U. S. Department of Agriculture  
Agricultural Marketing Service  
and  
National Agricultural Statistics Service

### ACKNOWLEDGMENT

The acreage, production, utilization, monthly and season average price, and crop value statistics for Florida as shown in this summary are official estimates of the Florida Agricultural Statistics Service. Corresponding data for other citrus states are from official reports of the USDA, National Agricultural Statistics Service. Canned and frozen pack statistics were compiled by the Florida Citrus Processors Association. Where data are from other sources, appropriate references appear.

Records of the Division of Fruit and Vegetable Inspection, Florida Department of Agriculture and Consumer Services, were used in preparing production and utilization estimates. The Citrus Administrative Committee assisted in assembling these data.

Many producers, shippers, processors, sales agencies, transportation firms, and others associated with the citrus industry voluntarily supplied basic data used to develop these statistics. Their contributions are sincerely appreciated.

This report was assembled under the direction of Robert R. Terry and Candice T. Erick of the Florida Agricultural Statistics Service.

Published January 1989

FLORIDA WEATHER HIGHLIGHTS, SELECTED AREAS AND MONTHS, 1987-88 CROP YEAR

Florida's citrus growing areas experienced very good growing weather throughout the winter of 1986-87 with no freezing weather to cause fruit or tree loss. Rehabilitated trees in the northern and central areas exhibited good growth and bloom was abundant in all areas of the State.

Bloom appeared during the normally expected time, mid-March through mid-April. By late April 1987, weekly rainfall amounts were very low and irrigation was in use throughout all growing areas.

May rainfall amounts were very good and resulted in good fruit set in all areas. Summer rainfall amounts were also very good. By the first of September, cumulative amounts were generally above normal levels in the citrus belt.

Tropical Storm Floyd moved across the State on October 12th but no wind or rain damage to citrus was reported. Rainfall amounts were variable and generally welcome in most areas.

In November, another tropical storm moved up the west coast and crossed the State north of the citrus growing areas. Rains up to 7 inches were reported in the south Florida growing areas. Cool temperatures were widespread by midmonth.

Limited showers and above normal temperatures in December extended over the citrus belt. By the end of 1987, 19 of 24 reporting stations in the citrus belt reported above normal cumulative rainfall amounts for the year.

January 1988 temperatures were about normal. Frost occurred on several mornings without apparent damage. Although February was cold, with below freezing weather on several mornings, no damage was reported.

March and the later spring months were generally warmer than normal with frequent showers to maintain soil moisture.

1987-88 PRODUCTION AND TREE CENSUS

PRODUCTION

Florida's season began with open bloom in most areas by mid-to-late March. There was very little adverse weather to affect growth during the spring and summer.

Total orange production was 138 million boxes, up 15 percent from the previous season's harvest of 119.7 million boxes. This was the highest since the 1982-83 season production of 139.6 million boxes.

Grapefruit production also increased, to 53.85 million boxes from 49.8 million the previous season. This was the highest production since the record high 1979-80 season production of 54.8 million boxes.

Except for limes and lemons, all specialty crops increased in production. Fresh shipments were up for all types.

FCOJ final yield was a record high 1.55342 gallons per box for all oranges with early and midseason oranges yielding 1.48982 and Valencias 1.64573 gallons.

California's orange production at 25,000,000 boxes surpassed the previous season, which was the highest since the 1982-83 season. Grapefruit production at 8.9 million boxes was slightly less than the previous season.

Arizona produced 1,810,000 boxes of oranges in 1987-88 compared to 2,700,000 the previous season. Grapefruit production decreased to 1,500,000 boxes, the lowest level in several seasons.

Texas production of both oranges and grapefruit has steadily increased since the 1984-85 season when freezing temperatures completely destroyed the citrus crop. Oranges increased from 875,000 boxes in 1986-87 to 1,430,000 boxes and grapefruit from 1,925,000 to 3,800,000 boxes in 1987-88.

CITRUS BOX WEIGHTS: Approximate net weight in pounds by fruit type and states

Calif.	75	65	75	76	--
Texas	85	80	--	--	--
Arizona	75	64	75	76	--

1/ Includes Temples and tangelos at 90 lbs.

TREE CENSUS

The Florida Agricultural Statistics Service first began indexing the State's commercial citrus groves on aerial photography as of January 1966. Ground crews identify all the State's groves by fruit type, row spacing, and year in which set. Photo interpreters in the Orlando office then delineate the groves by variety blocks on photo transparencies at a scale of 1 inch to 660 feet. Variety blocks are measured with planimeters to obtain acreage and then indexed by land section.

The inventory was designed for quick and economical updating. Since 1966, the citrus belt has been resurveyed each second winter (1968 through 1988) to determine changes. Photographing begins in November when weather conditions are most favorable and is generally completed in 80 to 90 days. The same three-mile-wide flight lines established in 1966 are photographed on each succeeding flight. Approximately 14,000 square miles of photography is obtained at a 1 to 30,000 scale.

The last statewide survey was conducted as of January 1988. Through 1987, all types of citrus planted totaled 697,929 acres, up 12 percent from the 624,492 acres planted through January 1986. This is the largest two year increase since the tree census program began in 1966. Increases were highest in lower interior counties. Acreage by counties and types is shown on page 27.

Photography for the next survey will begin in November 1989 and field work will update the acreage records as of January 1990.

FLORIDA, ALL CITRUS: Acres in commercial groves as of January 1966 - 1988, with percent changes

Year	Acres	Percent change from previous survey	1966 survey
1966	858,082	--	--
1968	931,249	+8.5	+8.5
1970	941,471	+1.1	+9.7
1972	878,019	-6.7	+2.3
1974	864,098	-1.6	+0.7
1976	852,369	-1.4	-0.7
1978	831,235	-2.5	-3.1
1980	845,283	+1.7	-1.5
1982	847,856	+0.3	-1.2
1984	761,365	-10.2	-11.3
1986	624,492	-18.0	-27.2
1988	697,929	+11.8	-18.7

1987-88 VALUE OF SALES, PRICES AND EXPORTS

VALUE

The preliminary on-tree value of all citrus for the 1987-88 season is a record high \$1.316 billion. This is 40 percent more than the revised 1986-87 season value of \$941 million. The previous record season was \$1.037 billion in 1979-80.

Preliminary value is based on that part of the crop that was priced at harvest, about 30 percent of the total. When all participation plans and cooperative pools are finalized, a revised value is calculated.

Preliminary orange prices increased to \$6.73 per box from a revised \$5.22 for the previous season. Fresh prices increased to \$7.71 from \$6.18 and processing prices to \$6.66 from \$5.14. Total orange value was a record high \$928,519,000, up 49 percent from the revised 1986-87 value of \$624,771,000.

Grapefruit prices increased for all types. The preliminary \$5.48 for all grapefruit is a record high price. Last season's revised price is \$4.98 per box.

Prices for all specialty crops increased from the previous season.

The season average delivered-in price of fruit going into FCOJ as reported by the Florida Citrus Processors Association is \$8.60 per box or \$1.36 per pound of solids. Early-mids averaged \$7.65 per box or \$1.26 per pound solids and Valencias averaged \$9.93 per box or \$1.48 per pound solids.

FLORIDA, ALL CITRUS: Value of sales on-tree, crop years 1978-79 through 1987-88

1982-83	876,777	::	1987-88 2/	1,316,471

1/ Revised. 2/ Preliminary.

FOREIGN EXPORTS

Exports of fresh citrus to countries other than Mexico and Canada was a record high 20,891,000 4/5 bushel cartons, up from last season's 15,864,000 cartons. Grapefruit accounted for 20,676,000 of this total with Japan taking about half or 10,942,000 cartons. Orange exports totaled 139,000 cartons; tangerines 14,000; and Temples 62,000.

A total of 8.7 million gallons of FCOJ were exported, up from the previous season's 7.4 million gallons. Canada continues to be the major market. There were 4.5 million gallons of grapefruit concentrate exported, up from 3.4 million gallons the previous year.

PRICES

All on-tree prices represent the average price received by growers for their fruit by types. Prices are based on records of commercial fresh fruit sales and processed fruit returns. The term "on-tree" relates to fruit value before it is picked and hauled from the grove. Each season, beginning with the first month that three percent of a fruit type is harvested, monthly estimates are computed. Reports from fresh fruit sales organizations and from packers provide data for an average f.o.b. price. Processors report an average spot and cash price for fruit delivered to their plants. From these values, an estimated charge for picking, hauling, and packing is deducted to arrive at an on-tree price. The anticipated box utilization for the month is used to combine the fresh and processing price to obtain an average price for all methods of sales. At the end of the season, monthly price averages are computed and weighted by boxes utilized, to provide the preliminary season average price.

A year later, after most processed products are sold, cooperatives and firms with participation plans report prices of fruit they handled. These prices, combined with the spot and cash prices collected earlier, are weighted together, by varieties, to determine the final processing price received by growers. From this price, charges for picking, hauling, and packing, as estimated by University of Florida economists, are deducted to arrive at the final on-tree price received by growers.

COUNTY PRODUCTION

Estimates of citrus production by counties were prepared from objective survey data obtained from the citrus crop estimates program. Production for Florida has been distributed to counties based on the biennial citrus tree census, limb count survey data adjusted for droppage to end of season, and size data at maturity.

Tree numbers by county which are used in the estimates were obtained from the latest tree census. Data on production are obtained from several objective fruit surveys: limb count, size, and droppage samples. Because of the statistical sampling design, counties with higher production in general have a greater number of fruit samples and, therefore, estimates for these counties can be considered more reliable. Thus, for the same reason, estimates for the production areas are more reliable than for individual counties.

FLORIDA CITRUS: Production of all citrus since 1886-87

History of Florida's Citrus Industry

The citrus tree is a native of the Orient. From there it was carried ever westward by man, to India, to the Mediterranean and on across the Atlantic. Citrus was brought to the Americas by Columbus. When he landed on November 22, 1493, he brought citrus seeds that were planted on the island of Haiti. The first seeds planted on the mainland of the Americas were brought by the expedition of Juan de Grijalva when he landed in Central America between July 12 and July 20, 1518. The exact date of the introduction of citrus trees into Florida is not known, but from a statement made by Pedro Medendez, dated April 2, 1579, it appears that citrus fruits were grown in abundance around St. Augustine at that time. Early settlers in Florida some two centuries later found wild citrus trees scattered over the State. One of the oldest, cultivated groves planted in Florida (Hume, 1926 p.95) is thought to have been the Don Phillippe grove in Pinellas County, planted sometime between 1809 and 1820.

Citrus production in Florida had reached an all time high of more than 5 million boxes when the Great Freeze of 1894-95 almost totally wiped out the citrus industry. It was not until 1909-10 that this level was reached again. Since that time the volume steadily increased. In 1987-88, Florida had 71.4 percent of the Nation's production.

Footnote 2/ for page 32, 1/ for pages 33 and 34. Final Mexican shipments to the U. S. are reported by FAS as a combined total for oranges and tangerines. The total shown on pages 32 through 34 has been broken down proportionally into oranges and tangerines from Plant Quarantine data reported at the time of the crossing. Plant Quarantine releases give separate totals for these two types of citrus. Mexican shipments, through the U.S. to Canada are not included.

1/ Forecast. 2/ One metric ton is equivalent to 2,204.6 pounds. 3/ Includes tangerines and Temples in some countries. 4/ Includes some fruit produced in Swaziland, Botswana, and Mozambique which is marketed through the South African Citrus Board. 5/ Mainly satsumas but also including mandarin hybrids. 6/ State of Sao Paulo only, which apparently accounts for over one-half of Brazil's production. About 120,000 tons of tangerines which are processed are included in the orange table. 7/ Includes tangelos, which account for about half of the total production. 8/ Clementines only.
