

Florida Citrus Harvesting Season

U.S. and Florida Production

U.S. citrus utilized production for the 2012-2013 season totaled 11.2 million tons, down 4 percent from the 2011-2012 season. Florida accounted for 63 percent of total United States citrus production, while California totaled 34 percent, and Texas and Arizona combined produced the remaining 3 percent. Total utilized citrus production was up from the previous year in all citrus reporting States except Florida.

Florida's share of U.S. citrus production was 156.2 million boxes in the 2012-2013 season, down 9 percent from the previous season's 171.0 million boxes. Production decreased for all citrus varieties when compared to last season.

Florida's all orange production decreased by 9 percent to 133.6 million boxes. All grapefruit production is down nearly 3 percent to 18.4 million boxes. Production of Honey tangerines is down 30 percent and early tangerine production is down 18 percent, resulting in a 24 percent decrease in all tangerines. Tangelo production is down 13 percent.

Production by Area and County

Each production area showed a decrease in citrus production compared to 2011-2012 except the Southern area which produced nearly 2.0 million boxes more than the 2011-2012 season. The top 5 citrus producing counties were Polk (24.6 million boxes), Hendry (20.8 million boxes), Highlands (19.1 million boxes), DeSoto (17.9 million boxes), and Hardee (13.9 million boxes). Hendry County had the largest actual increase in production while Polk county production decreased the most. By percentage, Lee County had the greatest increase while Seminole County had the greatest decrease.

Estimates of county production are prepared from objective survey data used in forecasting citrus crop production. The apportionment of final harvest to the counties is based on bearing trees, an estimate of the average fruit per tree, and the drop and size surveys. Sample sizes used in these surveys and the distribution of the sample groves around the State are chosen to minimize error in the State estimates of production and are not to be considered as accurate for the counties as at the State or area levels.

Value

The value of the 2012-2013 United States citrus crop was down 15 percent from last season, at \$3.15 billion (packinghouse-door equivalent). Orange value of production decreased 21 percent from last season while grapefruit value is down 13 percent. Tangerine and mandarin value of production is 22 percent higher than last season and lemon value of production is down 10 percent. Tangelo value decreased 9 percent from the previous season.

Florida's \$1.12 billion preliminary on-tree value of the 2012-2013 citrus crop is 32 percent less than the revised value of \$1.64 billion for 2011-2012. The price per box is higher for tangelos and tangerines but lower for all other citrus varieties. The early tangerine on-tree value increased 37 percent, raising the value of all tangerines 13 percent. All other citrus varieties showed decreases in on-tree value.

Citrus: Florida Value of Sales On-Tree, Crop Years 2003-2004 through 2012-2013

Crop year	Value ¹	Crop year	Value ¹
	(1,000 dollars)		(1,000 dollars)

³ Preliminary.

Foreign Exports

Fresh fruit exports totaled 9.2 million 4/5 bushel cartons. Japan accounted for the majority of Florida grapefruit exports. Canada received most of Florida's orange and specialty fresh fruit exports. A total of 17.3 million gallons of Frozen Concentrated Orange Juice (FCOJ), and 3.6 million gallons of Frozen Concentrated Grapefruit Juice (FCGJ) were exported in the 2012-2013 season.

Frozen Concentrate

Final Frozen Concentrated Orange Juice (FCOJ) yield, as reported by the Florida Department of Citrus, was 1.587680 gallons per box of 42° Brix concentrate. A record FCOJ yield of 1.673141 was set in the 2007-2008 season. The early-midseason portion of the crop finalized at 1.508465 gallons per box. The late crop yielded 1.692050 gallons per box.

The final Frozen Concentrated Grapefruit Juice (FCGJ) yield was 1.218634 gallons per box of 40° Brix concentrate, down slightly from last season's final of 1.324913 gallons per box. A record FCGJ yield of 1.364660 gallons was set in 2006-2007.

The final Frozen Concentrated Tangerine Juice (FCTJ) yield of 1.469707 gallons per box of 42° Brix concentrate was lower than last season's final of 1.586671 gallons per box. A record FCTJ yield of 1.757423 gallons was set in the 1992-1993 season.

Tree Inventory

Results of the annual commercial citrus inventory show total citrus acreage is 524,640, down 1 percent, from the last survey and the lowest in a series which began in 1966. Compared to the previous inventory, the net decrease of 6,853 acres is less with a lower gross loss (15,115), but also fewer new plantings (8,262).

Of the 29 counties included in the survey, 20 recorded decreases in acreage, 8 showed increases, and 1 county remained constant. Martin County, down 1,234 acres, has suffered the greatest loss for 5 straight years and has been declining since 1994. DeSoto County has recorded gains in the last 6 surveys and this year's gain of 929 acres is the most of any county. Polk remains the leader with 81,696 acres.

Orange acreage declined for the ninth consecutive survey to 459,311, replacing the previous record low of 464,918 tallied last year. Grapefruit acreage fell to a new low of 47,656. Specialty acreage continued to decline to a record low of 17,673 and represents only 3.4 percent of the total citrus acreage.

Total citrus trees have declined steadily from the peak in 1998 to 68,973,800. Polk is the leader with over 9.9 million trees, followed by Hendry with 9.5 million, DeSoto with 8.7 million, and Highlands with 7.9 million trees. The total is composed of oranges, almost 89 percent; grapefruit, almost 8 percent; and the remainder, including specialty and other citrus, at nearly 4 percent. Since 2012, bearing trees decreased about 1 percent to 64,474,500 while non-bearing trees decreased almost 2 percent to 4,499,300.

Avocados in Florida

Florida avocado bearing acreage, yield per acre, production, price per bushel, and value of production data are not available for the 2012-2013 crop year due to temporary USDA program cuts. The 2013-2014 production of Florida avocados decreased 14,000 bushels, or slightly more than 1 percent, when compared to the 2011-2012 harvest season. Bearing acreage is estimated at 7,000 acres, down 5 percent from 2011-2012, and the least since the 2007-2008 season. The price per bushel is \$21.89, up 5 percent from the 2011-2012 crop year. Total value of crop production is \$24,437,000, an increase of 4 percent from the 2011-2012 season.

In Florida, most early season varieties of avocados are West Indian types, whereas midseason and late varieties are mostly Guatemalan-West Indian hybrids or Guatemalan types. Commercial production is primarily in Miami-Dade and Collier counties. Florida avocados have a lower fat content than those from other states and countries, are typically larger than avocados from California, and are available from June through the end of February.
