

2008-09 SEASON CITRUS HIGHLIGHTS

U.S. AND FLORIDA PRODUCTION

Utilized citrus production for the 2008-2009 season in the United States totaled 12.0 million tons, down almost 7 percent from the 2007-2008 season's 12.8 million tons, and nearly 33 percent lower than the record high production of 17.8 million tons in 1997-1998. Florida accounted for 71 percent of the total, California produced 26 percent, and Texas and Arizona harvested the remaining 3 percent. Arizona's total production was up 4.8 percent. Both fresh and processed utilization were lower in the other states with total decreases of 6.6 percent in California, 7.2 percent in Florida, and 11 percent in Texas.

Production of Florida citrus in the 2008-2009 season was 189.1 million boxes. All categories of oranges, grapefruit, and specialty fruit showed decreases in production except the non-Valencia orange category. A significant contributing factor to the reduced production was lower average fruit per tree in all categories except non-Valencia oranges and Sunburst tangerines. Bearing trees were reduced from the previous season for all fruit types.

The all orange crop production of 162.5 million boxes was down 4.6 percent. Production was 1.3 percent higher for non-Valencia oranges, but 10.3 percent lower for Valencia oranges. All grapefruit production of 21.7 million boxes was 18.4 percent less than the 2007-2008 season's production. Production was also lower for tangerines and tangelos.

TREE INVENTORY

Results of the annual commercial citrus inventory show a decrease of 7,763 acres, or a net change of -1.3 percent. The downward trend lost momentum as new trees were made available to citrus owners and approximately 12,155 acres of new plantings occurred in this one year period, well above the averages of 2006 and 2008. Elimination of diseased trees contributed to the gross loss of 19,918 acres.

CITRUS BOX WEIGHTS

Approximate net weight by fruit type and states

State	Orange	Grapefruit	Tangerine	Lemon	Lime
	(Pounds)				
FL	^{1/} 90	85	95	90	88
CA	75	67	75	76	--
TX	85	80	--	--	--
AZ	75	67	75	76	--

^{1/} Includes Temples and tangelos at 90 pounds.

Of the 30 counties included in the annual citrus inventory, 17 recorded decreases and 13 showed increases in acreage. Martin County experienced the greatest loss in acreage at 4,170, while Brevard County had the highest percentage loss at 18.6. Hardee and Polk had the largest gains and Polk continues to lead with the most acres at 82,629.

Total citrus trees are down almost 2.0 percent from 75,376,100 in 2008 to 74,090,500 in 2009. Of the total, oranges comprise 88 percent, grapefruit 8 percent and the remainder includes specialty and other citrus at 4 percent. Since 2008, bearing trees decreased 2.1 percent to 69,565,700 while nonbearing trees increased 3.4 percent to 4,524,800.

LEADING CITRUS STATES: BEARING ACREAGE AND PRODUCTION, CROP YEAR 2008-09

PRODUCTION BY AREAS AND COUNTIES

Total citrus production in 2008-2009 was down in all Florida commercial citrus production areas from the 2007-2008 season. The Indian River and Southern areas were down the most with decreases of 5.5 million and 5.1 million boxes. The Western area decrease of less than 1 million boxes was the smallest.

Production in the top four counties decreased by 5.6 percent. Together, they produced over 50 percent of all citrus. Polk led with 30.3 million boxes, Highlands moved into second with 23.2 million. Hendry dropped to third with 21.8 million boxes, and DeSoto completed the four with 20.6 million boxes. Leading orange producers were Polk at 27.2 million boxes, followed by Highlands at 22.1 million boxes, and Hendry at 20.5 million boxes. Desoto came in fourth again this season with nearly 20.3 million boxes. The four counties combined accounted for over 55 percent of the State's total oranges. Indian River and St. Lucie far surpassed all other counties in grapefruit production, with more than 14.3 million boxes combined. Together, they accounted for almost 2/3 of the State's grapefruit crop.

The Central area produced 37 percent of the State's tangerines and 33 percent of the tangelos. The Southern area produced the second highest specialty crop, including 26 percent of the tangerines. The Northern area came in third again accounting for 17 percent of specialty fruit.

VALUE

The preliminary value of the 2008-2009 United States citrus crop decreased 15 percent from last season, to \$2.74 billion (packinghouse-door equivalent). Total value of production for 2008-2009 was lower for all states and crops.

Florida accounts for 55 percent of the total, California has 42 percent, and Arizona and Texas combine for the remaining 3 percent. Orange value of production decreased 11 percent, grapefruit value was down 14 percent, and tangelo value decreased 36 percent from the previous season. Tangerine and mandarin value of production was 11 percent lower than last season, and lemon value of production was down 35 percent. Beginning with the 2006-2007 season, Temple production and value were included in the non-Valencia component of Florida's orange estimates.

Florida's \$993.0 million (on-tree equivalent) preliminary value of the 2008-2009 citrus crop was 23 percent less than the 2007-2008 season's revised crop value of \$1.28 billion. The price per box was lower for all fruit types except the Honey tangerines and all tangerines.

Preliminary value is based on that part of the crop priced at harvest, which accounts for all of the fresh fruit and about 40 percent of the processed. Nearly one-half of the processed oranges were priced but the figure for processed grapefruit and tangerines is about one-quarter of the total.

FOREIGN EXPORTS AND FROZEN CONCENTRATE

Fresh fruit exports totaled 12.5 million 4/5 bushel cartons. Japan accounted for the majority of Florida grapefruit. Canada received the most of Florida's orange and specialty fresh fruit exports. A total of 127.82 million gallons of Frozen Concentrated Orange Juice (FCOJ), and 16.15 million gallons of Frozen Concentrated Grapefruit Juice (FCGJ) were exported in the 2008-2009 season.

Final FCOJ yield, as reported by the Florida Department of Citrus, was 1.664452 gallons per box of 42° Brix concentrate, slightly below the record of 1.672737 set in the previous season. The early-midseason portion of the crop set a record at 1.597195 gallons per box. The previous early-midseason high was 1.584139 gallons per box which was attained in 1998-1999. The late crop yielded 1.750745 gallons per box following the record high 1.790343 gallons per box recorded in the previous season. The final FCGJ yield was 1.273682 gallons per box of 40° Brix concentrate and lower than the 1.31020 gallons per box recorded in 2007-2008. The 1.364660 gallons per box in 2006-2007 is the FCGJ record. The final Frozen Concentrated Tangerine Juice (FCTJ) yield of 1.567257 gallons per box of 42° Brix concentrate is the highest recorded since the 1.677269 gallons per box in the 1999-2000 season. The 1.697333 gallons per box in 1998-1999 is the highest tangerine yield recorded.

FLORIDA CITRUS HARVESTING SEASON

AVOCADOS

Production of avocados increased slightly from the previous season by 20,000 bushels, or 2 percent. Bearing acreage is estimated at 7,500 acres, up 7 percent from last season. The price per bushel for the season was \$12.00, up 9 percent from previous year. The total value of crop production was \$13,176,000, up 9 percent from last year. More than two dozen minor tropical fruits are grown in South Florida. These varieties, sold mostly on the local fresh market, include annona, banana, carambola (star fruit), Barbados cherry, coconut, guava, jaboticaba, jacfruit, key lime, kumquat, litchi, longan, mango, monstera, papaya, passion fruit, plantain, pummelo, sapodilla, black sapote, mamey sapote, white sapote, and wax jambu.
