The 1958 Crop Season in Indiana

THE HARVESTED ACREAGE of the principal crops in Indiana in 1958 was about 1 percent less than in 1957 and nearly 5 percent less than the 1947-56 average. Farmers placed more land in the Soil Bank in 1958 than in 1957 and, like 1957, some land was idled during the season because of flooding. The 1958 planting season was reasonably favorable and most farmers were able to plant their crops according to earlier plans, but lost acreage due to flooding; while in 1957, excessive rainfall from April to July prevented planting. Rains near mid-June were particularly heavy across the northern half of the state and caused major floods along the larger rivers and streams. Water was also left standing in many upland fields and in some instances rains came so hard as to cause much erosion damage.

Indiana crop yields as a whole in 1958 were 20 percent above the ten-year average while in 1957 they were 8 percent above. Record yields per acre of corn, soybeans and wheat and record tying yields of oats and rye were attained despite excessive rains and flooding in early summer.

Above average precipitation in July and August interfered with harvest of small grains and hay but provided ample moisture for all growing crops and pastures.

Weather during the fall months was favorable for corn and soybean harvest, and the moisture content of corn in storage was not a serious problem as it was a year earlier.

Indiana farmers harvested 4,403,000 acres of corn in 1958, which is the same as in 1957 but 5 percent less than the ten-year average. Even though the harvested acreage of corn is one of the smallest since 1900, total production of 277,389,000 bushels is the second largest production on record, being exceeded only in 1956, when there was a somewhat larger acreage.

The yield of 63.0 bushels per acre is an all time record.

There were 1,281,000 acres of wheat harvested in 1958, which is the same as a year earlier but 14 percent less than the ten-year average. While excessive rainfall during July and August caused some shatter and loss of grain, wheat yields averaged 32.0 bushels per acre as compared with the previous record of 30.5 bushels in 1954 and 1956 and the ten-year average of 24.6 bushels. The yield of oats at 51.0 bushels per acre equalled the record yield of 1955 and was made on 902,000 acres harvested. The harvested acreage is 12 percent less than last year and 29 percent less than average.

The acreage of soybeans harvested for beans in 1958 at 2,205,000 is a new all time high record. The yield per acre at 26.5 bushels per acre is two bushels above the previous record of 24.5 bushels set in 1957 and 4.2 bushels

above average. The 58,432,000 bushels of soybeans produced is 10 percent more than produced in 1957 and 50 percent more than average. Soybeans are the only major crop with a larger acreage in 1958 than the previous year.

The acreage of hay has been declining gradually and the yield per acre has been increasing at a rate almost sufficient to offset the declining acreage. Production of hay in 1958 amounted to 2,446,000 tons which is 5 percent less than last year and 7 percent less than average.

The ample moisture supply in 1958 allowed fruit to attain good size and provide better than average crops. Commercial apple production amounted to 1,628,000 bushels which is 1 percent more than last year and 14 percent above average. Peach production of 500,000 bushels is 55 percent more than in 1957 and 20 percent above average.

List of Available Reports

The Indiana Crop and Livestock Reporting Service publishes official estimates of crop and livestock production, prices received and paid by farmers, and various other special reports. A list of the more important reports and the approxi-

mate date of release is shown in the table below. These reports are free and may be obtained by writing to Agricultural Statistician, Purdue University Agricultural Experiment Station Annex, Lafayette, Indiana.

NAME OF REPORT	FRE- QUENCY OF REPORT	APPROXI- MATE DATE AVAIL- ABLE
I. Crop Reports		
1. Intentions to Plant	Annual	March 20
2. General Crop Report	Monthly	12th of month
3. Annual Crop Summary	Annual	December 20
4. Grain Stocks		
a. On Farms	Quarterly	12th of month
b. Off Farms	Quarterly	25th of month
II. Livestock Reports		
1. Livestock on Farms, Jan. 1	Annual	Feb. 17
2. Cattle on Feed, Jan. 1	Quarterly	17th of month
3. Pig Crops, March 1	Quarterly	21st of month
4. Livestock Slaughter Report	Monthly	30th of month
III. Dairy Reports		
1. Cows Milked and Milk Production	Monthly	12th of month
IV. Poultry Reports		
1. Egg Production	Monthly	12th of month
2. Commercial Hatchery Report	Monthly	20th of month
3. Broiler Chick Placements	Weekly	Wednesday
V. Price Reports		
1. Prices Received by Farmers	Monthly	1st of month
2. Prices Paid by Farmers for Feed	Monthly	1st of month
3. Prices Paid by Farmers Other Items	Quarterly	1st of month
VI. Weather Crop Reports	Weekly Apr. 1-Oct. 1	Tuesday

Livestock Summary January 1, 1958 Indiana

The January 1 inventory of livestock and poultry on Indiana farms included larger numbers of hogs, sheep, chickens and turkeys than a year earlier. Cattle numbers were below those of a year ago while the number of horses and mules was the smallest of record.

CATTLE numbers at 2,217,000 head were 2 percent below the record high of the two preceding years. This is the sixth successive annual inventory in which all cattle numbers have exceeded 2 million head. A further reduction in **MILK COW** numbers occurred during the year. The January 1 total of 570,000 **COWS** and **HEIFERS** over 2 years old represents a decline of 4 percent during the year and is the smallest January 1 number on Indiana farms since 1899.

HOG numbers were 1 percent larger than a year earlier and totalled 4,474,000 head. **SOWS** and **GILTS** made up a larger proportion of the January 1 total, reflecting an increase in spring farrowing intentions as well as a long term trend of earlier farrowing and earlier marketing. Other hogs 6 months old and older comprised 9 percent of the inventory.

SHEEP and **LAMB** numbers were 6 percent larger, and the 582,000 head included increases in both Stock Sheep and Sheep on feed. Stock Sheep numbers totalled 482,000 head, the largest number since 1945. Sheep and Lambs on feed numbered 100,000 head, the largest number since 1949.

HORSE and **MULE** numbers decreased 9 percent during the year, and the combined total of 37,000 head was the smallest for Indiana since records were started in 1867.

The inventory of **FARM CHICKENS** was 1 percent larger than a year earlier and included 13 percent more hens but 3 percent fewer pullets. **TURKEYS** on hand January 1 totalled 55,000 head, an increase of 20 percent over the January 1, 1957 level.

The aggregate value of all species of **LIVESTOCK** was \$403 million for January 1. This is \$59 million or 17 percent above the preceding year. The combined value of **CHICKENS** and **TURKEYS** (excluding broilers) totalled \$17 million. This was nearly \$1 million below last year and was due to lower per-head values for both chickens and turkeys. The average value per head was higher for all species, except poultry. Cattle values at \$118 per head were \$16 higher. **MILK COW** values averaged \$177 per head and were \$20 higher. **HOGS** averaged \$28.60, an increase of \$5.60 per head. Stock sheep averaged \$17.20, a gain of \$2.70 per head. **HORSE** and **MULE** average values at \$97 were \$20 higher than the preceding year.

Cash Receipts from marketings of Hogs, Sheep and Lambs, Cattle and Calves in 1957 totalled \$479,779,000.

This is 16 percent larger than the cash receipts in 1956, which totalled \$412,-313,000 for the same species. Higher prices for all species were responsible for the increased returns. The combined liveweight of the 3 species marketed in 1957 was 2,578,999,000 lbs. or 2 percent less than the 2,637,214,000 lbs. marketed in 1956. The liveweight of Hogs marketed was down 4 percent; Sheep and Lambs was down 23 percent; while the total liveweight of Cattle and Calf marketings was 2 percent larger.

The SPRING and FALL PIG CROPS totalled 7,854,000 head, making Indiana again the third ranking state in the number of pigs saved in 1957. The annual average number of pigs saved per litter at 7.06 was the highest of record for the state.

The 1957 CALF CROP was estimated at 838,000 head or 89 percent of the 942,-

000 cows and heifers on farms at the beginning of the year. The 1957 crop was moderately smaller than the record crop of 873,000 head in 1956.

The LAMB crop in 1957 was estimated at 376,000 head and was 5 percent smaller than the 1956 crop of 396,000 head.

SHORN WOOL production in 1957 totalled 3,700,000 pounds as compared with 3,618,000 pounds the previous year. The 502,000 head of sheep and lambs shorn during the year represented an increase of 5 percent while the average fleece weight of 7.4 pounds was slightly lighter than the 1956 average of 7.6 pounds.

COMMERCIAL BROILER production was increased 10 percent in 1957, with a total liveweight of 139,821,000 pounds from 42,370,000 broilers. Indiana rose from 13th to 12th in rank among Broiler Producing States.

United States

The combined livestock and poultry numbers on farms and ranches as of January 1, 1958 showed a decline of 1 percent from 1957, and was 10 percent below the all-time peak on January 1, 1944. Sheep were the only species of livestock which increased during 1957. Compared with January 1, 1957, cattle numbers were down 1 percent; hogs were down only slightly; sheep were up 2 percent; horses and mules were down 6 percent; chickens were down 5 percent; and turkeys were down 6 percent.

In evaluating the species using an index based on their economic importance, meat animal numbers (cattle, hogs, and sheep) were down 1 percent during 1957; workstock, down 6 percent; cattle kept for milk (cows, heifers and calves), down 2 percent and poultry, down 5 percent.

Supplies of feed grains and other concentrates for the 1957-58 season are 9 percent larger than for 1956-57. Total feed grain supplies at 218 million tons this year include a record feed grain crop of 142 million tons, a carryover of 49 million tons, plus an allowance of 1 million tons for imports, about 2 million tons of wheat and rye diverted to feed grains, and 24 million tons of byproducts feeds. Feed grain supplies per animal unit

this year are estimated at 1.34 tons—the highest of record. Hay production during 1957 totaled 121.4 million tons—12 percent above 1956, 17 percent above the 1946-55 average—and surpassed the previous record of 1955 by 8 percent. Hay stocks on hand January 1, 1958 were 18 percent above a year earlier. Stocks were especially large in the midwest and above average in most of the Southern and Western States. Supplies were short in a number of States along the Atlantic Coast. Weather was generally favorable for grazing livestock this past fall; supplemental feeding has been held to a minimum and disappearance of hay through December was only slightly above average. January 1 hay and roughage stocks were by far the largest on record per roughage consuming animal unit.

Beef cattle prices during 1957 were well above a year earlier. The hog-corn ratio throughout the year was above 1956 and higher than any year since 1954. The egg-feed ratio was somewhat lower than a year earlier for the first 7 months of 1957, but a substantial increase has been shown since August 1. Both farm chicken and commercial broiler feed ratios were lower during 1957. Turkey-feed ratios were also lower and

the average for the year was the lowest on record. Milk feed ratios during the year were maintained at a level slightly higher than during 1956—with the general level being the highest since 1945.

Production rates for both milk cows and layers on farms continue at record levels. The average number of pigs saved per sow farrowed was also up slightly. However, the calving rate, lambing rate and average weight per fleece of sheep and lambs shorn were below a year earlier.

The year 1957 began with cattle on feed at the highest level on record. Numbers on January 1, 1957 were 3 percent above the previous record on January 1, 1956. Some seasonal reduction occurred during the first 3 months. By July 1, heavy marketings and light placements had reduced number in feed lots considerably. Pasture conditions throughout most of the southwest and western ranges were much better than for a good many years. Wheat fields throughout most of the Great Plains States had the growth to carry more cattle and sheep during the fall months than in past years. Ample range feed supplies in the Western States plus the urge to hold back breeding sheep and lambs were factors influencing the 8 percent reduction in sheep and lambs on feed for market on January 1, 1958.

Commercial broiler production during 1957 was up 8 percent in the 22 important broiler States covered by weekly chick placement reports. The number of birds, 1,295 million, was the largest on record for these 22 States.

Spring farrowing intentions are up 6 percent from the spring of 1957. A reduction of 2 percent in the number of cows and heifers 2 years old and older will probably result in a smaller calf crop during 1958. A 3 percent increase in ewes and ewe lambs would suggest an increase in sheep and wool production during 1958. Farm flock producers indicate their intentions to buy 6 percent more baby chicks during the coming year. Broiler placements to date in 1958 in the 22 major areas are up 9 percent over a year ago. Turkey growers indicate their intentions to raise 1 percent more turkeys during 1958.

Although the aggregate number of livestock and poultry on farms January 1 was down by 4 percent from 1957, the

improved price was sufficient to provide a 3.0 billion dollar gain in total value over a year earlier. Gross value of the January 1, 1958 inventory was 14.2 billion, 27 percent above the 1957 level. All livestock species showed an increase in average value per head. Average value of chickens was up 8 percent, while value for turkeys was down by 13 percent. Average value per head of all cattle was up 31 percent; milk cows up 20 percent; hogs up 22 percent; stock sheep up 30 percent; and horses and mules were up 17 percent.

The number of cattle and calves on farms and ranches January 1 is estimated at 93,967,000 head, a reduction of 535,000 head (nearly 1 percent) from a year earlier. This is the second year in a row that numbers have been reduced following 7 consecutive years of increases which brought cattle numbers to a record high level on January 1, 1956. The current estimate, although the lowest since 1952, is only 3 percent below the record high but is 9 percent above the 1947-56 average.

Only the West North Central and South Atlantic areas showed increases in cattle numbers during 1957. All other areas showed reductions ranging from 2 to 3 percent. Looking at the situation by states, cattle numbers increased in 11 states, held steady in 4 states, and declined in all others. The largest increase occurred in Kansas, where cattle numbers increased 14 percent following a decline of 16 percent during 1956. In Texas, the leading cattle state, numbers held steady following a drop of 9 percent during 1956.

The January 1 inventory includes 5.9 million head on feed for market—down 3 percent from a year earlier. Compared with January 1, 1957, all classes of cattle except beef heifers, calves other than heifers for milk, and steers 1 year old and older were down. Cattle kept for milk—cows, heifers and replacement calves—were down 2 percent, while those kept primarily for beef were approximately the same as a year earlier. Milk cows and heifers 2 years old and older at 22,357,000 head were down 2 percent from 1957 and were at the lowest level in 30 years. Heifers between 1 and 2 years old and heifer calves being kept for milk were down 1 percent each. Beef

cows were down 1 percent, but beef heifers were up 1 percent and steers were up 4 percent. Beef calves held at approximately the level of a year earlier.

Commercial slaughter of cattle and calves in 1957 totaled 38,043,000 head, a reduction of 1.3 million head, or 3 percent from the 1956 record high. Cattle accounted for 678,000 head of the reduction and calves for 653,000 head, with most of the reduction occurring in federally inspected plants. Imports of 571,000 head of cattle and calves from Canada and Mexico during the first 11 months of 1957 were more than 4 times the number imported during the similar period in 1956. Imports from Mexico jumped from 81,000 head during the period in 1956 to 262,000 head in 1957, while imports from Canada increased from 46,000 in 1956 to 309,000 in 1957.

Total inventory value of all cattle and calves on farms and ranches at \$11.2 billion, up 30 percent from a year earlier, was 8 percent above the 1947-56 average, and was the highest value since 1953. The average value per head of cattle and calves was \$120.00 compared with \$91.60 a year earlier and the average of \$121.00. Value per head of milk cows averaged \$176.00 on January 1, 1958, which is \$29.00 higher than a year earlier but \$1.00 below the average. Total inventory value of milk cows and heifers 2 years old and older at \$3,932 million was \$567 million more than a year earlier but \$290 million below the average.

Hog numbers on farms January 1, 1958 are estimated at 51,559,000 head. This total shows little change from the 51,703,000 head on hand a year earlier, but is 7 percent less than the 1947-56 average. Numbers were down from a year earlier in the North Atlantic, South Atlantic and South Central regions, but were up in all other regions. In the Corn Belt (12 North Central States), with 74 percent of the U. S. total, numbers were 2 percent above a year earlier. Inventories were up in 9 of these 12 States, with the two most important States, Iowa and Illinois, showing increases of 1 and 4 percent, respectively. Hog numbers showed decreases in three Corn Belt States, with Ohio down 3 percent, Michigan 8 percent, and Missouri 1 percent. Commercial slaughter of 73 million hogs in the United States during 1957 was

nearly 6 million head less than the number slaughtered in 1956.

Hogs and pigs under 6 months old on farms January 1 totaled 33,334,000 head, or 1 percent more than on January 1, 1957. Most of these were principally from the 1957 fall pig crop which was 2 percent larger than the 1956 fall crop. Sows and gilts on farms numbered 8,684,000 head. This was 5 percent more than a year earlier and reflects farmers' intentions to increase spring farrowings. Market hogs over 6 months old (excluding sows and gilts for breeding) on January 1, 1958 at 9,541,000 head were 9 percent less than a year earlier.

The value of all hogs on farms January 1, at \$1.553 million was 22 percent more than a year earlier. Higher values per head were responsible for the increase. The average value per head at \$30.10 for January 1, 1958 compares with \$24.70 a year earlier, and the average of \$31.80.

Stock sheep and lambs on farms and ranches January 1, 1958 are estimated at 27,390,000 head. This is 3 percent more than the 26,538,000 head a year earlier and the largest inventory number since January 1, 1953. All sheep and lambs, including those on feed, totaled 31,328,000 head, up 2 percent from January 1, 1957. Sheep and lambs on feed declined 8 percent to 3,938,000 head, the lowest number in 7 years.

Ewe lamb numbers increased sharply to 4,347,000 head, a gain of 16 percent from a year earlier and reached the highest level since January 1, 1952. Ewes and rams 1 year old and older increased 1 percent and 3 percent, respectively. Wether and ram lambs declined 3 percent.

Stock sheep numbers were up 3 percent from a year earlier in the 11 Western states, Texas and South Dakota. This group of states registered a gain for the first time in six years. The Native states, with a 4 percent increase, continued to expand their sheep numbers.

In Texas, the leading sheep state, stock sheep numbers rose to 4,700,000 head, an increase of 5 percent during the year. Inventories were also up in 7 other Western states and in 21 of the 35 Native states. The North Central states showed the largest percentage increase, led by Iowa with a 20 percent increase.

The total value of stock sheep on farms and ranches January 1, 1958 was \$530 million, 34 percent above a year earlier and compares with the record high of \$783 million in 1952. The average value per head on January 1, was \$19.40, compared with \$14.90 a year earlier and the average of \$17.50.

The downward trend in the number of horses and mules on farms slowed during 1957. The January 1, inventory is estimated at 3,348,000 head, 6 percent less than on January 1, 1957. The annual decline in horse and mule numbers ranged from 8 to 13 percent during the preceding 10 years. The January 1, estimate is slightly less than one half of the 1947-56 average of 6,730,000.

The largest drop during 1957 occurred in the North Atlantic states, with a decrease of 9 percent. The South Atlantic, North Central, and South Central areas were down 7 percent each, while numbers in the Western states declined 3 percent.

Horses and mules 2 years old and older, at 3,160,000 head, were 7 percent less than on January 1, 1957. Colts under 2 years old at 188,000 were only 3 percent below the January 1, 1957 estimate. Continued decline in horse and mule numbers is indicated since colts under 2 years old make up only 6 percent of the total numbers. This is not sufficient to provide replacements for older work stock. Slaughter of horses under federal inspection totaled 142,000 head in 1957, down 23 percent from 1956.

Total value of all horses and mules on farms January 1, 1958 was \$281 million. The average value of \$83.90 per head compares with \$71.60 on January 1, 1957 and the average of \$62.40. The increased value of \$12.30 per head over last year more than offset the decline in numbers for a gain of about \$25 million in inventory value.

Chickens on farms January 1 (excluding commercial broilers) totaled 370,475,000—5 percent less than a year earlier and 12 percent below the 1947-56 average. The number of chickens decreased in all regions of the country except in the South Atlantic where an increase of 1 percent occurred and in the West where numbers were the same as a year earlier. Decreases were 9 percent in the South Central states, 7 per-

cent in the West North Central and 6 percent in the North Atlantic and East North Central states. The total number on farms consisted of 224,228,000 pullets and 127,878,000 hens. The 1957 pullet crop, following several years of low egg prices, was the smallest since 1938. However, in quick response to improved egg prices beginning in June, farmers retained as many hens as possible. As a result, hens make up 36 percent of the hens and pullets on hand January 1, compared with 32 percent a year earlier.

The number of pullets on farms January 1 totaled 224,228,000—a decrease of 10 percent from the January 1, 1957, number. Decreases in the number of pullets amounted to 14 percent in the West North Central and South Central, 12 percent in the East North Central, 9 percent in the North Atlantic and 3 percent in the West. In the South Atlantic states, pullet numbers increased 1 percent over January 1, 1957.

Prices of eggs were relatively low during the last 5 months of 1956 and farmers indicated their intentions on February 1, 1957, to buy 9 percent fewer chicks. Egg prices during the main spring hatching season continued on a very low level, and farmers actually raised 18 percent fewer young chickens. As the season progressed, it became apparent that because of the short pullet crop, fall and winter egg prices would increase. As a result, more than the usual number of pullets were retained and the 18 percent decrease in the number raised resulted in a decrease of only 10 percent in the number of pullets on farms January 1, 1958.

Numbers on January 1 totaled 128 million compared with 119 million a year earlier—an increase of 7 percent. All regions of the country show hen numbers above a year earlier except in the South Central States where they were the same. On January 1, hens made up 36 percent of hens and pullets, compared with 32 percent a year earlier. A very short pullet crop and higher fall and winter egg prices resulted in the retention of more hens than usual in laying flocks.

Total value of all chickens (excluding commercial broilers) on farms January 1, 1958, was \$467 million—an increase of 2 percent from January 1, 1957.

The average value per chicken at \$1.26, compares with \$1.17 a year earlier and the average of \$1.40.

Holdings of turkeys (excluding turkey fryers) on farms January 1 totaled about 5.5 million—6 percent less than a year earlier and 9 percent above average. Heavy breeds totaled 4.8 million—4 percent less than a year earlier. Light breeds were estimated at 632,000—15 percent less than January 1, 1957. Breeder hens totaled 3.4 million, compared with 3.7 million a year earlier. Heavy breed turkey breeder hens January 1 were estimated at 3.0 million—a decrease of 6 percent. Light breeds were estimated at 424,000—a decrease of 11 percent. Testings for pullorum disease from July through De-

cember were down 10 percent for heavy breeds and 17 percent for light breeds from the same period a year earlier. Heavy white breeds, which were 15 percent of all heavies tested July through December, were down 32 percent.

October intentions to hold turkey breeder hens, in 15 of the most important states, were to keep 4 percent less heavy breed hens and 13 percent less light breed hens. This compares with the January inventory of 6 percent less heavy hens and 11 percent less light-type hens.

The value per turkey on hand January 1 was \$4.68, compared with \$5.05 a year earlier. The January 1 value of all turkeys on farms was about \$26 million—13 percent less than January 1, 1957.

List of Available Reports

The Indiana Crop and Livestock Reporting Service publishes official estimates of crop and livestock production, prices received and paid by farmers, and various other special reports. A list of the more important reports and the ap-

proximate date of release is shown in the table below. These reports are free and may be obtained by writing to Agricultural Statistician, Purdue University Agricultural Experiment Station Annex, Lafayette, Indiana.

Name of Report	Frequency of Report	Approximate Date Available
I. Crop Reports		
1. Intentions to Plant	Annual	March 20
2. General Crop Report	Monthly	12th of month
3. Annual Crop Summary	Annual	December 20
4. Grain Stocks		
a. On Farms	Quarterly	12th of month
b. Off Farms	Quarterly	25th of month
II. Livestock Reports		
1. Livestock on Farms, Jan. 1	Annual	Feb. 17
2. Cattle on Feed, Jan. 1	Quarterly	17th of month
3. Pig Crops, March 1	Quarterly	21st of month
4. Livestock Slaughter Report	Monthly	30th of month
III. Dairy Reports		
1. Cows Milked and Milk Production	Monthly	12th of month
IV. Poultry Reports		
1. Egg Production	Monthly	12th of month
2. Commercial Hatchery Report	Monthly	20th of month
3. Broiler Chick Placements	Weekly	Wednesday
V. Price Reports		
1. Prices Received by Farmers	Monthly	1st of month
2. Prices Paid by Farmers for Feed	Monthly	1st of month
3. Prices Paid by Farmers other Items	Quarterly	1st of month
VI. Weather Crop Reports	Weekly Apr. 1-Oct. 1	Tuesday

¹ American cheese made from whole milk only, no skim or part-skim cheddars included.² Cottage cheese includes cottage, pot, and bakers' cheese with a milk fat content of less than 4 percent made by reporting plants. Creamed cottage cheese includes cheese with a milk fat content of 4 to 19 percent. Cottage cheese curd is sold direct for consumption without being further processed, a considerable part is creamed within the plant or shipped to another plant for creaming prior to sale.³ Dry skim milk: 1928-1933 inc., no break down available; 1934-1942 inc., all intended for human consumption placed under roller process.⁴ Low fat ingredient for milk shakes and other frozen dairy products not strictly comparable for all years due to change of terminology used on questionnaires.⁵ Less than 3 plants reporting production.
