

Iowa is divided into agricultural statistics districts for convenience in compiling and presenting statistical information on crops and livestock. These nine districts are outlined on the above map. The districts are designated as follows: Northwest (NW), West Central (WC), Southwest (SW), North Central (NC), Central (C), South Central (SC), Northeast (NE), East Central (EC), and Southeast (SE). In this bulletin, tables with statistical information by county have the counties grouped alphabetically within each district. Totals and averages are shown for each district.

Following is an alphabetical list of counties showing the crop reporting district in which each county is located:

Message from the Director
National Agricultural Statistics Service
Iowa Field Office

The USDA's National Agricultural Statistics Service, Iowa Field Office is pleased to collaborate with the Iowa Farm Bureau to provide you the latest edition of the *Iowa Agricultural Statistics**. This statistical profile of Iowa's agriculture not only includes state level information but also includes information for every Iowa county.

Enclosed you will find many interesting statistics about Iowa's vibrant and dynamic agricultural industry. I would like to highlight the fact that in the 2009 ranking of states, Iowa ranked number one in:

- Corn Production
- Soybean Production
- Hogs & Pigs inventory & value
- Commercial hog slaughter
- Egg production
- Capacity of on-farm grain storage
- Capacity of commercial grain facilities
- Harvested acreage of principal crops
- Value of Field and Miscellaneous crops
- Value of exports for feed grains, soybeans, and their related products
- Value of exports for live animals and meat

Iowa is ranked number two in:

- Pig crop inventory
- Sows that farrowed
- Red meat production
- Cash Receipts from Marketings
- Net Farm Income
- Principal crops total value

Publication and dissemination of these and other agricultural statistics is only possible with the support of the entire agricultural industry. I want to thank the Iowa farmers who completed their questionnaires on inventories and production, the buyers and processors who graciously provided data on their inventories and purchases, as well as all those who supplied analyses that made the *Iowa Agricultural Statistics* possible. It is only with your assistance that NASS is able to complete its mission of providing timely, accurate, and useful statistics in service to U.S. agriculture.

Thank you for your support and interest in Iowa agriculture. The Iowa Field Office staff is dedicated to meeting the agricultural data needs of all users. Please contact us anytime with your questions, comments, and requests for information.

Greg A. Thessen, Director

USDA NATIONAL AGRICULTURAL STATISTICS SERVICE DEFINITION OF A FARM

The definition of a farm is "any place from which \$1,000 or more of agricultural products were produced and sold, or normally would have been sold, during the year". This definition has remained the same since 1974. Government payments are included in sales. Ranches, institutional farms, experimental and research farms, and Indian Reservations are included as farms. Places with the entire acreage enrolled in the Conservation Reserve Program (CRP), Wetlands Reserve Program (WRP), or other government programs are counted as farms.

Activities included as agriculture, however, have undergone modification in recent years. Beginning in 1995, operations having 5 or more horses or ponies and no other agricultural sales were counted as farms. Two industries, maple syrup and short rotation woody crop farms, were added as a result of the new North American Industry Classification System (NAICS). These changes were made to achieve comparability with the Census of Agriculture farm definition. To further align the counting of farms with the Census of Agriculture, places with 100 acres or more of pasture only were included in farm and land in farm numbers starting in 2002.

The 2007 Census of Agriculture showed a significant increase in the number of farms, and reversed the downward trend that was shown in the annual estimates of Farm Numbers since the 2002 Census of Agriculture. NASS believes some of the increase is due to methodological changes allowing NASS to more accurately count small farms in the 2007 Census. The 2007-2009 farm number estimates reflect adjustments in the number of farms based on estimates produced by the 2007 Census of Agriculture.

2009 Iowa Crop Summary

The 2009 crop season began with warm temperatures, variable winds, and occasional showers. The weather permitted 15.2 total days suitable for fieldwork during April. By the end of the month, 47 percent of corn and 93 percent of oats had been planted, both well ahead of the 5-year average.

May began with heavy rains that caused severe erosion and delayed planting. Once farmers were in the fields, corn and soybean planting progressed at a near normal pace during the month. Warm, windy conditions dried fields by the last week in May. The corn crop was 90 percent emerged by the end of May, while oats were virtually completely emerged. Soybeans were 91 percent planted and 59 percent emerged. Alfalfa first cutting was 13 percent complete, behind the normal 24 percent.

Frequent rain throughout the month of June maintained soil moisture supplies. Cooler than normal temperatures were abruptly replaced by much warmer temperatures by mid-June. Nearly half the state experienced severe weather during the third week of June. Hail and wind damage caused crop losses. By the end of June, topsoil moisture rated 77 percent adequate with subsoil moisture rated 74 percent adequate. The month ended with the corn stand rated 95 percent of normal, 86 percent of oats had headed, and soybeans were 97 percent emerged. Completion of first cutting of alfalfa, at 76 percent, was well behind the normal of 93 percent.

Temperatures during July averaged nearly 6 degrees below normal, ranking it as the coolest July on record. Wet weather prevailed during the first half, while some areas were drier in the second half. By the end of July, 82 percent of the topsoil rated adequate. By month's end, corn development was behind normal. Only 24 percent of the corn was at or beyond the milk stage, compared to the normal of 47 percent. Soybean development was also slightly behind normal. Soybeans setting pods were 61 percent compared to the five-year average of 66 percent. Alfalfa harvest was hampered by the cool wet July. Second cutting of alfalfa was 72 percent complete, compared to the normal of 90 percent. Oat harvest had reached 64 percent, which was 12 percentage points behind the 5-year average. Corn condition rated 78 percent good to excellent, while soybeans rated 77 percent good to excellent.

Above normal precipitation and below normal temperatures during August maintained soil moisture levels. August was the 10th coolest and 14th wettest August on record. Corn and soybean conditions were both rated 76 percent good to excellent. Disease and insect pressure was reported in corn and soybeans, along with concerns about an early frost. By the end of August only 28 percent of the corn was in or past the dent stage, well behind the normal 55 percent. Soybeans had just begun to turn color, compared to 18 percent for the

five-year average. Oat harvest was complete by the third week of August. The third cutting of alfalfa hay was slowed by the cool wet month of August. Fifty-five percent of the third cutting was complete, compared to 71 percent for the normal.

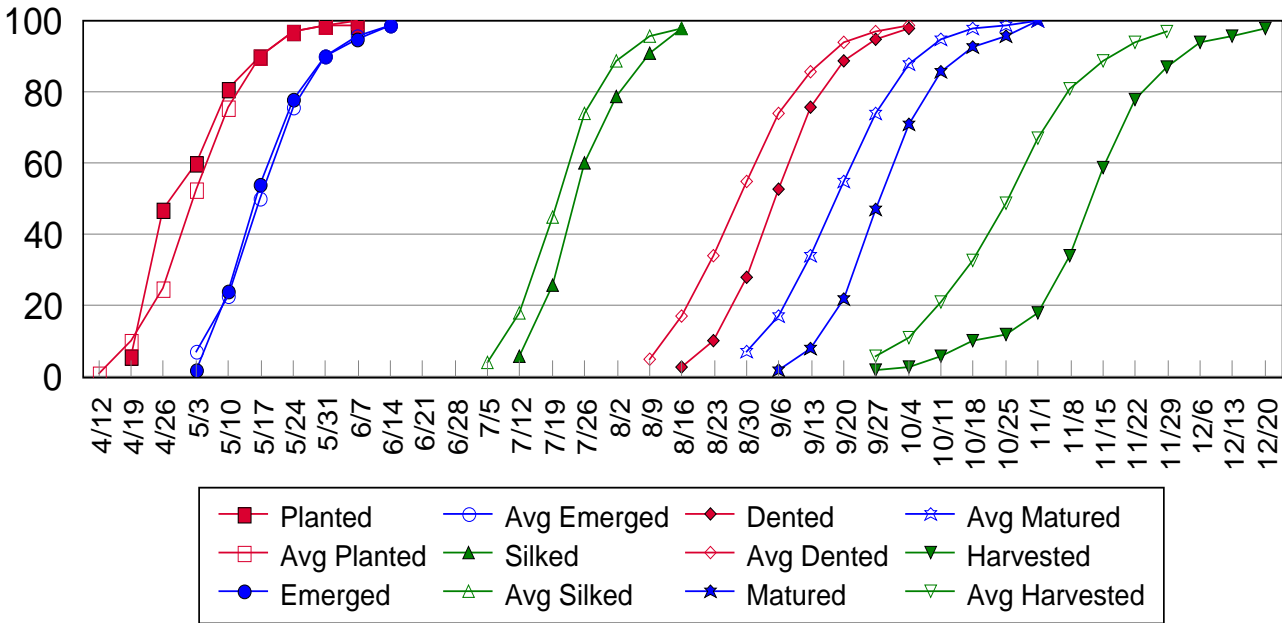

Temperatures during September were above normal and fluctuated very little. The eastern three-fourths of the state did not see any rain the first 3 weeks of the month. By the end of September, 23 percent of the topsoil moisture rated short to very short. The dry weather at the beginning of the month did help crops mature. Nearly half the corn crop was mature, or safe from harvest, compared to 74 percent for the norm. Nearly three-fourths of the soybeans were dropping leaves, compared to 84 percent for the five-year average. Corn and soybean harvest had just begun when widespread rain over the eastern half of the state delayed harvest. Moisture content of all field corn rated 32 percent, four percentage points higher than the five-year average. Soybean harvest reached 6 percent, well behind the normal 20 percent. Alfalfa third cutting was 93 percent complete.

Wet weather during the first few days of October and frequent precipitation for the remainder of the month slowed harvest. Unseasonably cold temperatures during the first half of the month were followed by above normal temperatures during the last half of October. Topsoil moisture rated 61 percent surplus by month's end. The first hard freeze the first week of October ended the growing season for most of Iowa. At the time, approximately three-fourths of the corn crop was safe from frost. Corn harvest, by month's end, was only 18 percent complete, 22 days behind the five-year average. Soybean harvest was 54 percent complete which was 26 days behind normal. High moisture content was a concern that also delayed harvest.

November began dry with warmer temperatures. Grain moisture issues started to bottleneck corn movement and impacted harvest; driers were running at full capacity. Some elevators were not accepting wet corn if their driers were full or if they had ran out of natural gas. Soybean harvest was nearly complete by mid-month except in southern Iowa where some fields still stood. The month ended with corn 87 percent harvested. Some corn fields would not get harvested until early 2010.

Biotechnology Varieties, Iowa and U.S.

USDA, National Agricultural Statistics Service conducts the June Agricultural Survey each year. Randomly selected farmers across Iowa are asked if they planted corn or soybean seeds that, through biotechnology, are resistant to herbicides, insects, or both. Conventionally bred herbicide resistant varieties were excluded. Insect resistant varieties include only those containing bacillus thuringiensis (Bt). Stacked gene varieties include those containing biotech traits for both herbicide and insect resistance.

Objective Yield Data Corn for Grain

The National Agricultural Statistics Service conducts objective yield surveys in randomly selected plots in corn for grain fields. These fields are visited monthly from August through harvest to obtain specific counts and measurements. Data in these tables are rounded actual field counts from this survey.

Objective Yield Data Soybeans

The National Agricultural Statistics Service conducts objective yield surveys in randomly selected plots in soybean fields. These fields are visited monthly from August through harvest to obtain specific counts and measurements. Data in these tables are rounded actual field counts from this survey.

2009 Livestock Summary

Iowa

Iowa's cattle, hog, and sheep producers received \$6.92 billion from marketings in 2009, an 11 percent decrease from marketings in 2008. Cattle accounted for \$2.47 billion of the cash receipts, hog sales totaled \$4.43 billion and sheep \$23.4 million cash receipts.

Cattle: Iowa producers had 3.85 million cattle and calves on farms January 1, 2010, down 2.5 percent from January 1, 2009. Cattle and heifers that calved totaled 1.10 million head, down 4 percent from a year earlier. Of this total, 885,000 head were beef cows and 215,000 head were milk cows.

Heifers weighing 500 pounds and over were at 900,000 head, up 3.4 percent from the year earlier. Of this total, 130,000 head were beef cow replacements, down 7 percent, and 130,000 head were milk cow replacements, which was unchanged from 2009 and all other heifers were 640,000 head.

Steers weighing 500 pounds or more were down 4 percent at 1.33 million head. Bulls 500 pounds and over included 60,000 head, down 14.3 percent. Calves weighing under 500 pounds totaled 460,000 head, down 4 percent.

Hogs: Iowa continued to rank number one in hog inventory in the United States. Hogs and pigs on hand December 1, 2009, totaled 19.2 million head, 29 percent of the nation's hogs.

Iowa's pork producers farrowed 1.95 million sows from December 2008 through November 2009, down 4 percent from the previous year. The average pigs saved per litter was 9.7, resulting in a pig crop of 19.1 million.

Sheep: Sheep and lambs totaled 210,000 head on January 1, 2010, up 5 percent from a year ago. An estimated 170,000 lambs were born during 2009, down 7 percent.

Milk Production: Iowa dairy farmers produced 4.38 billion pounds of milk during 2009, an increase of over 1 percent from 2008. Milk cows on hand averaged 215,000 head, down 1,000 from 2008. The annual average milk produced per cow was 20,367 pounds, up nearly 2 percent from the previous year.

Red Meat Production: Slaughter plants in Iowa produced 6.97 billion pounds of red meat (beef, veal, pork, and mutton) during 2009, decreasing by just over 1 percent from 2008.

United States

The 2009 gross income from cattle and calves, hogs and pigs, and sheep and lambs for the U.S. totaled \$59.0 billion, down 10 percent from 2008. Gross income decreased for cattle and calves, hogs and pigs, and sheep and lambs.

The total 2009 cash receipts from marketings of meat animals was \$58.6 billion pounds, down 10 percent from 2008. Production decreased for cattle and calves, hogs and sheep, and sheep and lambs.

Cattle: Cash receipts from marketings of cattle and calves for 2009 were \$43.8 billion, down 10 percent from 2008. All cattle and calf marketings totaled 54.1 billion pounds in 2009. The U.S. annual average price per 100 pounds live weight for cattle was \$80.40, a decrease from 2008. For calves, the annual average price decreased from \$113.60 to \$106.40 in 2009.

Hogs: Cash receipts from hogs and pigs marketings for 2009 total \$14.4 billion, down 10 percent from 2008. Marketings totaled 32.7 billion pounds, up slightly from 2008. The U.S. annual price per 100 pounds live weight decreased from \$48.40 to \$42.30 in 2009.

Sheep: Cash receipts from marketings of sheep and lambs in 2009 were \$436 million, down 3 percent from 2008. Marketings decreased 6 percent to 494 million pounds. The U.S. annual average price per 100 pounds live weight for sheep increased from \$27.30 to \$32.60 in 2009. For lambs, the annual average price at \$99.90 was up 40 cents per 100 pounds live weight.

¹ Value of agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. ² A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

NA = not available ¹ Market year average price does not include any grain forfeited to CCC. ²For crops, market year prices are computed by weighting monthly prices by estimated monthly marketings. Months underlined indicate end of marketing year for that commodity. For example, the crop marketing season for corn is from September 1 through August 31 of the following year.

¹For livestock and livestock products, prices are calendar year monthly prices weighted by monthly marketings except for milk cow prices (which is a straight average of the quarterly prices) and hog and egg prices (which are weighted averages of monthly prices for marketing season). Months underlined indicate end of marketing year for that commodity. ²All eggs prior to 1982. *Data not available.
