This report contains the results from the **Crop Progress and Condition** weekly survey. The survey is completed by county extension agents' visual observations and contact with producers in their county. These data are also posted on our web site at <https://www.nass.usda.gov/ms> and in a more detailed report at <https://www.nass.usda.gov>. Thanks to all of the county extension agents who responded to this survey.

**Week Ending: November 27, 2022**

**Released: November 29, 2022**

### Message from the Editor

This is the **final Mississippi Crop Progress and Condition Report** for 2022. We will resume this report in March 2023. We would like to give special thanks to our County Agents and Mississippi State University Extension Service for their ongoing participation.

According to the National Agricultural Statistics Service in Mississippi, there were 2.8 days suitable for fieldwork for the **week ending Sunday, November 27, 2022**. Topsoil moisture supplies were 3 percent very short, 13 percent short, 72 percent adequate, and 12 percent surplus. Subsoil moisture supplies were 3 percent very short, 17 percent short, 70 percent adequate, and 10 percent surplus.

## Mississippi Subsoil Moisture Map for the week of November 14 – November 20, 2022

The Soil Moisture Active Passive (SMAP) provides measurements of soil moisture in the root zone as a weekly average, represented by pixels. Each pixel represents 9 by 9 kilometer plot or about 20,000 acres. The SMAP data measures soil moisture in cubic centimeters of water/cubic centimeters of soil. The scale represents the percent of water in a given volume of soil. More information and additional mapping is available at <https://nassgeo.csiss.gmu.edu/CropCASMA/>.
