Summary based on NOAA Regional Climate Centers (RCCs) data. DFN = departure from normal. GDD = growing degree days. Precipitation (rain or melted snow/ice) in inches. Air temperature in degrees Fahrenheit. Climate normals used are for the 1981-2010 period. Effective with the October 15, 2017 release the weather data source has been changed. The basic format of the data tables has not changed, but the data content will be based on newer historical datasets used for average calculations and changes methodology subroutines for missing data.
