	75	67	75	76	--

^{1/} Includes Temples and tangelos at 90 pounds.

In response to the need for more accurate citrus tree numbers following the hurricanes of 2004, a special census in selected counties was conducted during the first six months of 2005. DeSoto and Hardee counties were subjected to strong winds from Hurricane Charley. Indian River, Martin, Palm Beach, and St. Lucie, along the Atlantic coast bore the brunt of Hurricanes Frances and Jeanne.

Acreage losses varied from 1,486 (Palm Beach) to 18,560 (St. Lucie). Hardee's acreage peaked in 2002, while DeSoto's high was in 2000. Acreages in Indian River, Martin, and St. Lucie have been trending downward since 1994, and Palm Beach acreage has been declining since 1970. Decreases in acreage in the special counties were larger than corresponding decreases in tree numbers, with acres of oranges down 11 percent, grapefruit down 19 percent, specialty fruit down 17 percent, and all citrus down 13 percent. Florida's total bearing acreage, at 641,400 acres, is the lowest since the 1993-94 season.

CITRUS STATES: 2004-05 SEASON

PRODUCTION BY AREAS AND COUNTIES

Production in 2004-05 is down in all Florida commercial citrus production areas from the 2003-04 season. The Southern area is down the least at 14 percent, while the Indian River area is down the most at 76 percent. Two hurricanes passed directly over the Indian River area causing major reduction of the citrus crop. The Western area, also severely affected by a hurricane's direct hit, is down 52 percent. Production in the Central area is down 41 percent, while the Northern area is down 36 percent.

Production decreased in each of the 30 counties. Hendry County leads in total production with 29.6 million boxes, followed by Polk (24.8 million boxes), Highlands (21.3 million boxes), Desoto (13.6 million boxes), and Collier (10.5 million boxes). These top five counties produced 59 percent of the citrus crop.

VALUE

The value of the 2004-05 **U.S.** citrus crop was down 4 percent from last season to \$2.39 billion (packinghouse-door equivalent). Total value of production for 2004-05 was lower for all types of citrus, except grapefruit, lemons, and tangerines. Orange value of production decreased 16 percent from last season, while grapefruit value increased 25 percent. Tangerine value of production increased 13 percent from last season. Lemon value of production increased 30 percent. Tangelo and Temple values were down 20 percent and 33 percent, respectively, from the previous season.

The \$742.2 million preliminary value of the **Florida** 2004-05 citrus crop, the lowest since 1985-86, was down 17 percent from the 2003-04 season's revised value of \$891.5 million. On-tree values were lower for all orange varieties and tangelos but higher for grapefruit, Temples, and tangerines. Price-per-box was higher for all varieties except tangelos, with grapefruit's being the highest on record for both white and colored varieties. Normally, more grapefruit goes to processing rather than being shipped fresh; however, due to the season's reduced crop, slightly more grapefruit went fresh than processed.

FLORIDA CITRUS:

Value of sales on-tree, crop years 1995-96 through 2004-05

Crop year	Value	Crop year	Value
	<i>1,000 dollars</i>		<i>1,000 dollars</i>
1995-96	1,075,817	2000-01	862,031
1996-97	960,496	2001-02	966,803
1997-98	1,023,383	2002-03	787,378
1998-99	1,097,253	2003-04 ^{1/ 2/}	891,500
1999-00	1,108,523	2004-05 ^{2/ 3/}	742,201

^{1/} Revised.

^{2/} Excludes Lemons.

^{3/} Preliminary.

FOREIGN EXPORTS AND FROZEN CONCENTRATE

Fresh fruit exports totaled 9.9 million ^{4/5}-bushel cartons. Japan accounted for the majority of Florida grapefruit. Canada received the most of Florida orange and specialty fruit exports. A total of 9.9 million gallons of FCOJ, and 4.1 million gallons of FCGJ were exported this year. FCOJ exports equaled half as much as last year, and FCGJ exports were just over one-third as much as last year.

The final yield, reported by the Florida Citrus Processors Association, was higher this season for all oranges at 1.58, lower for tangerines at 1.46 and higher for grapefruit at 1.24.

^{1/} 2004-05 preliminary.

^{2/} Estimates discontinued.

FLORIDA CITRUS HARVESTING SEASON

AVOCADOS

Production of avocados increased from the previous season by 440,000 bushels, or 65 percent. This production of 1,120,000 bushels is the second largest crop in a ten year series. Bearing acreage is estimated at 6,400 acres, up from last season. The total value of the crop was up at \$14,448,000, even though prices paid to growers for fruit delivered to the packinghouse door were down from the previous season. More than two dozen minor tropical fruits are grown in South Florida. These varieties, sold mostly on the local fresh market, include annona, banana, carambola (star fruit), Barbados cherry, coconut, guava, jaboticaba, jacfruit, key lime, kumquat, litchi, longan, mango, monstera, papaya, passion fruit, plantain, pummelo, sapodilla, black sapote, mamey sapote, white sapote, and wax jambu.

FLORIDA AVOCADOS

Trees, acreage, yield, production, utilization, season average price, and value, crop years 1995-96 through 2004-05

Crop year	Bearing trees	Bearing acreage	Yield per acre	Utilization of production				On-tree	
				Total	Certified shipments	Local fresh use	Processed	Price per bushel	Value of production
	<i>1,000 trees</i>	<i>1,000 acres</i>	<i>Bushels</i>	<i>1,000 bushels</i>				<i>Dollars</i>	<i>1,000 dollars</i>
