### ACKNOWLEDGEMENTS

The acreage, production, utilization, monthly and season average price, and crop value statistics for Florida are official State and USDA estimates prepared by the Crop and Livestock Reporting Service. Corresponding data for other citrus states are from official reports of the USDA Statistical Reporting Service. Shipment and market price data are from the Marketing Bureau Section and USDA's Agricultural Marketing Service. Canned and frozen pack statistics were compiled by the Florida Canners Association and the National Canners Association. Where data are from other sources, appropriate footnotes appear.

Records of the Citrus and Vegetable Inspection Division of the Florida Department of Agriculture were employed in production and utilization estimates. The Growers Administrative Committee assisted in developing production estimates. The Florida Citrus Commission reproduced this bulletin.

Many producers, shippers, canners, sales agencies, transportation firms, and others associated with the citrus industry voluntarily supplied basic data used to develop these statistics. Their contribution is sincerely appreciated.

## CITRUS SUMMARY

### PRODUCTION

In the crop year of 1963-64 Florida's citrus production totaled 89,550,000 boxes. This was again a drastic reduction caused by the most severe freeze of this century which occurred in December, 1962, and is far below the record crop of 153,740,000 boxes harvested in 1961-62. Florida's 456,000 acres of bearing groves comprised 62 percent of the Nation's citrus acreage and provided 60 percent of the total United States production.

California in 1919-20 accounted for 60.3 percent of the United States production. In 1963-64 production was 35 percent of the Nation's total tonnage with 51,900,000 boxes on 186,900 acres. California's largest crop was reached in 1944-45 when 76,880,000 boxes were produced.

Texas had a phenomenal expansion of bearing citrus acreage from only 600 acres in 1920-21, to 122,500 in 1948-49. Most of this acreage was grapefruit. Then came the freezes of 1949-50 and 1950-51, which reduced acreage to 38,100 acres, but by 1959-60 acreage had increased to 71,000 acres. No estimate of acreage has been made since the 1962 freeze.

Texas production was reduced from the 1945-46 high of 28,800,000 to 500,000 in 1951-52, but by 1960-61 it had increased to 10,300,000 boxes. A freeze in January, 1962, left the trees in such condition that only 740,000 boxes were produced in 1963-64.

Arizona's production in 1963-64 amounted to a record production of 7,150,000 boxes, well above their previous record harvest of 5,850,000 boxes in 1959-60.

### TREE NUMBERS

In the 1963-64 season, there were 30.0 million producing citrus trees growing in commercial groves in the State of Florida. Of these, 22.9 million are orange trees of which 10.4 million, or 45.4 percent, are early and mid-season type. Of the total orange production of 58,300,000 boxes in 1963-64, 27,800,000 boxes, or 47.7 percent, were early and mid-season type (including Temples). Late type orange trees number 12.5 million, or

54.6 percent of the orange tree total, and accounted for 30,500,000 boxes, or 52.3 percent of the orange production.

Of the 5.7 million grapefruit trees, approximately 31 percent are seedy type and 69 percent are seedless type. Seedy type accounted for 6,600,000 boxes, or 25 percent, of a total of 26,300,000 boxes, and seedless type produced 19,700,000 boxes, or 75 percent of the total grapefruit.

Tangerines accounted for approximately 4.0 percent of the total citrus production in 1963-64, with a little less than 1.0 million trees producing 3,600,000 boxes.

Lime trees accounted for 4,100 acres and produced 450,000 boxes in 1963-64.

Tree numbers were based upon the continuing tree count survey.

### NON-PRODUCING ACREAGE

It is estimated that as of October, 1963, there were 282,000 acres of non-producing citrus trees planted in Florida. This consists of 247,000 acres of oranges; 4,400 acres of Tangerines; 9,100 acres of Murcotts; 7,100 acres of Tangelos; 7,600 acres of grapefruit; 5,600 acres of lemons and limes; and 1,200 acres other.

### PRICES

Record prices were received in 1963-64. Oranges, on-tree, all methods of sale returns were \$4.53 per box, while grapefruit returned \$2.29 per box.

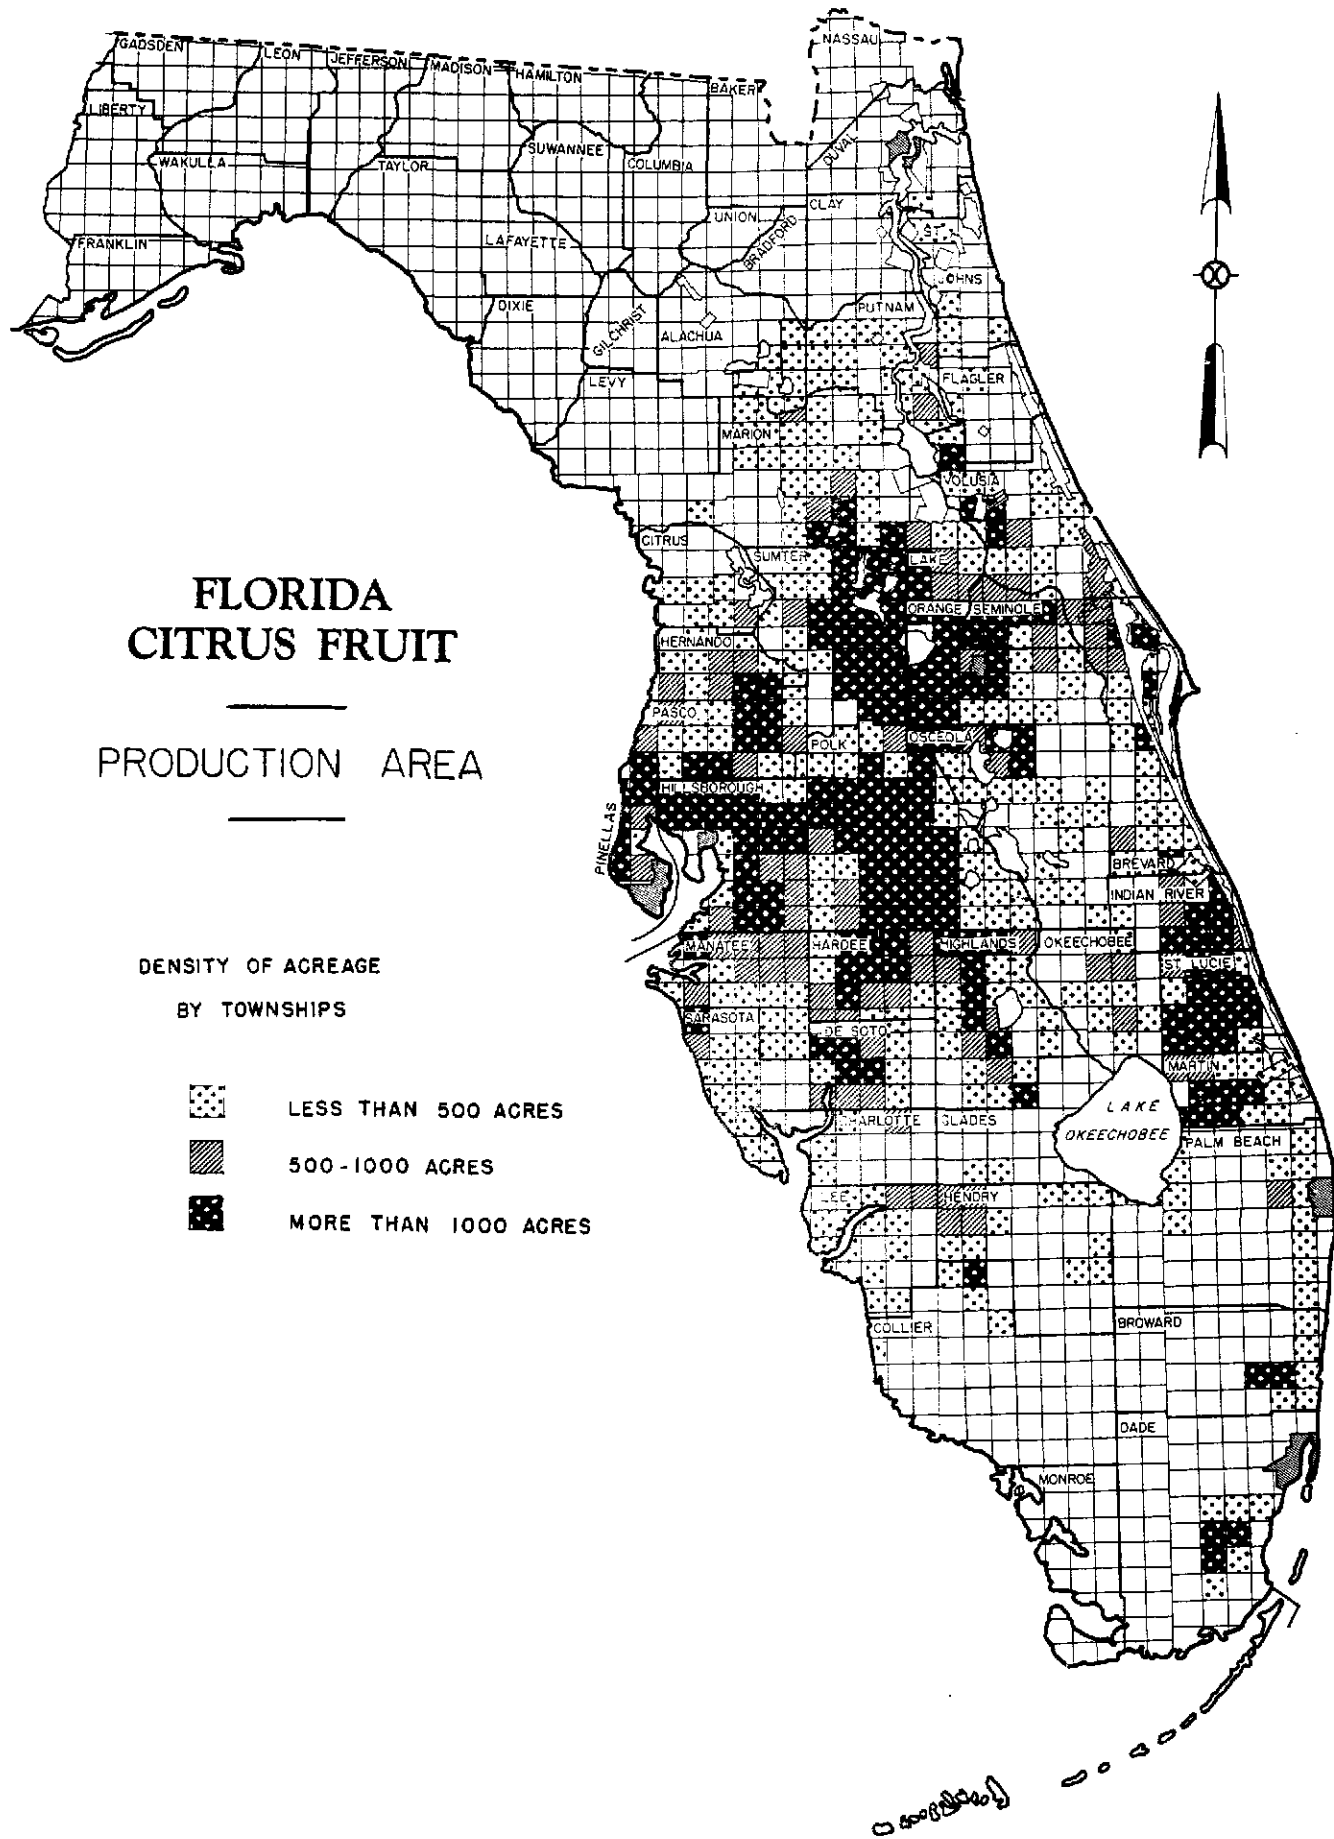

Prices in the post World War II period have varied from the record highs of 1963-64 to the lows of 1947-48, when the on-tree average for oranges was 63 cents, and grapefruit was 26 cents, per box, all methods of sale. During this same period the previous record high for oranges was 1960-61 with an on-tree average of \$2.98 and for grapefruit it was 1949-50 with an on-tree average of \$1.79, for all methods of sale.

### VALUE

Florida, All Citrus: Value of Sales, On-Tree  
Crop Years 1954-55  
through 1963-64

Year	Value	Year	Value
1954-55	\$ 149,717,000	1959-60	\$ 220,021,000
1955-56	198,617,000	1960-61	296,516,000
1956-57	172,580,000	1961-62	247,258,000
1957-58	213,138,000	1962-63	247,785,000
1958-59	289,769,000	1963-64	338,964,000

NOTE - Net contents of box varies. The Florida citrus code defines an equivalent standard box of fruit as 90 pounds for oranges and Tangelos, 85 pounds for grapefruit and 95 pounds for Tangerines. These weights have been used in these statistics for Florida. Texas average weights are 90 pounds for oranges, and 80 pounds for grapefruit. Louisiana oranges average 90 pounds per box. California and Arizona use a smaller box. California weight averages are: oranges, 75 pounds; grapefruit, 65 pounds; and lemons, 76 pounds. Arizona average weights are: oranges, 75 pounds; grapefruit, 64 pounds; and lemons, 76 pounds.
