National Agricultural Statistics Service USDA, Hawaii Field Office 1428 S. King Street Honolulu, HI 96814-2512 Telephone: (808) 973-9588 FAX: (808) 973-2909

Internet Web Site http://www.nass.usda.gov/hi

Frequency: Monthly Release: August 28, 2006

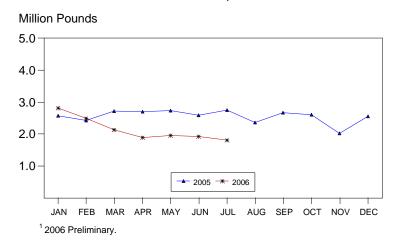

SMALLER OUTPUT CONTINUES IN JULY

Hawaii fresh papaya utilization is estimated at 1.81 million pounds for July 2006, 6 percent lower than last month and 34 percent below a year ago. Year-to-date sales totaled 15.0 million pounds, decreasing 19 percent from the same period last year.

Warm weather with light showers prevailed in July. The longer day length was beneficial for plantings. Irrigation was stepped up for drier areas. Newly planted orchards continued to make favorable progress. Active harvesting was underway.

Papaya growers are expected to receive an estimated 48.0 cents per pound for fresh fruit in July, 6 percent (3.0 cents) below last month, but 33 percent (11.8 cents) above a year ago. Monthly prices for 2006 have been mainly above 2005 levels.

¹ Preliminary.

2005 Papaya Output Lower

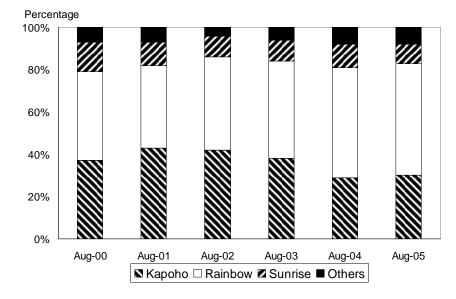

In 2005, papaya output totaled 32.9 million pounds, down 8 percent from 2004 and falling for the fourth consecutive year. Irregular rainfall and some disease problems contributed to lower yields and a smaller harvest. The biotechnology variety Rainbow made up 53 percent of total acres in 2005, up 1 percent from 2004. Rainbow is resistant to Papaya Ringspot Virus (PRV), a virus that devastated the Hawaii papaya industry from 1993 to 1999. Kapoho variety was the standard for the papaya industry for many years; however, Kapoho is susceptible to PRV. Yields of Rainbow are higher during the first vear of harvest

FRESH PAPAYA UTILIZATION & PRICE, STATE OF HAWAII, 1955-2005

compared to the Kapoho variety. In the second year of harvest, yields for Rainbow are comparable to the Kapoho variety. Routine field inspections and rogueing of infected trees kept losses to PRV light. The Kapoho variety comprised 30 percent of total acreage compared to 29 percent the previous year.

TOTAL ACREAGE BY VARIETY, 2000-2005

Annual August surveys since year 2000 show Rainbow and Kapoho have been the major two varieties.

The State's in crop papaya acreage totaled 2,395 up 14 percent from the previous year. Harvested acreage rose 20 percent from 2004 to 1,480 acres, rebounding after three years of decline.

Number of farms in 2005 totaled 205, slightly lower than 2004.

Hawaii county continues to lead with papaya production and accounting for 89 percent of the State's total in 2005.

Value of utilization (fresh and processed) for 2005 was pegged at \$11.2 million, 9 percent below 2004. Papaya price of 34.2 cents per pound was slightly down from last years 34.5 cents per pound.

U.S. Papaya Imports Lower

Fresh papaya imports from foreign sources into the United States totaled 255.9 million pounds in 2005, down 8 percent from the previous year, according to the Department of Commerce. Mexico accounted for 176.8 million pounds or 69 percent of the total. In the last five years, papayas from Belize have steadily increased and contributed almost a quarter of the total imports in 2005.

Total imports for 2005 decreased 7 percent from 2004 to 271.8 million pounds due to less fresh papayas. However, it still comprises the majority or 94 percent of total imports.

World Papaya Production Up 1 Percent

World papaya production totaled 15.0 billion pounds in 2005, up 1 percent from a year ago, according to the Food and Agriculture Organization.

Brazil remained the top producer of papayas growing 3.7 billion pounds followed by Mexico producing 2.1 billion pounds of the world's papaya total. Other contributing countries were Nigeria with 1.7 billion, India with 1.5 billion pounds, and Indonesia with 1.4 billion pounds.
