THE 1946 CROP SEASON

The yields per acre of major crops in Indiana for 1946 were above the 1935-44 average. The increase was 21 percent for corn, 24 percent for wheat, 27 percent for oats, ten percent for soybeans, and five percent for rye and hay. Pasture condition from May to September averaged 11 percent above usual.

The greater increases for most of the grain crops over pasture and hay suggests that much of the gain was due to improved varieties, heavier and more widespread use of fertilizer, and better culture, rather than to weather.

The fall of 1945 brought higher than average precipitation. Yields of wheat above average are usually associated with fall rainfall below average. The heavier than average rainfall of May and June is also usually not associated with yields above average. However the fall rains enforced late seeding of wheat thus minimizing inroads of Hessian fly, and there was no widespread infection of rust and scab to be intensified by the moisture of late spring. Wheat made high yields of good quality grain generally. The Southwest district showed less gain over average than the remainder of the state.

For the third year May rains made early planting of corn impracticable except for some extremely early planting. After May 20 there were three weeks very favorable for farm work. Corn and soybean planting was mostly done in this period. The next three weeks were wet and warm. This made some difficulty in wheat and hay harvest, but promoted crop growth. For the next six weeks rainfall was below normal and corn on lighter ground in the northern part of the state was severely damaged. The absence of extreme high temperatures prevented the damage from becoming widespread. Copious rains fell in mid-August. These were especially heavy in the south and resulted in bumper corn yields there. Temperatures only normal for the remainder of the season enabled growing crops to escape further drought damage even though precipitation was below average each week till mid-October. There were some spots of frost August 30 but no measurable damage. On September 30 frost killed foliage over much of the state, but corn stalks still remained alive. Cold sufficient to kill hardy weeds in soybean fields in the Southwest district did not arrive till near November 1. Combining of beans and some picking of corn was under way when mid-October rains stopped operations. These rains were helpful in germinating fall sown grains in dry seed beds, and interrupted harvest operations only briefly. Temperatures in late October were much above normal.

The high yields which may be attributed to weather, resulted more from the timeliness of rains and moderate temperatures than from abundance of moisture.

The tree fruit crops were rather spotted as a result of damage to buds by a fall of wet heavy snow on April 12th. Complete killing resulted in some orchards, while others had some trees injured and others escaped. Sometimes only part of a tree was unable to make a set of fruit. Production as a percentage of a full crop was 60 for commercial apples, 57 for pears, 58 for grapes and 53 for peaches. Strawberries yields per acre were only 82 percent of average.

The season was generally favorable for truck crops. All except snap beans exceeded average yields by from four to 64 percent. Of the fresh market crops cantaloups led with 56 percent more than average, with water-melons close by with 52 percent. Other fresh market crops and processing crops were from 25 to 33 percent better than average. Mint crops however exceeded average yields by only four percent.

Tobacco again exceeded former yields about 35 percent. Ample late moisture and heavy fertilization to make the most of allotted acreages are the principal reasons.

Potatoes made far better than average yields both on acreage for home use and for market. Really phenomenal yields were reported by many muck farms which were not adversely affected by the drought which damaged nearby corn. Growers also give credit to superior new insecticides for much of the gain.

The fall of 1947 was favorable for the outlook for fall sown grains. Though dry early, mid-October rains followed by high temperatures permitted these crops to enter the winter in excellent condition.

LIVESTOCK SUMMARY—JANUARY 1, 1946

INDIANA

The numbers of hogs, and of chickens and turkeys on Indiana farms were larger January 1, 1946 than a year earlier. All other species of livestock decreased in numbers during the year.

Horses estimated at 203,000 head decreased 12 percent in 1945. The reduction in numbers seems likely to continue as the current colt crop would maintain a horse population of probably not more than two-thirds the present number, and there are still sales of horses from the state as well as the losses by death. The value per head at \$53 is eight dollars lower than a year ago, and the lowest since 1900.

The estimated 25,000 mules is 26 percent below last year. The value per head at \$87 is seven dollars lower than a year ago.

The number of cattle decreased three percent to 1,836,000 head. The number of cows kept for milk decreased five percent to 790,000. Yearling heifers being kept for milk cows decreased eight percent to 165,000. There was about a two percent increase in the number of calves both for milk stock and others. Values of cattle per head are higher than a year ago with milk cows up to \$113 from \$100, and other cattle six dollars per head higher in spite of the larger proportion of calves. Value per head of all cattle is now \$84.20 instead of the \$75.60 of last year.

The number of hogs is 4,271,000 or seven percent larger than the revised number of last year. The spring pig crop of 1945 was 3,585,000 or eight percent smaller than the previous year, but the fall crop of 3,336,000 was five percent larger than the previous fall. The total of 1945 pigs of 6,971,000 was only about one percent smaller than the 1944 crop. Sows for 1946 spring farrowing are estimated at 586,000 or 11 percent more than in 1945. The value per head of all hogs is now \$22.10 instead of the \$18.10 of a year ago.

Stock sheep decreased 11 percent in 1945 to 452,000 head. The 1945 lamb crop numbered 428,000, which was 109 percent of the breeding ewes. Wool shorn in 1945 was 3,648,000 pounds from 493,000 fleeces. Sheep and lambs on feed January 1 numbered 185,000 this year and 136,000 a year ago. The value per head of all sheep January 1, 1946 of \$11.10 where a year earlier it was \$9.80.

Hens and pullets of laying age increased about one percent to 15,790,000. Other chickens increased 65 percent to 3,259,000. The number of all chickens January 1 of 19,049,000 is up 8 percent from last year. The average value per head is unchanged at \$1.16. The number of turkeys January 1 was 110,000, an increase of 29 percent. Most of this increase was breeding hens. Value per head is \$5.70 where last year \$5.50.

UNITED STATES

The number of livestock on farms continued to decline during 1945 but at a less rapid rate than during 1944. Numbers of horses, mules, cattle and sheep declined but hogs increased. Poultry numbers also increased. During 1944, numbers of all species of livestock and of poultry declined.

In terms of animal units which allow for differences in size and feed requirements of the several species, livestock numbers on January 1, 1946 were 3 percent smaller than on January 1, 1945 and about 8½ percent below the record high numbers of January 1, 1944. In terms of feed grain consuming units, numbers were only a little lower than a year earlier, the increase in hog numbers about offsetting the decreases in other species; but including chickens the total was a little larger than a year ago. In terms of hay and pasture units, the total was 4 percent below a year earlier.

The total value of livestock on farms January 1, 1946 of 8,923 million dollars was 9 percent higher than a year earlier and only slightly below the all time record high value of January 1, 1943. The values per head of horses and mules continued to decline but those of all other species, as well as of chickens were higher than a year earlier, with turkeys unchanged.

Compared with a year earlier, the supply of feed grains on January 1 per animal unit of livestock, including chickens, was about 5 percent smaller than a year earlier, but much larger than two years ago. The supply of hay per unit was much larger than a year earlier with hay stocks up 7 percent and hay consuming units down 4 percent.

The declines in livestock numbers in 1945 may be ascribed to varying causes. In the case of horses and mules it was a continuation of the downward trend in evidence for many years and at an accelerated rate. With cattle it was apparently a continuation of the downward movement of the cattle number cycle that started in 1944, with little evidence of liquidation. In the case of sheep, however, the sharp decline indicated a continuing liquidation of breeding flocks. The increases in hogs and poultry reflected the more favorable feed situation during most of 1945 and the favorable relationship between feed prices and livestock, poultry and egg prices.

The downward movement of the cattle number cycle reflected the record slaughter of cattle and calves in 1945 and appears to be an orderly adjustment of cattle numbers from a record peak to a level better related to average feed production and to a possible decreased demand for beef and veal and for dairy products in the post-war period. It is significant that most of the decline this year was in milk stock—cows, heifers and heifer calves—and not in cattle kept mainly for beef production.

The moderate increase of 4 percent in hog numbers was due to the larger fall pig crop in 1945, since the spring pig crop was smaller than in 1944. In relation to population, present hog numbers are low compared with those in the pre-drought period of 1930-34.

The decrease in sheep numbers in 1945 was not so large as in 1944, but most of the decrease in 1945 was in breeding ewes one year old and over, which will be reflected in a sharp drop in the 1946 lamb crop. Stock sheep numbers are now at the lowest level since 1926.

The decline in work stock numbers was relatively the largest—6½ percent for any year since numbers started to decline nearly 30 years ago. The colt crop in 1945 was down 25 percent from a year earlier with the number of colts raised the smallest for all years for which there are records. The low level of horse values in relation to those of other livestock offers no encouragement to colt raisers.

The number of both chickens and turkeys increased during 1945, with chickens on January 1, 1946 the third largest on record and turkeys the largest. These high numbers are a result of the large numbers of both chickens and turkeys raised in 1945.

¹ Average number on farms during year, heifers that have not freshened excluded.

² Excludes milk sucked by calves and milk produced by cows not on farms.

TABLE XVIII. DISPOSITION OF MILK PRODUCED ON INDIANA FARMS,
1935-1944

Year	Milk fed or consumed on farms where produced				Milk sold or utilized in preparation of dairy products sold from farms				
	Fed to calves	Consumed in the farm household		Total used on farms	In farm-churned butter sold	In wholesale deliveries to plants, dealers, etc.		In retail sales of milk and cream by farmers ¹	Total utilized in products sold
		As milk or cream	as farm butter			As Cream	As Milk		
				Million pounds					
1935	76	393	128	597	51	1,120	1,075	206	2,452
1936	78	386	99	563	37	981	1,242	190	2,450
1937	77	389	88	554	29	925	1,262	174	2,390
1938	78	389	88	555	29	1,010	1,406	168	2,613
1939	76	385	70	531	22	956	1,513	158	2,649
1940	77	384	58	519	20	898	1,638	150	2,706
1941	86	367	54	507	18	860	1,905	145	2,928
1942	92	369	42	503	13	650	2,251	140	3,054
1943	86	325	40	451	11	602	2,260	130	3,008
1944 ²	94	329	37	460	10	522	2,380	120	3,032

¹ Approximations based chiefly on population in small towns and rural areas where most families purchase their milk from local farmers.

² Preliminary.

TABLE XX. PRODUCTION OF MANUFACTURED DAIRY PRODUCTS IN INDIANA, BY MONTHS, 1944

Manufactured Product	No. of Factories Reporting	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Total 1944
(Thousand Pounds)
