Farmers Plant During Drier Weather

Farmers took advantage of the drier weather last week to plant and side-dress corn, according to Nathaniel Warenski, State Statistician, USDA NASS, Indiana Field Office. Topsoil moisture levels decreased from the previous week, with 91 percent rated adequate or surplus.

The average temperature for the week was 70.5 degrees Fahrenheit, 2.1 degrees above normal for the State. The statewide average precipitation was 0.42 inches, 0.55 inches below normal. There were 5.2 days suitable for fieldwork for the week ending June 9.

Dry weather allowed for most farmers to finish planting, as corn and soybeans were at 94 and 89 percent planted, respectively. Despite the excessive rainfall this planting season, uniform emergence was reported on most fields and only some fields required replanting. Winter wheat conditions remained unchanged as harvest time neared. First cuttings of hay continued on pace thanks to warm, dry conditions. Livestock were reported in good condition, and pasture conditions were stable, with some reports of initial browning. Other activities included corn side-dressing, weed control, and mowing.

Soil Moisture: Week Ending 06/09/24

Item	Very short	Short	Adequate	Surplus
	<i>(percent)</i>	<i>(percent)</i>	<i>(percent)</i>	<i>(percent)</i>
