## CITRUS SUMMARY

### HISTORY - 1/

The citrus tree is not a native of the Americas. It was introduced by Columbus, November 22, 1493. The first trees were planted on the island of Haiti. They were planted on the mainland of the Americas, in Central America, between July 12 and July 20, 1518, by the expedition of Juan de Grijalva.

The exact date of the introduction of citrus fruits into Florida is unknown. From a statement made by Petro Medendez, dated April 2, 1579, at St. Augustine, it appears that citrus fruits were growing in abundance there at that time, so it is justifiable to assume that they were brought by the first settlers in 1565.

Early settlers in Florida, some two centuries later, found wild citrus groves scattered over the State.

The oldest cultivated grove planted in Florida (Hume, 1926, p.95) is thought to be the Don Phillipe grove situated near what is now Safety Harbor in Pinellas county, planted some time between 1809 and 1820. The Duncan grapefruit, named after Mr. A. L. Duncan, who also lived in Pinellas county, originated from this grove.

The growth of the Florida citrus industry was spasmodic until 1894-95 when the Great Freeze hit Florida. That year production had climbed to 6 million boxes, which was almost totally wiped out by the freeze. Fourteen years passed before Florida equaled this production again.

### PRODUCTION

By 1919-20 Florida had 84,100 acres in bearing commercial groves. This was 30 percent of the total citrus acreage in the United States and on which Florida produced 39 percent of the total United States citrus by harvesting 13,928,000 boxes. When Florida surpassed all other States in citrus acreage

---

1/ See the Citrus Industry by Webber & Batchlor, pages 19, 22, 25, 27.

in 1932-33 with 265,400 acres, it accounted for 46 percent of the United States total acreage, on which were produced 28,010,000 boxes or 38 percent of the United States total citrus production. By 1949-50, Florida's 428,400 acres of producing groves were producing more than 56 percent of citrus produced in the United States. This was 87,960,000 for Florida out of United States total of 156,185,000 boxes. During this period of Florida's citrus history other areas also increased in production, but not at such a fast rate. In 1919-20 California accounted for 60.3 percent of the total United States production. When California became the second State in acreage (behind Florida) in 1932-33, they accounted for 57.7 percent of the total United States production but by 1949-50 had dropped to 35.4 percent of the total United States production with 55,320,000 boxes, which was the second smallest crop from California since 1936-37. California's largest crop was produced in 1944-45 with 76,880,000 boxes produced. Florida's production from 1939-40 to 1949-50 doubled, with the Florida 1949-50 crop of 87,960,000 boxes being approximately 1.6 times as large as California's 1949-50 crop of 55,320,000 boxes.

NOTE: Net content of box varies. For California and Arizona, the approximate average is considered to be 77 pounds for oranges, 65 to 68 pounds for grapefruit. Florida and other States use a larger box with oranges considered to be 90 pounds and grapefruit 80 pounds.

#### TREE NUMBERS

It is estimated that there are slightly more than 27.5 million producing citrus trees growing in commercial groves in the State of Florida. Of these, 19,559,000 are orange trees of which slightly more than 11.3 million, or 58 percent are early and midseason type. Of the total orange production of 58,500,000 boxes in 1948-49, 33,600,000 boxes or 55 percent were early and midseason type. Late type orange trees number slightly more than 8 million, or 42 percent of orange tree total, and accounted for 24,900,000 boxes or 45 percent of the orange production.

Of the 6,402,000 grapefruit trees, 3.6 million or 58 percent are seeded type and nearly 2.8 million or 42 percent are seedless type. Seeded type accounted for 13,000,000 boxes or 51 percent out of a total of 24,200,000 and seedless type produced 11,200,000 boxes or 49 percent of the total grapefruit.

Tangerines accounted for approximately 4 percent of the total citrus production in 1949-50, with a little more than 1.5 million trees.

Lime trees accounted for 4,700 acres and produced 260,000 boxes in 1949-50.

#### NON-BEARING ACREAGE

It is estimated that as of June 30, 1950, there are 54,000 acres of non-bearing citrus trees planted in Florida. This means that for the next four years there will be added to the bearing acreage of Florida citrus an average of approximately 13,000 acres per year, and by 1954 Florida bearing total citrus acreage will be approximately 490,000 acres.

#### PRICES

Prices have varied from the lows of the late thirties, when for the season of 1938-39 the equivalent on-tree from all methods of sale returned 22 cents per box for grapefruit, to the highs of the World War II years, when in the season of 1944-45 an equivalent on-tree return of \$1.70 per box was realized for grapefruit, which was the highest average received in recent years until the past season of 1949-50 when equivalent on-tree return for grapefruit, all methods of sale, climbed to \$1.79 per box. Oranges varied from on-tree equivalents for all methods of sale of 52 cents in season of 1939-40 to a high of \$2.37 in 1945-46 and were \$2.14 per box in the 1949-50 season.
