CROP PROGRESS AND CONDITION WEEK ENDING AUGUST 18, 2024

AGRICULTURAL SUMMARY: Temperatures and precipitation were both varied across the State, according to the Mountain Regional Field Office of the National Agricultural Statistics Service, USDA. Average temperatures were lower in southwestern and south-central portions of Montana, according to data from the High Plains Regional Climate Center (HPRCC). Some areas saw average temperatures fall as many as 4 degrees below normal. In parts of the north and east, average temperatures were as high as 5 degrees above normal. Rainfall levels were in a range of about normal to 0.9 inch above normal in the southwest, parts of the southeast, and in portions of the north. Some areas received higher amounts of rain. For the remainder of the State, moisture levels ranged from slightly below normal to about 0.45 inch below normal. According to data from the U.S. Drought Monitor report released August 15, abnormal dryness was found in 35 percent of Montana, down 3 percentage points. Moderate drought increased slightly from 42 to 43 percent. Severe drought increased 3 percentage points to 15 percent. Extreme and exceptional drought conditions were unchanged at 6 and almost 1 percent, respectively. Thunderstorms with hail and high wind went through various parts of Mineral, Missoula, and Ravalli Counties. Moisture received was minimal in most areas. Ample irrigation water was available for most producers, though reports of shortages were surfacing. Haying moved forward. Some hay was wet from the recent rain. Rain was in the forecast in Prairie County, and was visible on radar, but precipitation was insufficient. Temperatures ran high. Parts of the county remained under 24 percent of normal precipitation for both July and August. Pastures and ranges were showing the effect of the drought. Some producers were supplementing their livestock feed due to the shortage of good grasses. Conditions were also dry in Roosevelt County. Some ranchers were feeding baled hay to cattle on pastures.

CROP AND LIVESTOCK PROGRESS
