March 15, 2024 - For Immediate Release

Media Contact: Dan Lofthus

Honey production from producers with five or more colonies in Minnesota totaled 6.15 million pounds in 2023 according to the USDA, National Agricultural Statistics Service – *Honey* report. This was 18 percent higher than the 5.20 million pounds produced in 2022. The number of honey producing colonies in the state, at 106,000, was up 4,000 from 2022. This number does not include producers with fewer than five colonies or producers who did not harvest honey. Yield per colony in Minnesota averaged 58 pounds, compared to 51 pounds per colony in 2022. Minnesota ranked 5th nationally in honey production, up from 7th place in 2022. Colonies which produced honey in more than one state were counted in each state where the honey was produced. Therefore, at the United States level yield per colony may be understated, but total production would not be impacted.

On December 15, 2023, producer honey stocks in Minnesota, excluding stocks under government loan programs, were 861 thousand pounds, 18 percent higher than 2022. The state's 2023 honey crop was valued at \$12.2 million, down 16 percent from the previous year's \$14.5 million. The average price per pound for all marketing channels in Minnesota was \$1.99, down 80 cents from 2022.

Honey – Selected States and United States: 2022 and 2023

¹ Honey producing colonies are the maximum number of colonies from which honey was taken during the year. It is possible to take honey from colonies which did not survive the year.

² Stocks held by producers.

³ Average price per pound based on expanded sales.

⁴ Value of production is equal to production multiplied by average price per pound.

⁵ Due to rounding, total colonies multiplied by total yield may not exactly equal production.

⁶ United States value of production will not equal summation of states.

UNITED STATES HONEY

United States honey production in 2023 totaled 139 million pounds, up 11 percent from 2022. There were 2.51 million colonies producing honey in 2023, down 6 percent from 2022. Yield per colony averaged 55.2 pounds, up 17 percent from 2022. Colonies which produced honey in more than one State were counted in each State where the honey was produced. Therefore, at the United States level yield per colony may be understated, but total production would not be impacted. Colonies were not included if honey was not harvested. Producer honey stocks were 44.0 million pounds on December 15, 2023, up 90 percent from a year earlier. Stocks held by producers exclude those held under the commodity loan program.

United States honey prices decreased 16 percent during 2023 to \$2.52 per pound, compared to \$3.01 per pound in 2022. United States and State level prices reflect the portions of honey sold through cooperatives, private, and retail channels. Prices for each color class are derived by weighting the quantities sold for each marketing channel. Prices for the 2022 crop reflect honey sold in 2022 and 2023. Some 2022 crop honey was sold in 2023, which caused some revisions to the 2022 crop prices.

The average prices paid in 2023 for honey bee queens, packages, and nucs were \$19, \$91, and \$120, respectively. Pollination income for 2023 was \$255 million, up 6 percent from 2022. Other income from honey bees in 2023 was \$57.7 million, up 5 percent from 2022.
