~ ~ ~ About the Cover ~ ~ ~

Featured on our front cover is "Heritage", taken by Emily Fry-Schutt from Attica, Indiana. This is Emily's fourth year in 4-H and she is eleven years old. This is a picture of the windmill on the Fry Farm in Benton County. Emily also took the picture featured on the back of our cover. This picture is named "Spring Break". Emily said that she took this picture at a state park while on spring break in 2007.

Emily's interest in photography comes from her mother. She stated that her grandfather was also interested in photography, and had his own darkroom that her mother used as well.

We extend a special thanks to the farmers, agri-businesses, extension officials and others who voluntarily provided basic data used to prepare the statistics presented in this publication and to the corps of enumerators who so faithfully collected much of our raw data.

We would also like to thank all of the 4-H photography members that submitted pictures for use in our publication. All of the photos were included on posters displayed at the 2007 Indiana State Fair.

Jay Akridge,
Interim Dean of Agriculture

During the 2007 growing season, Indiana farmers continued to face challenges with a positive attitude, hard work, and hope. Looking back at the 2007 growing season the big increase in cash receipts resulted in some positive outcomes for several sectors of Indiana's Agriculture. The increase in the average value of farm real estate also improved the outlook for farm families. Although farmers bottom-line showed a higher gross income, expenses continued to increase at a record level, especially for purchased inputs. Any optimism which developed from the 2007 growing season was tempered by the planting delays for 2008 and the tragic flooding that affected so many families and farms.

The goal of this publication remains unchanged. We aspire to help the public become better acquainted with and understand the current situation of Indiana's farming community. Hoosier crop farmers should take pride in the fact that Indiana continues to rank near the top in the production of corn, soybeans, popcorn, tobacco, blueberries, peppermint, spearmint, processing tomatoes, and vegetables for processing. Indiana livestock producers helped put Indiana's rank at the top for hogs, chickens, eggs, and turkeys raised. The information in this annual summary is collected from farmers using surveys throughout the year. The voluntary response and cooperation of Indiana farmers, agricultural business firms, USDA Farm Service Agency County staff, Purdue University County Extension Staff, NASDA Enumerators, and others across the state, make this annual summary possible. The Indiana Field Office of USDA's National Agricultural Statistics Service pledges confidentiality of all individual reports.

We are again pleased to feature the pictures from 17 individual 4-H members in Indiana's 2007-2008 Agricultural Statistics Annual Summary. These photographs were exhibited at the 2007 Indiana State Fair.

This is the 82nd edition, which documents Indiana Agriculture in 2007, and is published by the cooperative efforts of USDA's National Agricultural Statistics Service and Purdue University Agricultural Research Programs. The Federal/University cooperative partnership has existed since 1925 and continues to enhance agricultural research programs with State specific statistical projects. It is truly an interesting era in which to be a part of Indiana agriculture. Our office takes great pride in the role they play in serving agriculture with timely, accurate, and unbiased information.

Sincerely,

Greg Preston

Indiana farmers received \$7.78 billion in cash receipts from farm marketings in 2007, 28 percent above 2006. Cash receipts from crops were up 29 percent, and receipts for livestock were 26 percent above the previous year. Marketings of crops at \$5.21 billion, accounted for 67.0 percent of the total cash receipts in 2007 while livestock receipts, at \$2.56 billion, accounted for the remaining 33.0 percent. In the previous year crop receipts accounted for 66.5 percent and livestock 33.5 percent of total cash receipts.

Corn was the leading source of income for Indiana farmers in 2007 and amounted to \$2.71 billion. Soybeans were second at \$1.86 billion and meat animals were third with \$1.05 billion. Poultry and Eggs remained as the fourth leading contributor with \$811 million and Dairy follows with \$659 million. ^{1/} Value of Agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development. ^{2/} A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

^{1/} Value of Agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

The above estimates of Growing Degree Days (GDD) Normals are derived from normal temperatures (1971-2000) at mid-month and the corresponding GDD. For example, a weekly average temperature of 60°F resulted in 84 GDD. The basic formula is: $1/2 (\max T - 50) + 1/2 (\min T - 50) = \text{GDD for one day}$. The maximum temperature is not allowed to exceed 86 degrees F. Negative units are not accumulated.

CROP HIGHLIGHTS

ACREAGE: Indiana's five major field crops totaled 12.2 million acres for harvest during 2007, down one percent from the 2006 harvested acreage. Corn acreage for harvest was 18 percent above a year ago, while soybean acreage for harvest decreased 18 percent. Winter wheat harvested acreage was down 20 percent from a year ago, but all hay harvested acreage was up two percent from the 2006 level. Oat acreage for harvest decreased 43 percent from 2006. Other crops showing harvested acreage changes were processing tomatoes up 8 percent, snap beans for processing and cucumbers for processing both down 6 percent and popcorn up 44 percent. In addition, cantaloupe and sweet corn for fresh market harvested acreage both increased 4 percent from 2006.

YIELDS: The 2007 growing season began with a hard freeze in early April that damaged the winter wheat, hay, berry and fruit crops. Cool, wet soil conditions slowed planting progress throughout April. However, by May 13th, 78 percent of the corn acreage and 39 percent of the soybean acreage had been planted. By this time, planting progress was running ahead of the 5 year average pace for both crops. By May 27th, 99 percent of the corn acreage was planted and 89 percent of the soybean acreage was planted. Soils began to dry out in late May and progressively got drier. By June 17th, 86 percent of the topsoil was rated short or very short. Soils remained dry throughout the summer especially in many eastern, central and southern portions of the state. Hay and wheat yields suffered due to the hot, dry summer weather. Harvest of corn and soybeans began the first week

of September and ran ahead of the 5-year average pace until most of the crop was harvested by early November. The average yield for corn was 155 bushels per acre, 2 bushels below the 2006 yield, but the 4th highest on record. The average yield for soybeans was 45 bushels per acre, 5 bushels below the 2006 yield of 50 bushels per acre. The average yield for winter wheat at 57 bushels per acre was 12 bushels below the previous year's yield of 69 bushels per acre. The average oat yield at 55 bushels per acre was down 25 bushels from last year's record yield of 80 bushels per acre. All hay yield at 2.34 tons per acre was 1.05 tons lower than the 2006 yield. Popcorn averaged 4,200 pounds per acre, up 100 pounds from the 4,100 pounds per acre produced a year earlier.

PRODUCTION: Corn produced during 2007 was 987.4 million bushels, 17 percent above the 2006 level of 844.7 million bushels. Soybean production was 210.6 million bushels, 26 percent below the 284.0 million bushels produced a year earlier. Winter wheat production decreased 34 percent from a year earlier, to 21.1 million bushels. Popcorn production totaled 289.8 million pounds, 47 percent above the 2006 level. Oat production of 440 thousand bushels was 61 percent below the 1.1 million bushels produced in 2006. All hay production, at 1.5 million tons, decreased 30 percent. Peppermint production decreased 39 percent, and spearmint production decreased 13 percent from 2006. Apple production decreased 40 percent to 33.0 million pounds. Blueberry production totaled 1.6 million pounds, a 53 percent decrease from the previous year.

BIOTECHNOLOGY VARIETIES

The National Agricultural Statistics Service conducts the June Agricultural Survey in all States each year. Randomly selected farmers across Indiana are asked if they planted corn or soybean seeds that, through biotechnology, are resistant to herbicides, insects, or both. Conventionally bred herbicide resistant varieties were excluded. Insect resistant varieties include only those containing bacillus thuringiensis (Bt). Stacked gene varieties include those containing biotech traits for both herbicide and insect resistance.

The total value of the four major species of livestock and poultry on Indiana farms January 1, 2008 (December 1, 2007 for swine and chickens) amounted to \$1,320.9 million, up 5 percent from a year earlier.

CATTLE inventory numbers, at 890,000, were down 1 percent from January 1, 2007 and value per head, at \$1,110 was \$110 above the previous year. Total cattle inventory value, at \$987.9 million, increased 10 percent from the \$900.0 million last year. Cows and heifers that have calved totaled 400,000 head, unchanged from a year earlier. Of this total, 234,000 were beef cows, and 166,000 were milk cows, both unchanged from the previous year.

HOG AND PIG numbers (December 1, 2007), at 3.70 million, were up 10 percent from a year earlier. The average value per head decreased from \$91.00 in 2006 to \$76.00 in 2007. This lowered the total inventory value to \$281.2 million,

8 percent below a year ago. Indiana remained in fifth place in the nation for the number of hogs on hand December 1, 2007.

Total **SHEEP** inventory, at 52,000 head, for January 1, 2008 was down 2 percent, compared to a year earlier. Breeding sheep totaled 46,000 head. Average value per head at \$194.00, was down \$1.00 from 2007. Total inventory value at \$10.1 million was 2 percent below the previous year.

Total **CHICKEN** inventory, excluding broilers, on December 1, 2007, at 32.1 million birds, was up 1 percent from last year. With this inventory, Indiana held on to third place in the nation for total chickens, excluding broilers, and remained in third position for hens and pullets of laying age (24.4 million). The total value of the chicken inventory was \$41.7 million, up 10 percent from 2006. The value per bird increased \$0.10 from the previous year to \$1.30.

HOGS AND PIGS

The total pig crop in 2007 was 8 percent above the pig crop in 2006. Sows farrowed during the year increased 7 percent from the previous year, while litter rates increased 1 percent to 8.96. A \$1.10 increase in average price per hundredweight brought a 9 percent increase in cash receipts for 2007. Gross income of \$778 million (cash receipts plus value of home consumption) increased 9 percent from a year earlier.

COUNTY HIGHLIGHTS

COUNTY HIGHLIGHTS

The following pages of county statistics represent the results of a survey of over 11,000 farm operators following the 2007 harvest season. In addition to these data are selected items of interest from the 2000 U.S. Population Census, 2002 Census of Agriculture, and 2006 Cash Receipts information from the Bureau of Economics Analysis. The County Highlights section summarizes the importance of agriculture to each and every Indiana county while comparing the magnitude of importance across counties.

Planted acreage for hay is represented by three dashes because this category is not estimated, planted acreage and yield for popcorn are represented by three dashes because these categories are not surveyed; in all other places the three dashes represent zero for that county. An asterisk signifies that the county has data for this item, but it cannot be disclosed for confidentiality purposes. The 2002 Chicken data from Census includes only layers twenty weeks old and older.

Below is a list of comparable items at the state level.
