

Iowa is divided into agricultural statistics districts for convenience in compiling and presenting statistical information on crops and livestock. These nine districts are outlined on the above map. The districts are designated as follows: Northwest (NW), West Central (WC), Southwest (SW), North Central (NC), Central (C), South Central (SC), Northeast (NE), East Central (EC), and Southeast (SE). In this bulletin, tables with statistical information by county have the counties grouped alphabetically within each district. Totals and averages are shown for each district.

Following is an alphabetical list of counties showing the crop reporting district in which each county is located:

Message from the Director
National Agricultural Statistics Service
Iowa Field Office

The USDA's National Agricultural Statistics Service, Iowa Field Office is pleased to collaborate with the Iowa Farm Bureau to provide you the thirty-first edition of *Iowa Agricultural Statistics**, a statistical profile of Iowa's agriculture.

Enclosed you will find many interesting statistics about Iowa's vibrant and dynamic agricultural industry. I would like to highlight the fact that in the 2006 ranking of states, Iowa ranked very well.

Iowa is ranked number one in:

- Production of corn
- Production of soybeans
- Capacity of total grain storage
- Capacity of on-farm grain storage
- Harvested acreage of principal crops
- Field and miscellaneous crops value
- Hogs & Pigs inventory
- Value of hogs on farms
- Commercial hog slaughter
- Egg production

Iowa is ranked number two in:

- Capacity of commercial grain storage facilities
- Principal crops total value
- Pig crop inventory
- Red meat production

Only with the support of the entire agricultural industry is the publication and dissemination of agricultural statistics possible. I want to thank the Iowa farmers who completed the questionnaires on inventories and production, the buyers and processors who graciously provided data on their inventories and purchases, as well as all those who supplied analyses that made the *Iowa Agricultural Statistics* possible. It is only with your assistance that NASS is able to complete its mission of providing timely, accurate, and useful statistics in service to U.S. agriculture.

If you have any question or comments concerning this publication, please feel free to contact me. Thank you for your support and interest in Iowa and U.S. agriculture.

¹The "New Definition" of a farm, starting in 1975, includes places which had annual sales of agricultural products of \$1,000 or more. This is the same definition used by the Department of Commerce, Bureau of the Census, for the 1978 Census of Agriculture. The "Old Definition" of a farm included places of 10 or more acres and had annual sales of \$50 or more and places of less than 10 acres that had annual sales of \$250 or more.

2006 Iowa Crop Summary

The 2006 crop season began with unseasonably wet conditions. After the first week, the month of April still saw the typical variation in temperature and spring storms. The dry weather at the end of the month allowed Iowa farmers to see the fast paced onset of fieldwork, especially corn planting. Rain in the last week was welcome by those with planted corn. By the end of April, 97 percent of oats had been planted, as well as, 63 percent of corn.

Unusually wet weather prevailed in March and April, which proved to be critical as very dry weather prevailed in May, June, and July. Each of these months brought record low precipitation totals to various western Iowa locations.

May began with cooler than normal conditions predominating. Scattered light frosts were reported but none with significant damage to emerged crops. The middle through the end of the month brought less precipitation and warmer temperatures to much of the state. Winds helped to dry the topsoil while high temperatures and sun crusted soil made it difficult for new plants to emerge. At the end of May, 94 percent of soybeans had been planted and 56 percent had emerged. Corn planting was finished and was 92 percent emerged. Also, the first alfalfa hay cutting was 41 percent complete, well ahead of normal.

The beginning of June saw warmer than usual weather as farmers in the state wrapped up the planting season. The second week of the month saw little rain and warmer temperatures at the beginning of the week, drastically cooling over the weekend. Spotty rain helped crop conditions in parts of the state, while other parts were in need of rain. As the month came to an end, light showers were welcome, providing some relief for many areas of stressed crops. By month's end, the first cutting of alfalfa was virtually complete, while the second cutting was 9 percent complete. Oat acreage headed was 93 percent. The majority of corn, soybeans, oats, and hay were all considered to be in good or excellent condition.

The beginning of July saw seasonable, dry conditions across most of Iowa, while east central Iowa had too much moisture. The second week brought hot weather with only a few spotty showers. The lack of precipitation in the middle of the month caused the deterioration of crop conditions. Northeastern counties experienced the most plentiful rains, but were still short on moisture. Crop conditions were listed as fair to good as a result of this weather pattern. At month's end, 94 percent of

soybeans were blooming and 66 percent were setting pods. The corn crop development was ahead of normal as 99 percent of corn had tasseled and 94 percent had silked. The oat harvest was 81 percent complete and the second alfalfa harvest was 97 percent complete.

August began with above normal temperatures but also saw welcomed rains. In Northern Iowa, strong winds flattened corn. The middle of the month brought needed moisture. Some areas struggled to put up hay between rain showers while other areas received no precipitation at the end of the month. East central Iowa reported Sudden Death Syndrome in soybeans. By the end of the month, pod setting was virtually complete while soybean leaves turning color was 12 percent complete, slightly ahead of the 5-year average. Corn development was ahead of normal and the condition of both corn and soybeans had improved during the month.

September brought cool, wet weather to the state. Moderate to severe hail damage was seen in the northwest quarter of the state. By month's end, the state's topsoil moisture was rated 89 percent adequate and surplus. Part of Iowa experienced their first freeze September 20th, and low lying areas reported frost that same morning. Corn harvest was 8 percent complete and soybean harvest was 26 percent complete, both near normal.

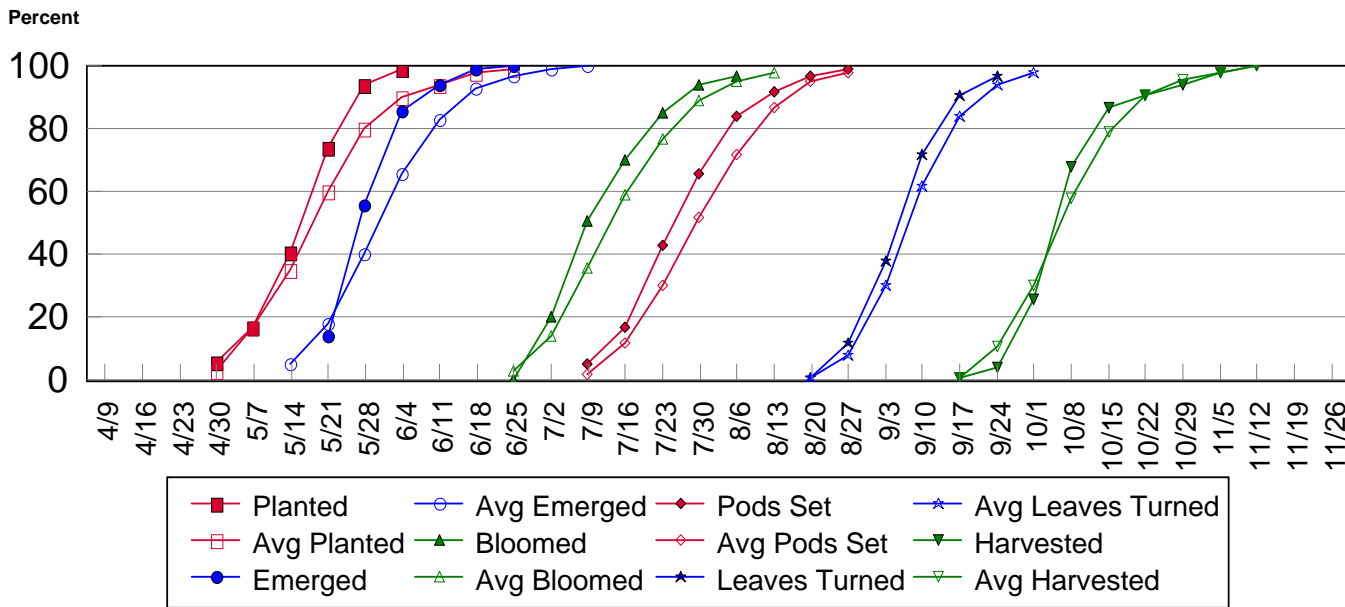

The month of October began with seasonal temperatures and below average precipitation, allowing combines to run most of the first two weeks. The middle of the month brought snow varying from a trace to an inch, slowing fieldwork progress only briefly. This was Iowa's earliest measurable snowfall since 1999. The month ended with drier conditions and unseasonable cold temperatures, providing for a busy week. By the end of the month, 67 percent of corn had been harvested and about 94 percent of soybeans had been harvested, both near normal.

As November began, the 2006 soybean harvest was coming to a close. The first week brought cooler than normal temperatures but no precipitation. Corn harvest was nearly complete by midmonth and fall fertilizer application was 52 percent complete by the third week. Overall, this was the warmest year since 1998 and eighth year of the past nine to average warmer than the long-term average, 2003 was the exception. Snowfall for 2006 averaged 12 inches, 19.4 inches below normal. This is the lowest annual total in the 119 years of state snowfall records.

¹Total supply includes carryover, production, and imports. ²"Ending stocks available by days" is calculated by dividing the current year's total use (feed & residual; food, seed & industrial; exports) by days during year to obtain a daily use. The ending stocks are then divided by the daily use to obtain stocks available by days. ³Estimated. ⁴Projection June 2007.

Biotechnology Varieties, Iowa and U.S.

USDA, National Agricultural Statistics Service conducts the June Agricultural Survey each year. Randomly selected farmers across Iowa are asked if they planted corn or soybean seeds that, through biotechnology, are resistant to herbicides, insects, or both. Conventionally bred herbicide resistant varieties were excluded. Insect resistant varieties include only those containing bacillus thuringiensis (Bt). Stacked gene varieties include those containing biotech traits for both herbicide and insect resistance.

¹ Planted acres in 2006 for Iowa were 10.15 million acres.

The agricultural chemical use estimates refer to on-farm use of commercial fertilizers and pesticides on targeted crops for the 2006 crop year. The targeted crops for Iowa only included soybeans. Farm and ranch operators were enumerated late in the growing season after the farm operator had indicated that planned applications were completed.

The data were compiled from the Agricultural Resources Management Survey (ARMS). The main portion of data collection time frame occurred during the months of September-December of 2006.

Soybeans: Herbicide, Percent of Acres Treated and Total Applied, Iowa, 2006

2006 Livestock Summary

Iowa

Iowa's cattle, hog, and sheep producers received \$6.73 billion from marketings in 2006. This was down slightly from the \$6.75 billion received in 2005. Cattle accounted for \$2.55 billion of the cash receipts in 2006 while hog sales totaled \$4.15 billion and sheep \$33.3 million. This compares to 2005 receipts of \$2.43 billion for cattle, \$4.29 billion for hogs, and \$40.3 million for sheep.

Cattle: Iowa producers had 3.95 million cattle and calves on farms as of January 1, 2007, up 4 percent from January 1, 2006. Cows and heifers that have calved totaled 1.28 million head, up 3 percent from a year earlier. Of this total, 1.07 million head were beef cows, up 2 percent from last year, and 210,000 head were milk cows, up 12 percent from last year.

Heifers weighing 500 pounds or more, at 960,000 head, were up 7 percent from the previous year. Of this total, 160,000 were beef cow replacements, 120,000 were milk cow replacements, and 680,000 were other heifers.

Steers weighing 500 pounds or more, at 1.16 million head, were up 5 percent from a year ago. An estimated 70,000 bulls weighing 500 pounds or more were on hand, unchanged from last year. Calves weighing 500 pounds or less totaled 480,000 head, down 2 percent from the previous year. The estimated 2006 calf crop for Iowa is 1.14 million head, down 3 percent from a year ago.

Hogs: Iowa continues to rank number one among the states in hog inventory. Hogs and pigs on hand December 1, 2006 totaled 17.3 million, or almost 28 percent of the Nation's hogs.

The state's pork producers farrowed 1.84 million sows from December 2005 through November 2006, 45,000 more than during the same period a year ago. The average pigs saved per litter was 9.01, resulting in a pig crop of 16.6 million, up 3 percent from the previous year. Marketings of hogs were 32.9 million head in 2006, up 4 percent from 2005.

Sheep: Sheep numbers on January 1, 2007 in Iowa totaled 235,000 head, unchanged from January 1, 2006. An estimated 210,000 lambs were born during 2006, up 2 percent from the previous year. The 200,000 sheep shorn in 2006 produced 1.23 million pounds of wool valued at \$295,000.

Milk Production: Iowa dairymen produced an estimated 4.13 billion pounds of milk during 2006, up 3 percent from 2005. There was an average of 205,000 milk cows on hand during 2006, up 5 percent from the 195,000 a year earlier. The annual average milk produced per cow was 20,146 pounds, down from the 20,641 pound average in 2005.

Red Meat Production: Slaughter plants in Iowa produced 6.54 billion pounds of red meat (beef, veal, pork, and mutton) during 2006, slightly more than the previous year.

United States

The 2006 gross income from cattle and calves, hogs and pigs, and sheep and lambs for the U.S. totaled \$64.2 billion, down 2 percent from 2005. Gross income decreased for cattle and calves, hogs and pigs, and sheep and lambs. Cattle and calves decreased slightly, hogs and pigs decreased 6 percent, and sheep and lambs decreased 15 percent.

Total 2006 cash receipts from marketings of meat animals decreased 2 percent to \$63.7 billion. Cattle and calves accounted for 77 percent of this total, hogs and pigs 22 percent, and sheep and lambs 1 percent. Production increased for all cattle and calves and hogs and pigs. Production decreased for sheep and lambs. Average prices were down for all three species.

Cattle and Calves: Cash receipts from marketings of cattle and calves decreased slightly from \$49.3 billion in 2005 to \$49.1 billion in 2006. All cattle and calf marketings totaled 54.7 billion pounds

in 2006, up 3 percent from 2005. The U.S. annual average price per 100 pounds live weight for cattle was \$87.20, a decrease of \$2.50 from 2005. For calves, the annual average price decreased from \$135.00 to \$133.00.

Hogs and Pigs: Cash receipts from hogs and pigs totaled \$14.1 billion during 2006, down 6 percent from 2005. Marketings totaled 29.2 billion pounds in 2006, up 3 percent from 2005. The U.S. annual average price per 100 pounds live weight decreased from \$50.20 in 2005 to \$46.00 in 2006.

Sheep and Lambs: Cash receipts from marketings of sheep and lambs in 2006 were \$481 million, down 15 percent from 2005. Marketings decreased slightly to 569 million pounds. The U.S. annual average price per 100 pounds live weight for sheep decreased from \$45.10 in 2005 to \$35.20 in 2006. For lambs, the annual average price decreased from \$110.00 to \$95.50.

2006 Poultry Summary

Iowa

Chicken inventories in the state totaled 61.6 million birds on hand December 1, 2006, and represented a 5 percent increase from the same date the previous year. Average number of layers on hand during 2006 was 51.6 million, 6 percent above the 48.8 million birds during 2005. Egg production per bird, at 268 eggs, was up 2 eggs from 2005. Total egg production for 2006 was 13.81 billion eggs, 6 percent above the previous year. In 2006 the value of

production from eggs was \$406.9 million, up from \$335.3 million in 2005. The eggs produced brought an average of 35.4 cents per dozen, up from 31.0 cents per dozen in 2005.

An estimated 79.7 million egg-type chicks were produced in Iowa hatcheries during 2006, up nearly 6 percent from the 75.1 million produced in 2005.

United States

The combined value of production from broilers, eggs, turkeys, and the value of sales from chickens in 2006 was \$26.8 billion, down 5 percent from the \$28.2 billion in 2005. Of the combined total, 70 percent was from broilers, 16 percent from eggs, 13 percent from turkeys, and less than 1 percent from chickens.

The value of broilers produced during 2006 was \$18.9 billion, down 10 percent from 2005. The total number of broilers produced in 2006 was 8.88 billion, up slightly from 2005. The total amount of live weight broilers produced in 2006 was 48.8 billion pounds, up 2 percent from 2005. The 2006 average price per pound on a live weight equivalent basis was 38.6 cents per pound, compared with 43.6 cents in 2005.

Value of all egg production in 2006 was \$4.39 billion, up 8 percent from the \$4.05 billion in 2005. Egg

production totaled 90.9 billion eggs, up 1 percent from the 90.0 billion eggs produced in 2005. In 2006, all eggs averaged 57.9 cents per dozen, compared with 54.0 cents in 2005.

The value of turkeys produced during 2006 was \$3.55 billion, up 12 percent from the \$3.18 billion the previous year. Turkey production in 2006 totaled 7.42 billion pounds, up 5 percent from the 7.10 billion pounds produced in 2005. The average price received by producers during 2006 was 47.9 cents per pound, compared with 44.9 cents in 2005.

The value of sales from chickens (excluding broilers) in 2006 was \$53.1 million, down 18 percent from the \$64.7 million a year ago. Prices averaged 5.8 cents per pound, compared with 6.5 cents in 2005. The number of chickens sold in 2006 totaled 172 million, down 11 percent from the total sold during the previous year.

Livestock Operations: By Specie, Iowa

Ethanol: Co-Products Used for Livestock Feed

In the production process of converting corn to ethanol, important co-products are produced as well. These co-products, also called distillers grains or corn gluten feed, are created within the dry or wet mill process and can be fed to livestock. With the expansion of the ethanol industry, there is a greater supply of co-products. The goals of this study were to identify how many livestock operations were feeding co-products, which co-products were being fed, and the characteristics of those co-products. Information was also collected about how the operations have used and would like to use co-products and related services. In addition the study identified concerns and barriers which prevented operations from feeding co-products.

This study was a joint effort between the National Agricultural Statistics Service and the Nebraska Corn Development, Utilization & Marketing Board (an agency of the State of Nebraska). Approximately 9,400 livestock operations in Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin were contacted by mail in February 2007 with a second mailing two weeks later and telephone follow-up in March.

This probability based survey included dairy cattle, cattle on feed, beef cattle (cow/calf), and hogs. Each species was stratified and sampled independently to represent all livestock operations in the 12 state region. For sampling efficiency, minimum operation size thresholds were set: 20 head for dairy cattle, 50 head for cattle on feed, 10 head for beef cattle, and 25 head for hogs. Hog data were summarized based on the sample operation's state headquarters and may include data from outside the 12 official survey states. The survey reference date was calendar year 2006. Of the 9,400 operations contacted 1,276 indicated they had used co-products during 2006. Their responses were adjusted for non-response and are reported in this release. Responses for operations not feeding co-products were also adjusted for non-response.

¹ Retail costs are based on CPI-U of retail prices for domestically produced farm foods, published monthly by the Bureau of Labor Statistics (BLS). Farm value is the payment for the quantity of farm equivalent to the retail unit, less allowance for by-product. Farm values are based on prices at first point of sale, and may include marketing charges such as grading and packing for some commodities. The farm-retail spread, the difference between the retail value and farm value, represents charges for assembling, processing, transporting, and distributing. ² Weighted-average value of retail cuts from pork and Choice yield grade 3 beef. Prices from BLS. ³ Value of wholesale (boxed beef) and wholesale cuts (pork) equivalent to 1 lb. of retail cuts adjusted for transportation costs and by-product values. ⁴ Market value to producer for live animal equivalent to 1 lb. of retail cuts, minus value of by-products. ⁵ Charges for retailing and other marketing services such as wholesaling and in-city transportation. ⁶ Charges for livestock marketing, processing, and transportation.
