

2009-2010 SEASON CITRUS HIGHLIGHTS

U.S. AND FLORIDA PRODUCTION

Citrus utilized production for the 2009-2010 season in the United States totaled 10.9 million tons, down 8 percent from the 2008-09 season. Florida accounted for 65 percent of the total United States citrus production with 159.3 million boxes of citrus in the 2009-2010 season, California totaled 31 percent, and Texas and Arizona produced the remaining 4 percent.

Florida's total 2009-2010 citrus utilization decreased 16 percent from the previous season. Utilized citrus production in California increased 15 percent for the 2009-2010 season. Utilized citrus production in Texas was up 4 percent. Total citrus production in Arizona was down 27 percent from the previous season.

Florida's all orange production fell 18 percent to 133.6 million boxes. Navel production was 2.3 million boxes, down 23 percent from the previous 2 seasons and the lowest since 1985-1986. Grapefruit utilization in Florida, at 20.3 million boxes, was down 6 percent from the 2008-2009 season's utilization. Honey tangerine production at 2.2 million boxes was up 69 percent from the previous season's 1.3 million boxes, the lowest since 1994-1995.

TREE INVENTORY

Results of the annual commercial citrus inventory show a net decrease of 14,777 total citrus acres, or 3 percent from the 2009 survey, to 554,037 acres of commercial citrus. The gross loss of 25,109 acres was larger and the new plantings of 10,332 acres were smaller compared to the previous inventory.

Since the year 2000, total acreage has declined 33 percent or 278,238 acres. The drop of nearly 12 percent of citrus trees since the 2006 tree inventory is a result of record cold temperatures, citrus canker, greening disease, and commercial development.

Of the 30 counties included in the annual citrus inventory, 23 recorded decreases and 7 showed increases in acreage. Martin County experienced the greatest loss in acreage at 4,386, while Palm Beach County had the highest percentage loss at 55 percent. Polk had the largest gain and continues to lead with the most acres at 83,471. Hendry is second with 66,814 acres while DeSoto and Highlands follow with over 62,000 acres each.

Total citrus trees are down 3 percent from 74,090,500 in 2009 to 72,164,800 in 2010. Hendry remains the leader with over 10.0 million citrus trees, followed closely by Polk with almost 10.0 million, DeSoto with 8.3 million, and Highlands with 8.0 million trees. Of the total, oranges comprise 88 percent; grapefruit, 8 percent; and the remainder includes specialty and other citrus at 4 percent. Since 2009, bearing trees decreased 3 percent to 67,655,800 while non-bearing trees decreased by less than 1 percent to 4,509,000.

LEADING CITRUS STATES: BEARING ACREAGE AND PRODUCTION, CROP YEAR 2009-2010

PRODUCTION BY AREAS AND COUNTIES

Total citrus production in 2009-2010 was down in all Florida commercial citrus production areas from the 2008-2009 season. The Southern and Western areas were down the most with decreases of 13.4 million and 7.4 million boxes respectively. The Northern area's decrease of less than 388,000 boxes was the smallest. The top 5 citrus producing counties were Polk (27.9 million), Highlands (21.6 million), DeSoto (18.0 million), Hendry (16.3 million), and Hardee (13.0 million). Losses were recorded in all counties with the exceptions of Hernando and Orange.

Estimates of county production are prepared from objective survey data used in forecasting citrus crop production. The apportionment of final harvest to the counties is based on bearing trees, an estimate of the average fruit per tree, and the drop and size surveys. Sample size and the distribution of the sample groves around the State used in these surveys are chosen to minimize error in the estimates of production and are not to be considered as accurate for the counties as at the State or area levels.

VALUE

The value of the 2009-2010 United States citrus crop increased 5 percent from last season, to \$2.88 billion (packinghouse-door equivalent). Even though United States citrus production was lower than last season, higher prices for the majority of the citrus crops pushed crop values up. Orange value of production decreased 2 percent from last season while grapefruit value is up 28 percent. Tangerine and mandarin value of production is 33 percent higher than last season and lemon value of production is up 14 percent. Tangelo value increased 23 percent from the previous season.

Florida's \$1.055 billion (on-tree equivalent) preliminary value of the 2009-2010 citrus crop is almost 1 percent greater than the revised value of \$1.047 billion for 2008-2009. The price per box was higher for all varieties. White grapefruit and tangelos rebounded from last season's lower prices and on-tree values more than doubled. The all tangerine value increased 73 percent. Only the orange on-tree values are lower.

Citrus Value of Sales On-Tree-Florida: Crop Years 2000-2001 through 2009-2010

Crop year ^{1/}	Value	Crop year ^{1/}	Value
	<i>1,000 dollars</i>		<i>1,000 dollars</i>
2000-2001	862,031	2005-2006	1,024,610
2001-2002	966,803	2006-2007	1,499,112
2002-2003	787,378	2007-2008	1,283,994
2003-2004	891,500	2008-2009 ^{2/}	1,046,735
2004-2005	754,169	2009-2010 ^{3/}	1,054,716

^{1/} Excludes lemons beginning in 2003-2004.

^{2/} Revised.

^{3/} Preliminary.

(X) Not applicable.

^{1/} Includes Temples and tangelos at 90 pounds.

FOREIGN EXPORTS AND FROZEN CONCENTRATE

Fresh fruit exports totaled 12.4 million 4/5 bushel cartons. Japan accounted for the majority of Florida grapefruit. Canada received most of Florida's orange and specialty fresh fruit exports. A total of 16.0 million gallons of Frozen Concentrated Orange Juice (FCOJ) and 4.4 million gallons of Frozen Concentrated Grapefruit Juice (FCGJ) were exported in the 2009-2010 season.

Final FCOJ yield, as reported by the Florida Department of Citrus, was 1.559677 gallons per box of 42° Brix concentrate, far below the record of 1.672737 set in the 2007-2008 season. The early-midseason portion of the crop finalized at 1.511083 gallons per box. The late crop yielded 1.625245 gallons per box.

The final FCGJ yield was 1.309023 gallons per box of 40° Brix concentrate, up from last season but lower than the 1.31020 gallons per box recorded in 2007-2008.

The final Frozen Concentrated Tangerine Juice (FCTJ) yield of 1.438629 gallons per box of 42° Brix concentrate was lower than last season's final of 1.567257 gallons per box.

FLORIDA CITRUS HARVESTING SEASON

AVOCADOS IN FLORIDA

Production of Florida avocados decreased from the previous season by 170,000 bushels, or 15 percent. Bearing acreage is estimated at 7,400 acres, down 1 percent from last season. The price per bushel was \$15.00, up 25 percent from the previous season, bringing the value of crop production to \$13,920,000.

In Florida, most early season varieties of avocados are West Indian types, whereas midseason and late varieties are mostly Guatemalan-West Indian hybrids or Guatemalan types. Commercial production is primarily in Miami-Dade and Collier counties. Florida avocados have a lower fat content than those from other states and countries, and are typically larger than avocados from California. They are available from June through the end of February.
