

2007-08 SEASON CITRUS HIGHLIGHTS

U.S. AND FLORIDA PRODUCTION

U.S. citrus utilized production for the 2007-08 season is 13.0 million tons, up 24 percent from the 2006-07 season but 27 percent lower than the record high production of 17.8 million tons for the 1997-98 season. Florida accounted for 70 percent the total; California totaled 27 percent, and Texas and Arizona produced the remaining 3 percent.

Production of **Florida** citrus in the 2007-08 season is 203.8 million boxes, up 26 percent from the previous season. The primary reason for the increase is higher fruit per tree on all varieties. The average fruit per tree is 52 percent higher on early-midseason oranges (excluding Navel), and 59 percent higher on Valencias. The average fruit per tree on white grapefruit is the highest since the 1992-93 season, and on colored grapefruit higher than the previous three seasons.

The all orange crop production, at 170.2 million boxes is up 32 percent. Early-midseason-Navel orange production is up 27 percent, Valencia production had a 37 percent increase. All grapefruit production at 26.6 million boxes is 2.2 percent less than the 2006-07 season. Increases in production were recorded for all types of specialty fruit.

CITRUS Box WEIGHTS

Approximate net weight by fruit type and states

State	Orange	Grapefruit	Tangerine	Lemon	Lime
Pounds

TX	85	80	--	--	--
AZ	75	67	75	76	--

^{1/} Includes Temples and tangelos at 90 pounds.

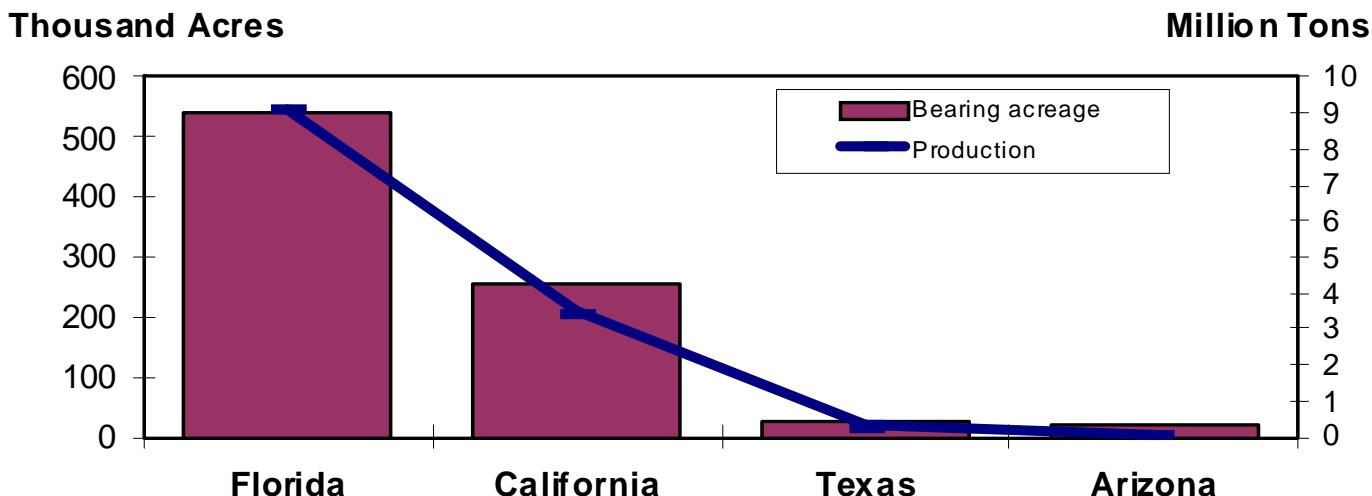

TREE CENSUS

Total citrus acreage was reduced to 576,577 and is currently the lowest since record keeping began with the 1966 tree inventory. Since the year 2000, total acreage has declined nearly 31 percent or the equivalent of 255,698 acres. Polk County has 81,375 acres, the most acreage of any county. Hendry, Highlands, and DeSoto follow with over 60,000 acres each.

All citrus trees are down 8 percent from 81,909,000 in 2006 to 75,376,100 in 2008. Of the total, oranges comprise 87 percent, grapefruit 8 percent, and the remainder includes specialty and other citrus. Since 2006, bearing trees decreased 7.2 percent to 71,000,600 while nonbearing trees declined 19.5 percent to 4,375,500.

The decrease in both acres and trees since the 2006 tree inventory is a direct result of increased urban development, tree removals due to citrus canker and greening diseases, abandonment of non-productive groves, and two planned water reservoirs located in major citrus producing areas.

LEADING CITRUS STATES: BEARING ACREAGE AND PRODUCTION, CROP YEAR 2007-08

PRODUCTION BY AREAS AND COUNTIES

Total citrus production in 2007-08 was up in all Florida commercial citrus production areas from the 2006-07 season. The Central and Western areas had the largest gains with increases of 16.2 million and 10.8 million boxes.

Production in the top four counties increased by 33 percent. Together, they produced 50 percent of all citrus. Polk led with 31.0 million boxes, Hendry had 24.4 million boxes. Highlands followed closely with 24.1 million boxes, and DeSoto completed the four with 22.0 million boxes. Gains were recorded in 28 counties with only Hillsborough and Palm Beach producing less citrus.

Leading orange producers were Polk at 27.1 million boxes, followed by Highlands at 22.7 million boxes and Hendry at 22.5 million boxes. Desoto came in fourth again this season at over 21.6 million boxes. The four counties combined accounted for 55 percent of the State's total oranges. Indian River and St. Lucie far surpassed all other counties in grapefruit production, with nearly 18 million boxes combined. Together, they accounted for 67 percent of the State's grapefruit crop.

The Central area produced 39 percent of the State's tangerines and 37 percent of the tangelos. The Southern area produced the second highest specialty crop, accounting for 28 percent of the tangerines and 17 percent of the tangelos.

VALUE

The value of the 2007-08 U.S. citrus crop is up 2 percent from last season, to \$3.22 billion (packinghouse-door equivalent). Total value of production for 2007-08 is lower for the orange, tangelo, and grapefruit crops but higher for the lemon, tangerine and mandarin crops. Orange value of production decreased 4 percent, grapefruit value decreased 15 percent, and tangelo value is down 36 percent from the previous season. Tangerine and mandarin value of production increased 40 percent from last season, and lemon value of production increased 31 percent. Beginning with the 2006-07 season, Temple production and value are included in the early-mid-Navel component of Florida's orange estimates.

Florida's \$1.2 billion (on-tree equivalent) preliminary value of the 2007-08 citrus crop is down 19 percent from the 2006-07 season's revised record value crop of \$1.5 billion. The price per box and on-tree value of production is lower on all varieties. Tangelos suffered the largest decreases with price per box down 69 percent and value of production down 63 percent. The all orange price per box decreased 39 percent, tangerines are down 46 percent, but the grapefruit price per box is less than four percent lower.

Preliminary value is based on that part of the crop priced at harvest, which accounts for all of the fresh fruit and about 40 percent of the processed. Nearly one-half of the processed oranges were priced but the figure for processed grapefruit and tangerines is about one-quarter of the total.

FLORIDA CITRUS:

Value of sales on-tree, crop years 1998-99 through 2007-08

Crop year ^{1/}	Value	Crop year ^{1/}	Value
	<i>1,000 dollars</i>		<i>1,000 dollars</i>
1998-99	1,097,253	2003-04	891,500

2002-03	787,378	2007-08 ^{3/}	1,211,939

^{1/} Excludes lemons beginning crop year 2003-04.

^{2/} Revised.

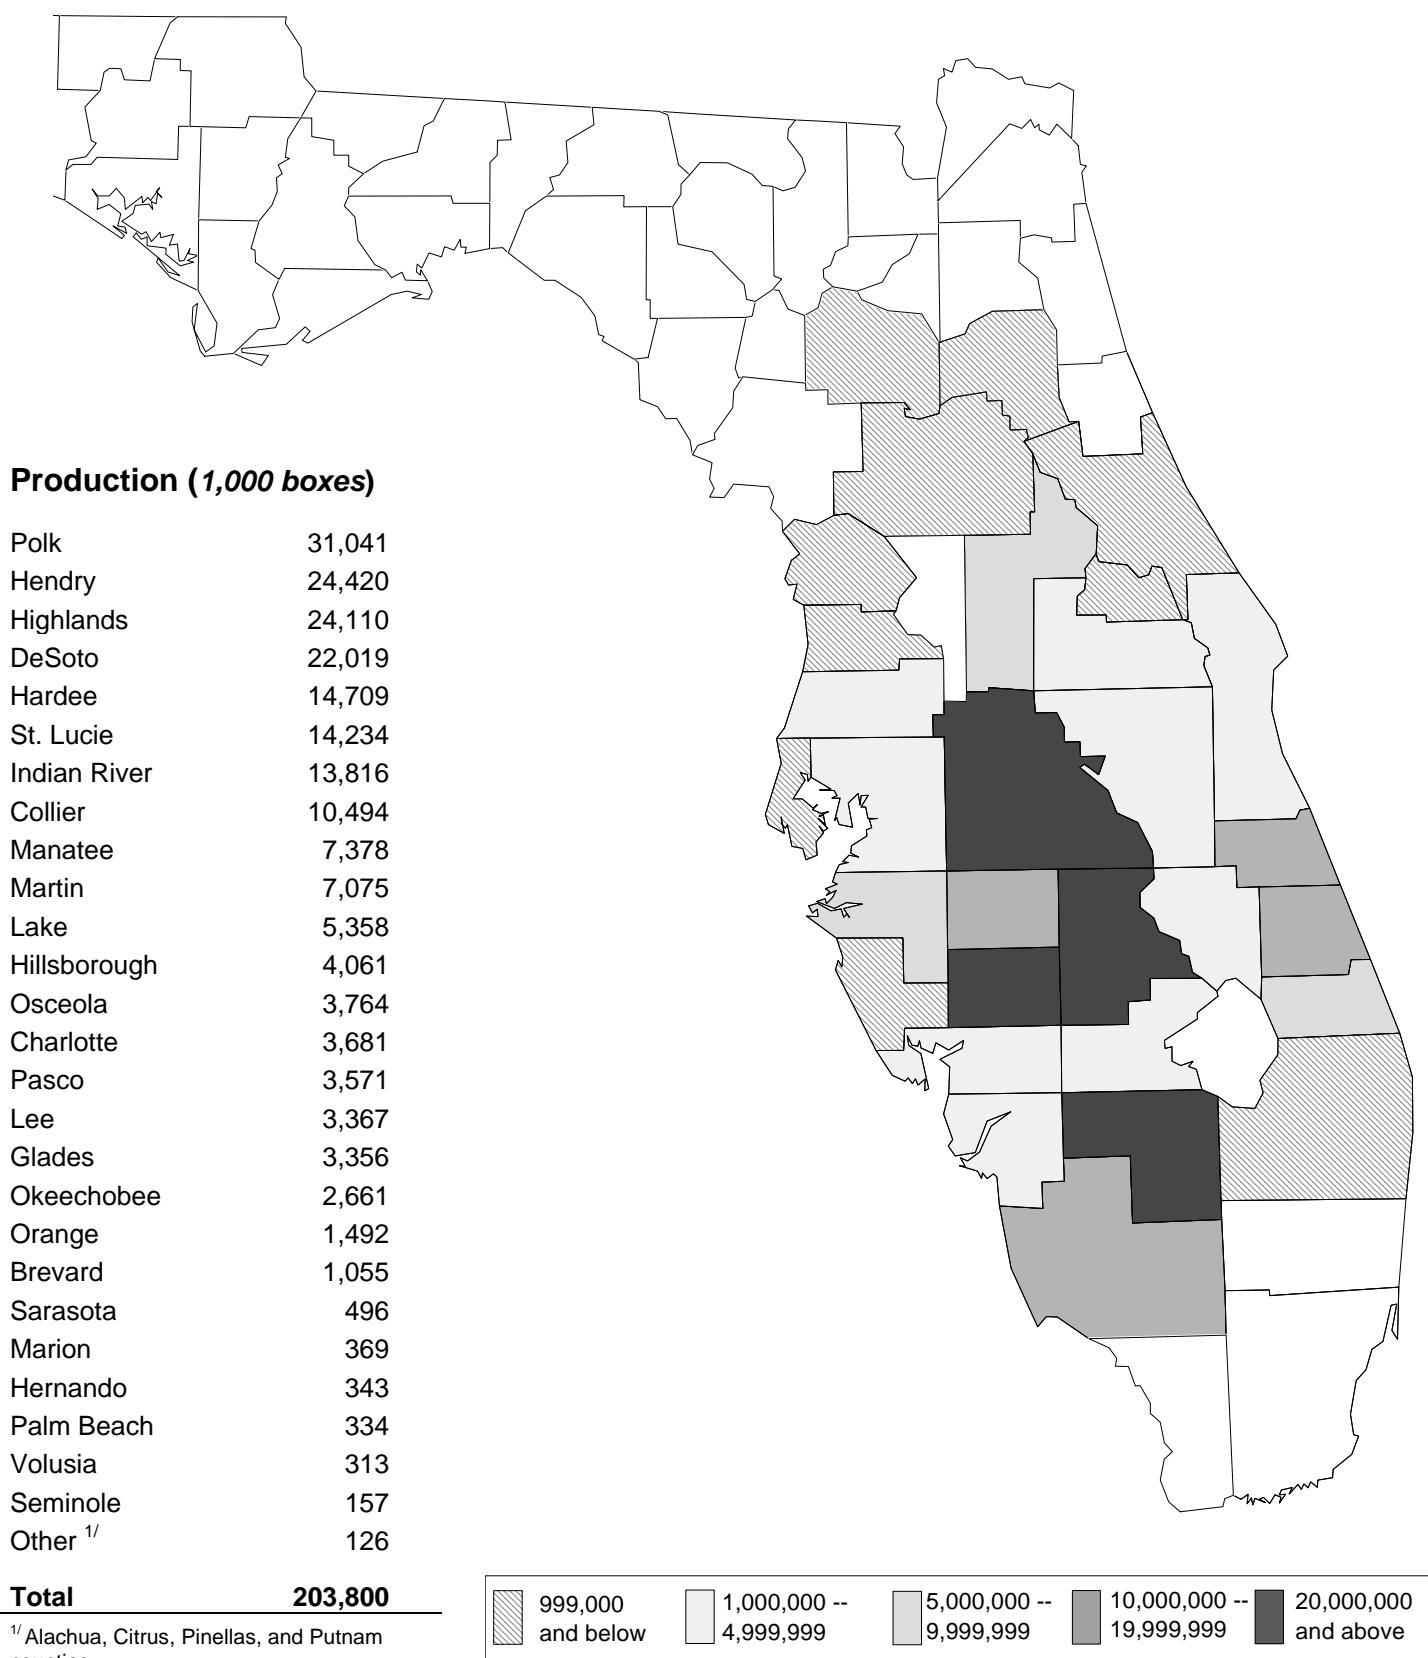

^{3/} Preliminary.

FOREIGN EXPORTS AND FROZEN CONCENTRATE

Fresh fruit exports totaled 14.8 million 4/5 bushel cartons. Japan accounted for the majority of Florida grapefruit. Canada received the most of Florida's orange and specialty fresh fruit exports.

A total of 10.1 million gallons of FCOJ (Frozen Concentrated Orange Juice), and 7.6 million gallons of FCGJ (Frozen Concentrated Grapefruit Juice) were exported in the 2007-08 season. Final FCOJ yield, reported by the Florida Department of Citrus, set record highs for all oranges (1.67274 gallons per box) and late oranges (1.79034), but was lower than the previous season for early-midseason fruit (1.55335). The final tangerine yield (FCTJ) was up (1.47635) and the final grapefruit yield (FCGJ) was down (1.31020).

FLORIDA CITRUS HARVESTING SEASON

AVOCADOS

Total production of avocados has rebounded from the 2005-06 hurricane affected crop and at 1,100,000 bushels is more than twice the amount of last season. Bearing acreage, estimated at 7,000 acres, is up 8 percent. The price per bushel at \$11.00 is lower than the previous nine seasons listed, bringing the total value of the crop to \$12,100,000. More than two dozen minor tropical fruits are grown in South Florida. These varieties, sold mostly on the local fresh market, include annona, banana, carambola (star fruit), Barbados cherry, coconut, guava, jaboticaba, jacfruit, key lime, kumquat, litchi, longan, mango, monstera, papaya, passion fruit, plantain, pummelo, sapodilla, black sapote, mamey sapote, white sapote, and wax jambu.
