In this 2021-2022 annual issue of the “Indiana Agricultural Statistics” publication you will find information about Indiana’s entire agricultural industry. This is the 96th edition and is published by the cooperative efforts of Purdue University and USDA’s National Agricultural Statistics Service. This year’s edition will be the eighth edition that will be published and available from a free mobile app created by Purdue University. The app is available for Apple iPhone, iPad and iPod touch as well as Android users. It can be obtained through iTunes, Google Play and Amazon. Links to those sites where the app can be downloaded are in Purdue Extension's [The Education Store](#) or use the Quick Response Code (QRC) located on page 132 in this book.

We are again pleased to feature the photography talents of 18 individual 4-H members within Indiana’s 2021-2022 Agricultural Statistics Annual Summary. These photographs, exhibited at the 2021 Indiana State Fair, provide a glimpse of Indiana’s agriculture from future farmers’ perspective. We are grateful to all the 4-H members who submitted their photos for publication.

Data collection for the 2022 Census of Agriculture is upon us. The Census questionnaires will be mailed at the end of 2022. NASS will ensure that the data is accurate. The Census is your opportunity to tell the story of agriculture for your county, state, and the nation. The Census closes one book, yet it opens another. It sets the stage for telling the agricultural story for the next five years. The Census tell the most comprehensive story of what happens on the land. Some of you may have already received the Census and completed it. I thank you for taking time to fill it out and returning it.

This data is used to provide facts to decision makers that determine the future of Indiana's agricultural industry. The goal for this publication remains unchanged. It is to provide the public with data to help them understand the current situation of Indiana’s farming community and future opportunities. While we strive to exceed this goal, the Indiana Field Office of USDA's National Agricultural Statistics Service, assures that all individual reports and business data are held in the strictest confidence. We take every action possible to protect your data.

Indiana agriculture continues to be a growing segment of the State’s economy, with Indiana ranked in the top ten nationally for farm receipts. Hoosier farmers should take pride in the fact that even with adverse weather conditions, rising production expenses and prices, Indiana agriculture continues to thrive. Indiana continues to rank near the top nationally in the production of corn, soybeans, popcorn, blueberries, peppermint, spearmint, processing tomatoes, fresh market melons, and vegetables for processing. Indiana livestock producers put our state’s rank at the top for hogs, chickens, eggs, and turkeys.

This Federal/University cooperative effort has existed since 1925 and continues to enhance the opportunity for agricultural research programs for State specific statistical projects in support of agricultural researchers and decision makers. Some of those projects include Agronomic Survey of Indiana Corn and Soybean Growers, Plant Disease and Fungicide Use Survey, and Timber Price Survey. Results of these special research efforts are published by the individual research programs. Results from these special surveys are not a part of this publication but please feel free to contact us for reference to those researchers for additional information.

Thank you for the opportunity to serve the agricultural community, with your help in providing timely, accurate, and unbiased data. Please let us know your comments and suggestions.

Sincerely,

Nathanial Warenski
State Statistician
