MESSAGE FROM THE PRESIDENT IOWA FARM BUREAU

The Iowa Farm Bureau Federation (IFBF), the state's largest grassroots farm organization, is pleased to work with the U.S. Department of Agriculture's National Agricultural Statistics Service (NASS) in printing this book. The information compiled will help guide decisions of policymakers, legislators, business investors, farmers and other stakeholders.

This Iowa Agricultural Statistics book provides an overall picture of agriculture in Iowa and also includes a county-by-county breakdown of information, including a snapshot of localized statistics.

IFBF believes it's essential to make Iowa agricultural information accessible to the public, knowing the valuable data is used for informed decision making that forms public policy. As farmers and other stakeholders invest resources into

developing new uses and exploring new markets for agricultural commodities, access to accurate information about current markets is critical. The data in this book will help identify trends, opportunities and market fluctuations that impact Iowa's ag sector and statewide economy.

The Iowa Farm Bureau would like to thank the farmers who provided NASS the essential information needed for the agency to compile this accurate and unbiased information guide. The data helps the entire agricultural industry plan and prepare for a sustainable future. Today, with advancements in precision agriculture and sophisticated data collection, it is more important than ever that reliable data be publicly available for everyone.

Brent Johnson

Iowa Farm Bureau

Message from the Director
National Agricultural Statistics Service
Upper Midwest Region, Iowa Field Office

The USDA's National Agricultural Statistics Service, Upper Midwest Regional Office is pleased to collaborate with the Iowa Department of Agriculture and Land Stewardship and the Iowa Farm Bureau to provide you with the latest edition of the *Iowa Agricultural Statistics**. This publication is a compilation of the many statistical reports published over the past year that highlight Iowa's vibrant and dynamic agricultural industry.

It provides a statistical profile not only of Iowa agriculture at the state level, but it also includes information for every Iowa County. The most recent ranking of states shows the importance of Iowa agriculture to the nation with Iowa ranked first in:

- Animal Products Export Value
- Corn for Grain Production
- Corn Export Value
- Feeds and Other Grains Export Value
- Total Egg Layer Inventory
- Egg Production
- Hogs and Pigs Inventory & Value
- Pork Export Value
- Pig Crop
- Red Meat Production
- Sows Farrowed
- Commercial Hog Slaughter
- Capacity of On-Farm Storage Facilities
- Total Capacity of Storage Facilities
- Harvested Acreage of Principal Crops
- Field & Miscellaneous Crops Value

Iowa ranked second in:

- Soybean Production
- Soybean Export Value
- Cash Receipts from Marketings
- Farm Production Expenditures
- Oat Production
- Principal Crops Total Value
- Total Value of Agricultural Exports
- Capacity of Off-Farm Storage Facilities
- Net Farm Income

Publication and dissemination of these and other agricultural statistics is only possible with the support of the entire agricultural industry. I want to thank the Iowa farmers who completed their questionnaires on inventories and production, the buyers and processors who graciously provided data on their inventories and purchases, as well as all those who supplied analyses that made the *Iowa Agricultural Statistics* possible. It is only with your assistance that NASS is able to complete its mission of providing timely, accurate, and useful statistics in service to U.S. agriculture.

Thank you for your support and interest in Iowa agriculture. The Upper Midwest Regional Office staff is dedicated to meeting the agricultural data needs of all users. Please contact us anytime with your questions, comments, and requests for information.

Greg A. Thessen, Director

Much of the data used to calculate statistics published by the National Agricultural Statistics Service is collected by a part-time staff of telephone and field enumerators. This enumerator staff is employed by the National Association of State Departments of Agriculture (NASDA) and serves as contract workers for the USDA. The Upper Midwest Regional Office thanks the Iowa enumerators for their contribution and dedication in providing Iowa with the highest quality agricultural information possible.

2023 Iowa Agricultural Overview

Crops and Weather Summary

The 2023 crop season started out with moderate weather and remained that way throughout the month of April, which allowed for 4.0 days suitable for fieldwork, on average, per week for the month. Although pasture regrowth was a little slow, 46 percent of pastures rated good to excellent by April 30. Corn planting was 2 days ahead of the 5-year average with 29 percent of the crop planted by April 30. Soybean planting was a day ahead of the 5-year average with 16 percent of the crop planted. Eighty-five percent of the oat crop was seeded, 2 weeks ahead of the previous year and 6 days ahead of normal.

Ideal conditions the first week of May allowed 41 percent of the expected corn crop and 33 percent of the expected soybean crop to be planted during the week ending May 7, resulting in a total of 70 percent of Iowa's corn crop and 49 percent of soybeans planted. By the end of the following week, oat seeding was virtually complete with 83 percent emerged. As of May 28, 98 percent of the expected corn acres were planted with emergence at 85 percent. Soybeans planted was at 94 percent, just over two weeks ahead of the 5-year average. Soybeans emerged was at 67 percent, eight days ahead of the 5-year average. The first cutting of alfalfa hay began in mid-May, with 52 percent completed by the close of the month.

June saw only scattered precipitation with an average of 6.0 days suitable for fieldwork per week. Ninety-four percent of Iowa's corn crop had emerged by June 4. Soybean planting was nearly complete, while 87 percent of the crop had emerged, twelve days ahead of the 5-year average. As of June 25, oats headed was at 95 percent with oat condition rated 47 percent good to excellent. Seventy-eight percent of the first cutting of alfalfa hay had been completed by June 4, reaching 96 percent complete two weeks later. The first cutting was virtually complete by June 25.

After weeks of dry conditions, some much needed rain fell in July, but farmers still had an average of 5.5 days suitable for fieldwork per week. By July 23, 79 percent of corn was in or beyond silking, three days ahead of the 5-year average, with 19 percent of the crop in the dough stage, four days ahead of the average. Soybean development was five days ahead of the average, with 81 percent of the crop blooming. Thirty-five percent of soybeans were setting pods. Ninety-three percent of oats were turning color or beyond with 36 percent harvested for grain. The second cutting of alfalfa hay reached 86 percent and the third cutting was one-fifth completed.

Days suitable for fieldwork during August averaged 5.8 per week. By August 27, oats for grain harvest was virtually complete. Corn in or beyond dough stage was at 96 percent, eleven days ahead of the average; 62 percent of the crop was in or beyond the dent stage. August began with abundant rainfall, then transitioned to dryer conditions and above normal temperatures. This led soybeans setting pods to reach 94 percent by August 20, one week ahead of normal. By the following week, soybeans coloring was at 15 percent, two days ahead the 5-year average. The second cutting of alfalfa hay was nearly complete by August 6 and the third cutting reached 90 percent complete by August 27, seventeen days ahead of the 5-year average.

Weather conditions were dry for the beginning weeks of September, then above average rainfall was seen as the month progressed. By September 24, corn development was ahead of average with 98 percent of the crop in the dent stage or beyond and 83 percent considered mature. Corn for grain harvest was five days ahead of the 5-year average at 9 percent complete. Soybeans coloring reached 67 percent by September 10, five days ahead the 5-year average. Seventy-five percent of the soybean crop was dropping leaves or beyond by September 24, five days ahead of the average. The third cutting of alfalfa was 98 percent complete on September 10.

Due to mostly above average precipitation, October saw an average of 5.0 days suitable for fieldwork per week. By October 22, 62 percent of the corn crop had been harvested for grain, ten days ahead of the average. Soybean harvest was 10 days ahead of normal as well, with 87 percent of the crop harvested.

By November 5, only 3 percent of Iowa's soybean crop remained to be harvested. By November 19, only 3 percent of Iowa's corn for grain remained to be harvested, twelve days ahead of the 5-year average. The agricultural season concluded with minimal, scattered fields left to be harvested.

Livestock Summary

Iowa's cattle and hog producers received \$14.5 billion in cash receipts during 2023, down \$1.72 billion from 2022. Hog sales accounted for a total of \$9.33 billion, while cattle and calves sales totaled \$5.16 billion.

Iowa producers had 3.45 million cattle and calves on farms January 1, 2024, down 50,000 head from January 1, 2023. Cows that calved accounted for 1.05 million head, down 40,000 head from the previous year. Beef cows, at 810,000 head, were down 40,000 head from a year ago, and milk cows, at 240,000 head, were unchanged.

Iowa had 690,000 heifers weighing 500 pounds and over, down 5 percent from the previous year. Of these heifers, 100,000 head were beef cow replacements, 125,000 head were milk cow replacements, and all other heifers numbered 465,000 head.

Steers weighing 500 pounds or more were up 2 percent from January 2023 at 1.18 million head. Bulls 500 pounds and over were unchanged from January 2023 at 60,000 head. Calves weighing under 500 pounds totaled 470,000 head, up 2 percent from January 2023.

Iowa ranked first in hog inventory in the United States, with 33 percent of the nation's 2023 inventory. Hogs and pigs on hand on December 1, 2023, totaled 25.0 million head, up 900,000 from the previous year.

Pork producers in Iowa farrowed 1.89 million sows from December 2022 through November 2023. An average of 11.70 pigs were saved per litter. The pig crop was 22.1 million, down 5 percent from 2022.

Sheep and lamb inventory on January 1, 2024, was 155,000 head, down 7,000 head from the previous year. An estimated 115,000 lambs were born during 2023.

Iowa milk production totaled 5.92 billion pounds in 2023, up 153 million pounds from 2022. Milk cows on hand were up 6,000 head from 2022, averaging 240,000 head during 2023. The annual average milk produced per cow was 24,679 pounds, up slightly from 2022.

Iowa slaughter plants produced 8.95 billion pounds of red meat (beef, veal, pork, and mutton) during 2023, up 392 million pounds from 2022.

The definition of a farm is "any place from which \$1,000 or more of agricultural products were produced and sold, or normally would have been sold, during the year". This definition has remained the same since 1974. Government payments are included in sales. Ranches, institutional farms, experimental and research farms, and Indian Reservations are included as farms. Places with the entire acreage enrolled in the Conservation Reserve Program (CRP), Wetlands Reserve Program (WRP), or other government programs are counted as farms.

¹Crops included are corn, sorghum, oats, barley, rye, winter wheat, Durum wheat, other spring wheat, rice, soybeans, peanuts, sunflower, cotton, dry edible beans, potatoes, canola, proso millet, and sugarbeets. Harvested acreage is used for all hay, tobacco, and sugarcane in computing total area planted. Includes double cropped acres and unharvested small grains planted as cover crops.

Crop Condition: The following definitions are used when evaluating crop condition.

Very Poor: Extreme degree of loss to yield potential, complete or near crop failure.

Poor: Heavy degree of loss of yield potential which can be caused by excess soil moisture, drought, disease, etc.

Fair: Less than normal crop condition. Yield loss is a possibility but the extent is unknown.

Good: Yield prospects are normal. Moisture levels are adequate and disease, insect damage, and weed pressures are minor.

Excellent: Yield prospects are above normal and crops are experiencing little or no stress. Disease, insect damage, and weed pressures are insignificant.

Objective Yield Data, Corn for Grain – Iowa

The National Agricultural Statistics Service conducts objective yield surveys in randomly selected plots in corn for grain fields. These fields are visited monthly from September through harvest to obtain specific counts and measurements. Data in these tables are rounded actual field counts from this survey.

Biotechnology Varieties – Iowa and U.S.

USDA, National Agricultural Statistics Service conducts the June Agricultural Survey each year. Randomly selected farmers across Iowa are asked if they planted corn seeds that, through biotechnology, are resistant to herbicides, insects, or both. Conventionally bred herbicide resistant varieties were excluded. Insect resistant varieties include only those containing bacillus thuringiensis (Bt). Stacked gene varieties include those containing biotech traits for both herbicide and insect resistance.

Crop Condition: The following definitions are used when evaluating crop condition.

Very Poor: Extreme degree of loss to yield potential, complete or near crop failure.

Poor: Heavy degree of loss of yield potential which can be caused by excess soil moisture, drought, disease, etc.

Fair: Less than normal crop condition. Yield loss is a possibility but the extent is unknown.

Good: Yield prospects are normal. Moisture levels are adequate and disease, insect damage, and weed pressures are minor.

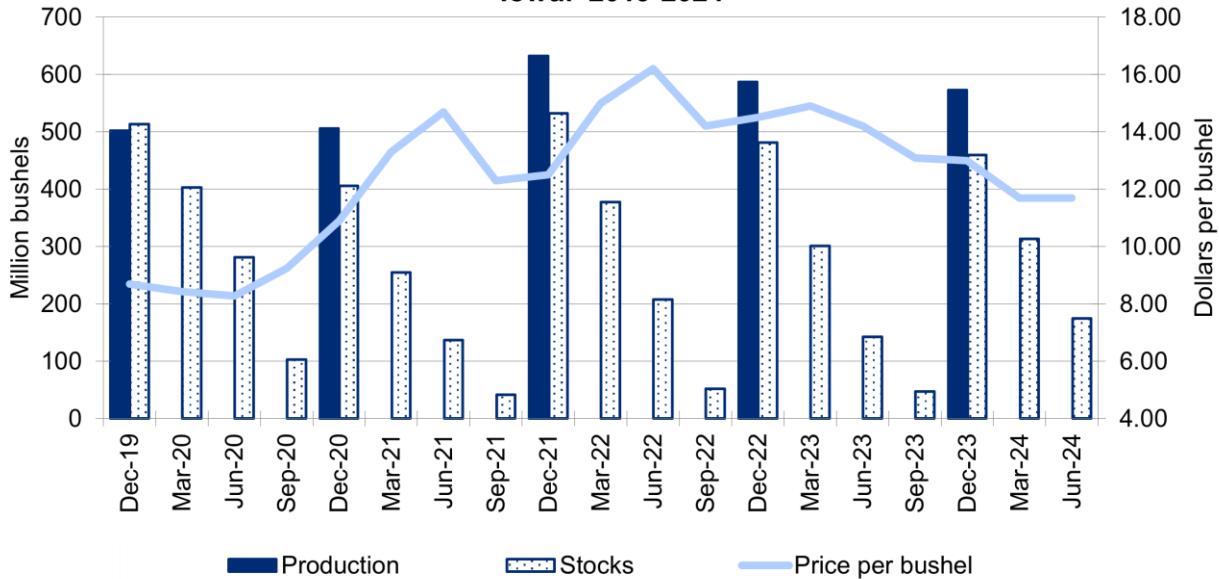

Excellent: Yield prospects are above normal and crops are experiencing little or no stress. Disease, insect damage, and weed pressures are insignificant.

Soybean Production by Year, Stocks by Quarter, and Price by Month Iowa: 2019-2024

Objective Yield Data, Soybeans – Iowa

The National Agricultural Statistics Service conducts objective yield surveys in randomly selected plots in soybean fields. These fields are visited monthly from September through harvest to obtain specific counts and measurements. Data in these tables are rounded actual field counts from this survey.

Biotechnology Varieties – Iowa and U.S.

USDA, National Agricultural Statistics Service conducts the June Agricultural Survey each year. Randomly selected farmers across Iowa are asked if they planted soybean seeds that, through biotechnology, are resistant to herbicides. Conventionally bred herbicide resistant varieties were excluded.

¹ Honey producing colonies are the maximum number of colonies from which honey was taken during the year. It is possible to take honey from colonies which did not survive the year.

² Stocks held by producers.

³ Average price per pound based on expanded sales.

⁴ Value of production is equal to production multiplied by average price per pound.

⁵ Due to rounding, total colonies multiplied by total yield may not exactly equal production.

⁶ United States value of production will not equal summation of states.

¹ Number of farms reporting item divided by total number of farms.

² The average per farm is computed by dividing the line-item total expense by the total number of farms at that level. Totals may not add due to rounding.

³ Includes purchases and leasing of livestock and poultry. Intra-state and inter-state transfers of livestock are captured.

⁴ Includes all crop custom work, veterinary custom services, transportation costs, marketing charges, insurance, leasing of machinery and equipment, utilities, general expenses, and miscellaneous business expenses.

⁵ Includes cash rent paid, share rent, plus public and private grazing fees.

⁶ Includes material and application costs.

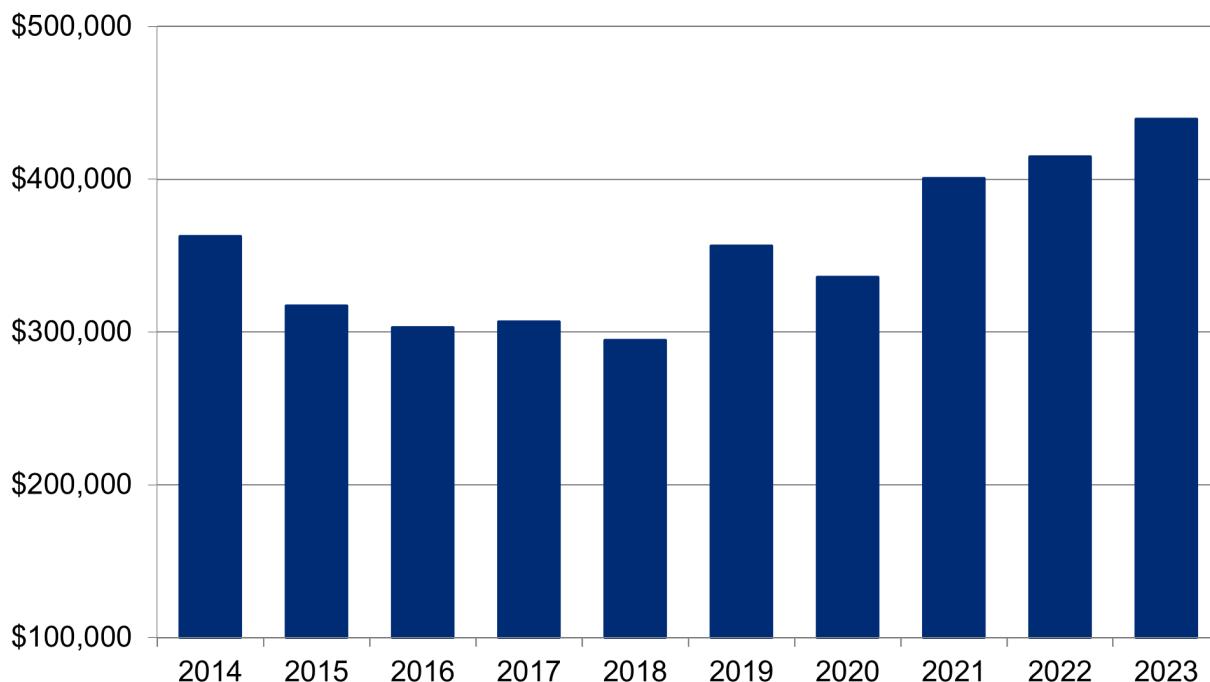

⁷ Includes bedding and litter, marketing containers, power farm-shop equipment, oils and lubricants, temporary fencing, miscellaneous non-capital equipment and supplies, repairs and maintenance of equipment not depreciated, and other small, non-capital equipment.

⁸ Includes all expenditures related to new construction or repairs of buildings, fences, operator dwelling (if dwelling is owned by operation), and any improvements to physical structures of land.

⁹ All purchases of seed, plants, or seed treatments for nursery and farming operation are included. Bedding plants, nursery stock, and seed purchased for resale are excluded.

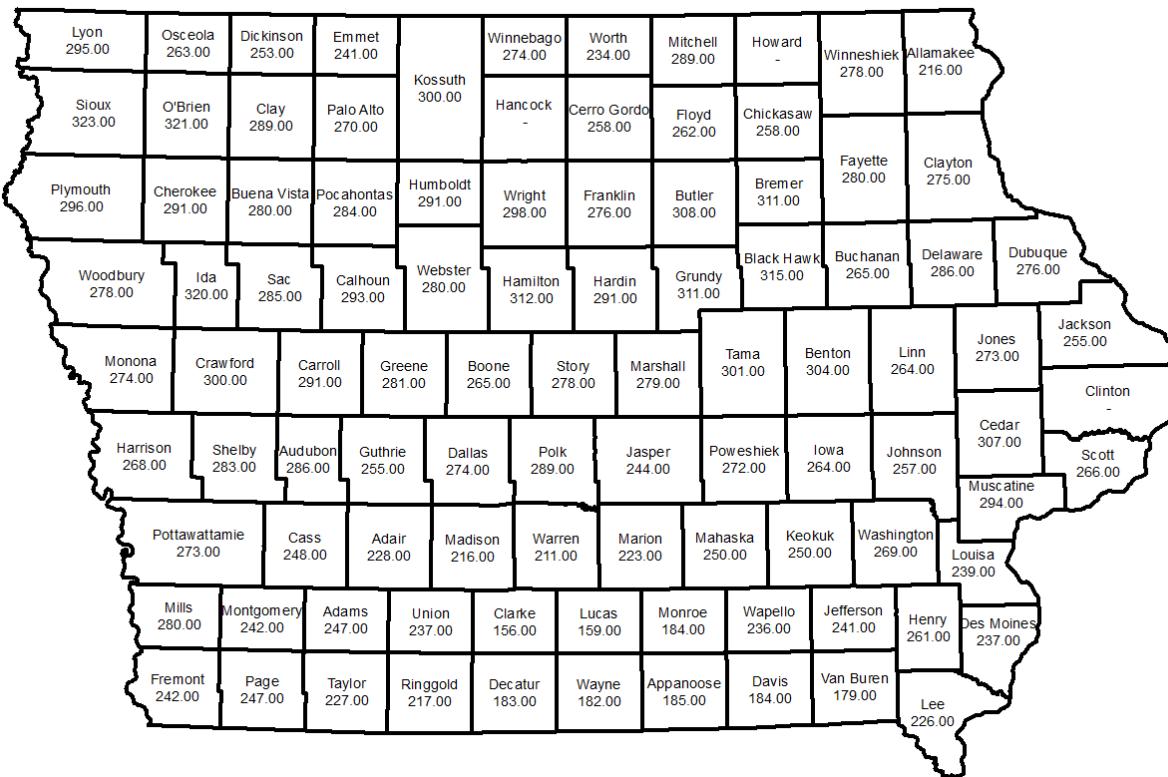

¹⁰ Includes the operator, landlord, and contractor shares of farm production expenses. Totals may not add due to rounding.
