

Iowa is divided into agricultural statistics districts for convenience in compiling and presenting statistical information on crops and livestock. These nine districts are outlined on the above map. The districts are designated as follows: Northwest (NW), West Central (WC), Southwest (SW), North Central (NC), Central (C), South Central (SC), Northeast (NE), East Central (EC), and Southeast (SE). In this bulletin, tables with statistical information by county have the counties grouped alphabetically within each district. Totals and averages are shown for each district.

Following is an alphabetical list of counties showing the crop reporting district in which each county is located:

Message from the Director National Agricultural Statistics Service Iowa Field Office

The USDA's National Agricultural Statistics Service, Iowa Field Office is pleased to collaborate with the Iowa Farm Bureau to provide you the latest edition of the *Iowa Agricultural Statistics**. This statistical profile of Iowa's agriculture not only includes state level information but also includes information for every Iowa county.

Enclosed you will find many interesting statistics about Iowa's vibrant and dynamic agricultural industry. I would like to highlight the fact that in the 2012 ranking of states, Iowa ranked number one in:

- Corn for Grain Production
- Corn Export Value
- Soybean Production
- Soybean Export Value
- Egg Production
- Hogs and Pigs Inventory & Value
- Pork Export Value
- Pig Crop
- Sows Farrowed
- Commercial Hog Slaughter
- Capacity of On-Farm Storage
- Capacity of Total Storage
- Harvested Acreage of Principal Crops
- Feeds and Fodder Export Value
- Field and Misc. Crop Value

Iowa is ranked number two in:

- Total Value of all Crops
- Total Value of Agricultural Exports
- Red Meat Production
- Cash Receipts from Marketings
- Farm Production Expenditures
- Net Farm Income
- Cash Rent for Cropland
- Capacity of Commercial Grain Facilities

Publication and dissemination of these and other agricultural statistics is only possible with the support of the entire agricultural industry. I want to thank the Iowa farmers who completed their questionnaires on inventories and production, the buyers and processors who graciously provided data on their inventories and purchases, as well as all those who supplied analyses that made the *Iowa Agricultural Statistics* possible. It is only with your assistance that NASS is able to complete its mission of providing timely, accurate, and useful statistics in service to U.S. agriculture.

Thank you for your support and interest in Iowa agriculture. The Iowa Field Office staff is dedicated to meeting the agricultural data needs of all users. Please contact us anytime with your questions, comments, and requests for information.

Greg A. Thessen, Director

Much of the data used to calculate statistics published by the National Agricultural Statistics Service is collected by a part-time staff of telephone and field enumerators. This enumerator staff is employed by the National Association of State Departments of Agriculture (NASDA) and serves as contract workers for the USDA. The Iowa Field Office thanks the Iowa enumerators for their contribution and dedication in providing Iowa with the highest quality agricultural information possible.

2012 Iowa Agricultural Overview

Crops and Weather Summary

The 2012 crop season got off to an early start in April with sunshine and above normal temperatures. Despite rain and storms during the middle of the month, corn planting progressed rapidly. By the end of the month, 50 percent of corn had been planted, ahead of the previous year's 7 percent. Oats were 98 percent planted and 76 percent emerged, both generously ahead of the previous year's percentages and the five year average.

May began with persistent rain that slowed planting progress. The rest of the month provided dry weather which helped advance crop progress, but left soil moistures dry in the South. The corn crop was 95 percent emerged by the end of May, and soybeans were 97 percent planted with 66 percent emerged. Thirty-five percent of the oat crop was headed, over 2 weeks ahead of normal. Alfalfa first cutting was 72 percent complete; substantially ahead of the average 12 percent.

Despite varied rainfall during the month of June, there was still a favorable 23.5 days suitable for fieldwork throughout the month. Some areas were still in need of more rain resulting in crop conditions declining the first three weeks of the month. By the end of the month, topsoil and subsoil moisture rated 73 percent very short to short. Sixty-eight percent of the oat crop had turned color, well ahead the average of 24 percent. Twenty percent of the oat crop was harvested, two weeks ahead of normal. The second cutting of alfalfa, at 76 percent complete, was almost three weeks ahead of normal.

Farmers endured dry and hot conditions during July, and crop conditions suffered. The state averaged 6.3 degrees above normal for the month. Topsoil and subsoil moisture levels rated near 100 percent very short to short during the month, aiding to the decline in crop conditions. Farmers began to chop corn for silage towards the end of the month. Ninety-seven percent of the corn crop was silking, well ahead of the 77 percent average. Eight percent of the corn crop had reached the dent stage, the most advanced the crop had been at this time since 1987. Ninety-three percent of the soybean crop had bloomed, 8 percentage points ahead of normal. Third cutting of alfalfa was 63 percent complete, just over a month ahead of normal. Oat harvest had reached 98 percent, significantly ahead of last year's 66 percent and the average of 55 percent.

August received widespread rainfall throughout most of the month. Temperatures fell below normal, offering some relief, but quickly returned to almost 7 degrees above normal by the end of the month. Soil moisture supplies improved slightly during the month due to the rain. Dry and warm weather the last week of August promoted rapid progression of Iowa's drought-damaged crops. By the end of August, 91 percent of the corn had reached the dent stage and 50 percent of the crop was mature, 39 percentage points ahead of the normal. Corn harvesting was off to an early start with 5 percent complete, when normally harvesting would not occur at this time. Fifty-one percent of the soybeans had turned color, ahead of the average of 22 percent. The third cutting of alfalfa continued to be a month ahead of normal with 98 percent complete.

Harvesting progressed to well above normal percentages, thanks to dry conditions during September. Temperatures started falling and the cold weather towards the end of the month brought a freeze to 80 percent of the state, the earliest widespread freeze since 1983. By the end of September, 56 percent of the corn acres had been harvested, ahead of the average 8 percent. Soybean acres harvested was 54 percent complete, well ahead of 2011's 16 percent. Some Iowa farmers were getting a fourth and even fifth cutting of alfalfa, and fall tillage was underway in some areas.

Dry and warm weather at the beginning of October quickly turned to cool and rainy. The much-needed rain helped improve the soil moisture levels, but slowed the progression of harvest. By the end of October, corn was 95 percent harvested, 40 percentage points above average. Soybean harvest was 97 percent complete, 2 weeks ahead of the normal pace. As the harvest season neared completion, 99 percent of the State reported adequate or surplus off-farm storage capacity and 97 percent on-farm storage capacity.

Temperatures in November fluctuated often, ranging from a high of 72 degrees to a low temperature of 7 degrees. Lack of rain was concerning to farmers as soil moisture levels remained mostly very short to short. Farmers were eager to finish applying fertilizer before hard freezing occurred. Very few fields had yet to be harvested by the end of the month. Grain movement was slow by the end of the month, with only 17 percent of the State seeing moderate to heavy grain movement from farm to elevator. Hay supplies were considered short across 41 percent of Iowa with 37 percent of the hay supply considered to be in good condition.

Livestock Summary

Iowa producers had 3.85 million **cattle and calves** on farms January 1, 2013, down 50,000 from January 1, 2012. Cows that had calved totaled 1.13 million head, up 3 percent from a year earlier. Of this total, 925,000 head were beef cows and 205,000 head were milk cows.

Heifers weighing 500 pounds and over were at 950,000 head, up 3 percent from the year earlier. Of this total, 150,000 head were beef cow replacements, up 7 percent; 120,000 head were milk cow replacements, down 25 percent from 2012; and all other heifers numbered 680,000 head.

Steers weighing 500 pounds or more were down 4 percent at 1.25 million head. Bulls 500 pounds and over included 60,000 head, unchanged from January 1, 2012. Calves weighing under 500 pounds totaled 460,000 head, down 12 percent.

Iowa continued to rank number one in **hog** inventory in the United States. Hogs and pigs on hand December 1, 2012, totaled 20.6 million head, 31 percent of the nation's hogs.

Iowa's pork producers farrowed 1.96 million sows from December 2011 through November 2012. The average pigs saved per litter was 10.4. This resulted in a pig crop of 20.31 million, a 2 percent increase from the previous year.

Sheep and lambs totaled 175,000 head on January 1, 2013, down 10 percent from a year ago. An estimated 150,000 lambs were born during 2012, down 3 percent.

Iowa **milk production** totaled 4.43 billion pounds of milk during 2012, up 2 percent from 2011. Milk cows on hand remained unchanged from last year, averaging 204,000 head. The annual average milk produced per cow was 21,730 pounds, up 2 percent from the previous year.

Slaughter plants in Iowa produced 6.64 billion pounds of red meat (beef, veal, pork, and mutton) during 2012, increasing over half of a percent from 2011.

Prices Summary

All milk prices averaged \$19.20 per hundredweight in 2012, down about 6 percent from \$20.50 in 2011. Prices averaged from a high of \$23.00 in December to a low of \$16.80 in May.

The 2011-2012 marketing year average price received for **corn** was \$6.20 per bushel, up 19 percent from the previous year. The **marketing year** began with \$6.63 per bushel in September and climbed to a high of \$7.89 per bushel in August. The average monthly prices for the 2012 **calendar year** ranged from a high of \$7.89 per bushel in August to a low of \$5.99 in January.

The 2011-2012 marketing year average price for **soybeans** was \$12.60 per bushel, an increase of 13 percent from 2010-2011. The **marketing year** began with \$12.60 per bushel in September and increased to a high of \$16.80 per bushel in August. The average monthly prices for the 2012 **calendar year** ranged from a high of \$16.80 per bushel in August to a low of \$11.80 in January.

The 2011-2012 marketing year average price for **oats** was \$3.33 per bushel, up 37 percent from 2010-2011. The **marketing year** began with \$3.18 per bushel in July and ended with \$3.78 per bushel in June. The average monthly prices for the 2012 **calendar year** ranged from a high of \$4.15 per bushel in December to a low of \$3.51 in January.

The 2011-2012 marketing year average price received for **all hay** was \$130 per ton, increasing almost 22 percent from the last year. Average monthly prices for the 2012 **calendar year** ranged from a high of \$206 per ton in September to a low of \$128 in May.

The definition of a farm is "any place from which \$1,000 or more of agricultural products were produced and sold, or normally would have been sold, during the year". This definition has remained the same since 1974. Government payments are included in sales. Ranches, institutional farms, experimental and research farms, and Indian Reservations are included as farms. Places with the entire acreage enrolled in the Conservation Reserve Program (CRP), Wetlands Reserve Program (WRP), or other government programs are counted as farms.

The 2007 Census of Agriculture showed a significant increase in the number of farms, and reversed the downward trend that was shown in the annual estimates of Farm Numbers since the 2002 Census of Agriculture. NASS believes some of the increase is due to methodological changes allowing NASS to more accurately count small farms in the 2007 Census. The 2007-2012 farm number estimates reflect adjustments in the number of farms based on estimates produced by the 2007 Census of Agriculture.

Corn Seasonal Progress, Iowa, 2012

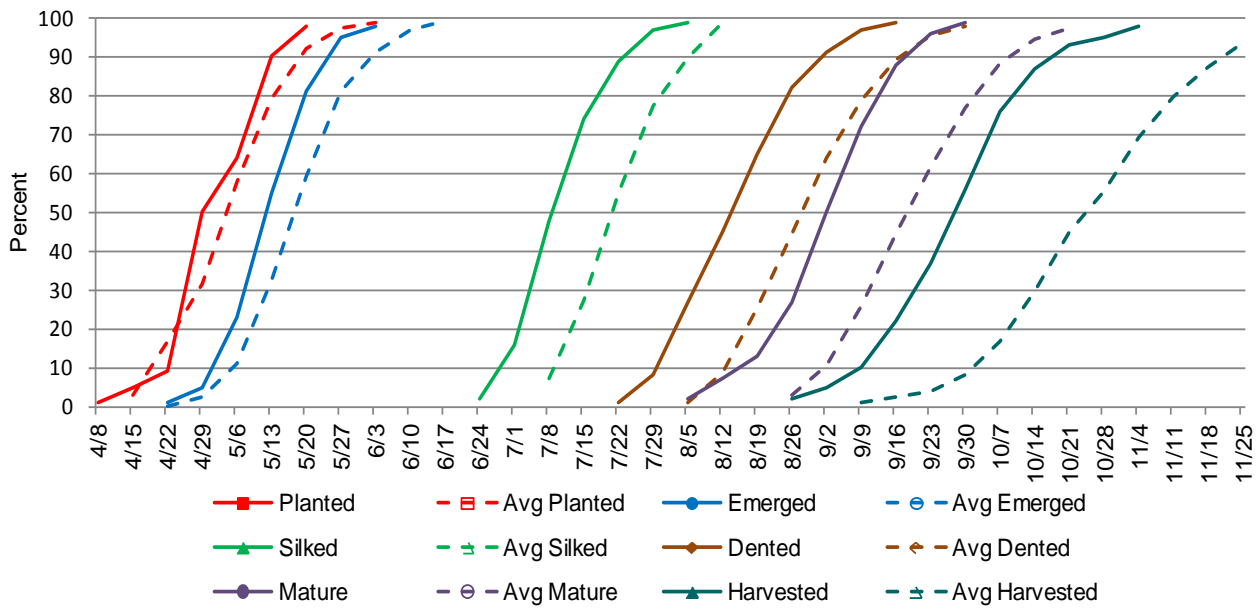

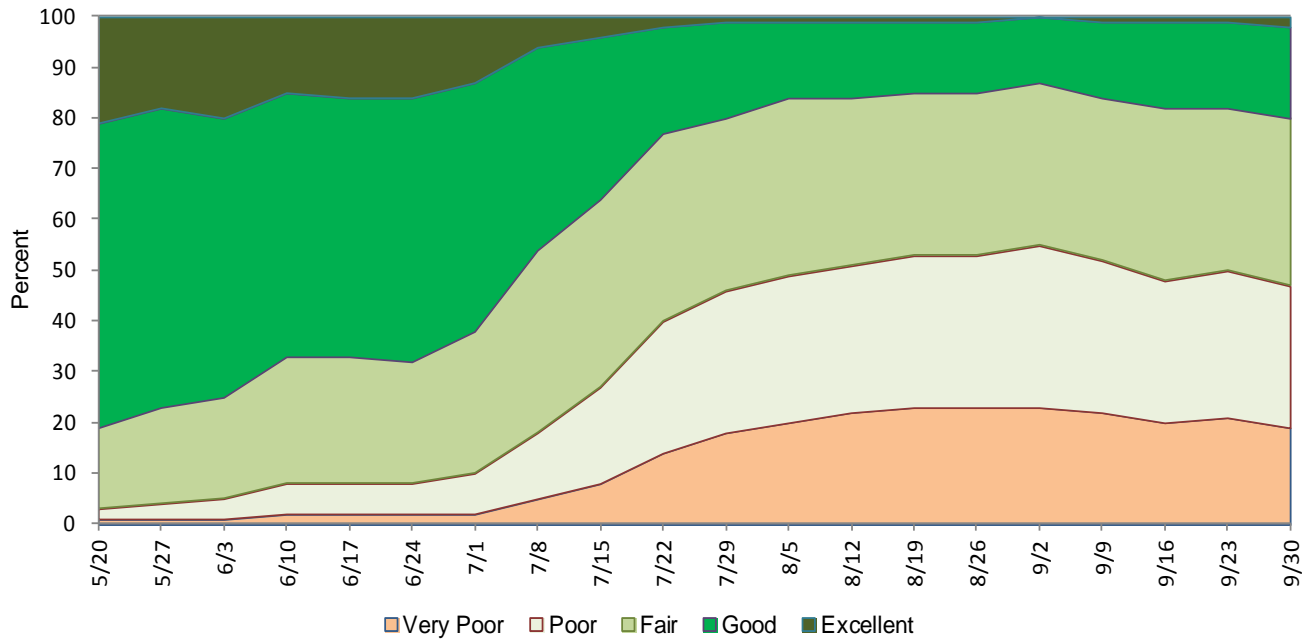

Chart shows percent of crop in or past designated stage. Five-year average includes 2007-2011.

Corn Condition, Iowa, 2012

Crop Condition: The following definitions are used when evaluating crop condition.

Very Poor: Extreme degree of loss to yield potential, complete or near crop failure.

Poor: Heavy degree of loss of yield potential which can be caused by excess soil moisture, drought, disease, etc.

Fair: Less than normal crop condition. Yield loss is a possibility but the extent is unknown.

Good: Yield prospects are normal or above. Moisture levels are adequate with only light disease and insect damage.

Excellent: Yield prospects are above normal and crops are experiencing little or no stress.

Corn Stocks: Storage on Farms, and Total by Quarter, Iowa and U.S.

Objective Yield Data Corn for Grain, Iowa

The National Agricultural Statistics Service conducts objective yield surveys in randomly selected plots in corn for grain fields. These fields are visited monthly from August through harvest to obtain specific counts and measurements. Data in these tables are rounded actual field counts from this survey.

Biotechnology Varieties, Iowa and U.S.

USDA, National Agricultural Statistics Service conducts the June Agricultural Survey each year. Randomly selected farmers across Iowa are asked if they planted corn seeds that, through biotechnology, are resistant to herbicides, insects, or both. Conventionally bred herbicide resistant varieties were excluded. Insect resistant varieties include only those containing bacillus thuringiensis (Bt). Stacked gene varieties include those containing biotech traits for both herbicide and insect resistance.

Soybean Seasonal Progress, Iowa, 2012

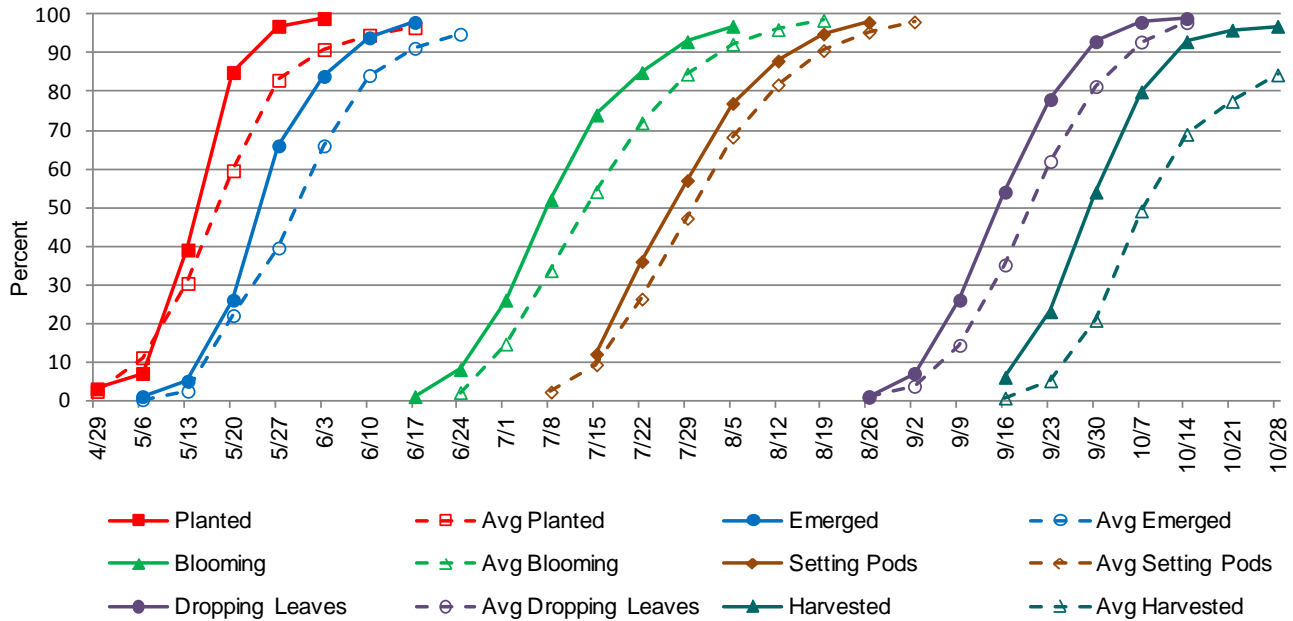

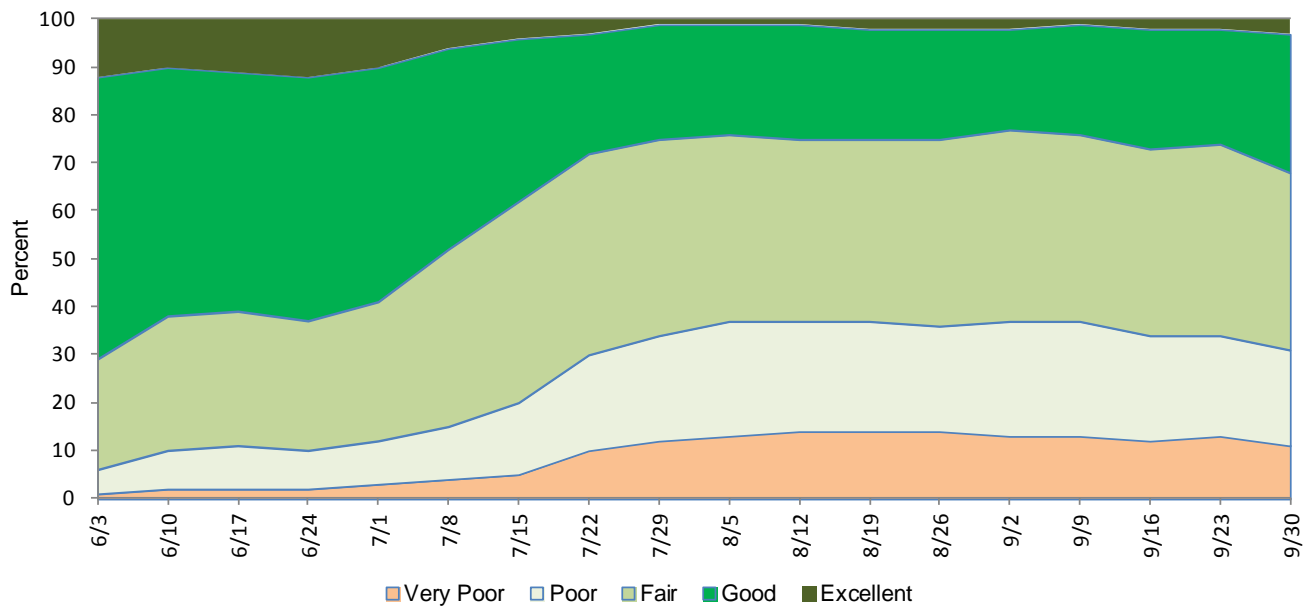

Chart shows percent of crop in or past designated stage. Five-year average includes 2007-2011.

Soybean Condition, Iowa, 2012

Crop Condition: The following definitions are used when evaluating crop condition.

Very Poor: Extreme degree of loss to yield potential, complete or near crop failure.

Poor: Heavy degree of loss of yield potential which can be caused by excess soil moisture, drought, disease, etc.

Fair: Less than normal crop condition. Yield loss is a possibility but the extent is unknown.

Good: Yield prospects are normal or above. Moisture levels are adequate with only light disease and insect damage.

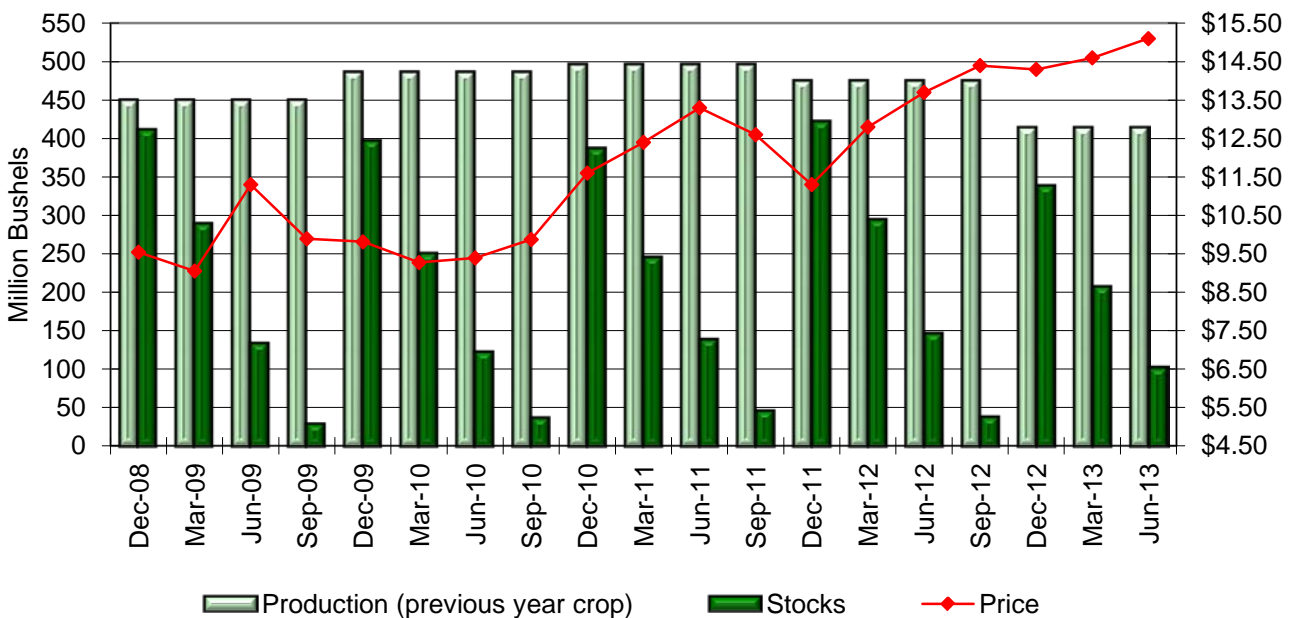

Excellent: Yield prospects are above normal and crops are experiencing little or no stress.

Soybean Stocks: Storage on Farms, and Total by Quarter, Iowa and U.S.

Objective Yield Data Soybeans, Iowa

The National Agricultural Statistics Service conducts objective yield surveys in randomly selected plots in soybean fields. These fields are visited monthly from August through harvest to obtain specific counts and measurements. Data in these tables are rounded actual field counts from this survey.

Soybean Production and Prices Received by Farmers, Crop Marketing Year, 1997 - 2012

Biotechnology Varieties, Iowa and U.S.

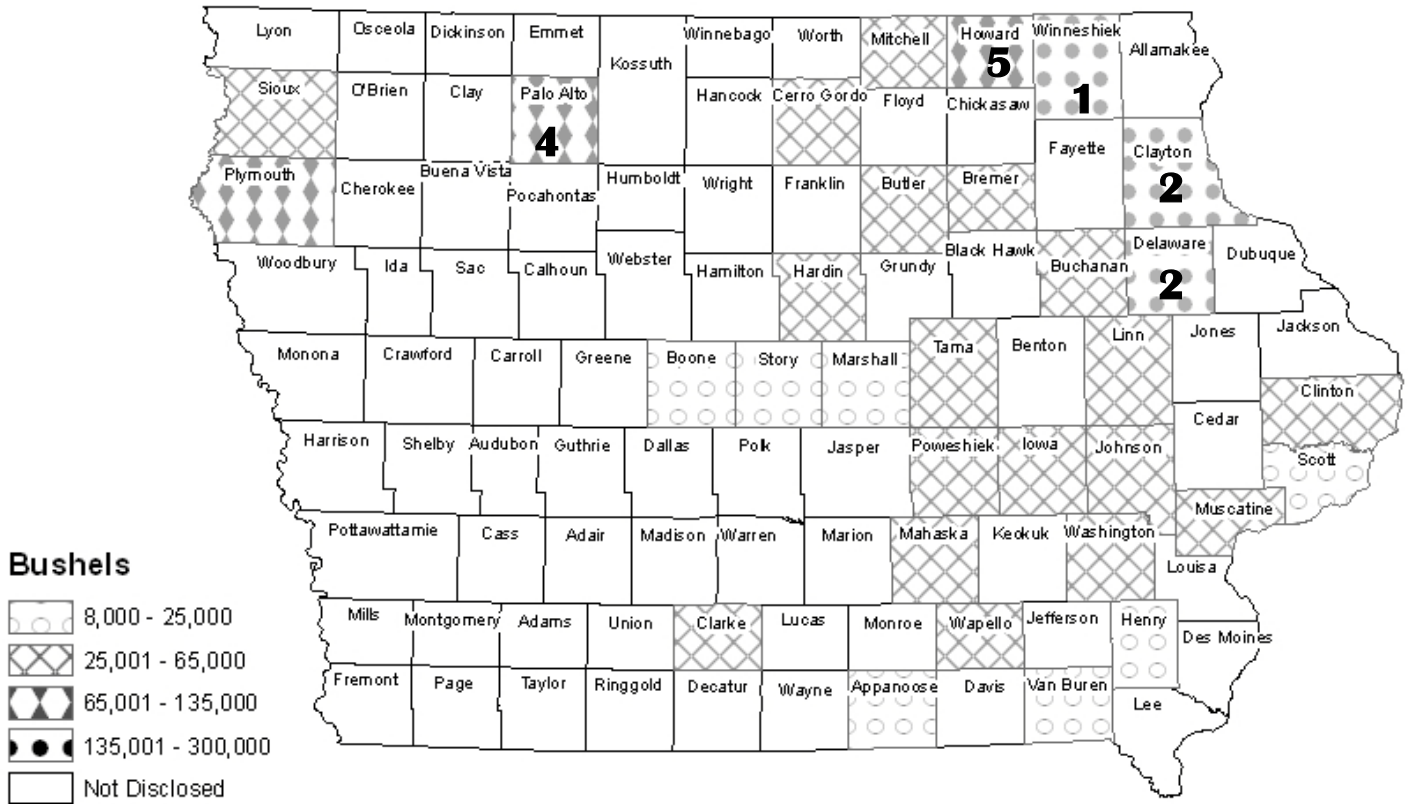

USDA, National Agricultural Statistics Service conducts the June Agricultural Survey each year. Randomly selected farmers across Iowa are asked if they planted soybean seeds that, through biotechnology, are resistant to herbicides. Conventionally bred herbicide resistant varieties were excluded.

¹Honey producing colonies are the maximum number of colonies from which honey was taken during the year. It is possible to take honey from colonies which did not survive the entire year. ²Stocks held by producers. ³Average price per pound based on expanded sales. ⁴Value of production is equal to production multiplied by average price per pound. ⁵Due to rounding, total colonies multiplied by total yield may not exactly equal production.

¹ Number of farms reporting item divided by total number of farms. ² The average per farm is computed by dividing the line-item total expense by the total number of farms. Totals may not add due to rounding. ³ Includes landlord and contractor share of farm production expenses. Totals may not add due to rounding. ⁴ Includes purchases and leasing of livestock and poultry. Intra-state and inter-state transfers of livestock are captured. ⁵ Includes all crop custom work, veterinary custom services, transportation costs, marketing charges, insurance, leasing of machinery and equipment, utilities, general and miscellaneous business expenses. ⁶ Includes cash rent paid, share rent, plus public and private grazing fees. ⁷ Includes material and application costs. ⁸ Includes bedding and litter, marketing containers, power farm shop equipment, oils and lubricants, temporary fencing, miscellaneous non-capital equipment and supplies, repairs and maintenance of equipment not depreciated, and other small, non-capital equipment. ⁹ Includes all expenditures related to new construction or repairs of buildings, fences, operator dwelling (if dwelling is owned by operation), and any improvements to physical structures of land. ¹⁰ All purchases of seed, plants, or seed treatments for nursery and farming operation are included. Bedding plants, nursery stock, and seed purchased for resale are excluded.
