## **CROP PROGRESS AND CONDITION WEEK ENDING MAY 25, 2025**

AGRICULTURAL SUMMARY: Seasonal temperatures along with precipitation prevailed across Montana, according to the Mountain Regional Field Office of the National Agricultural Statistics Service, USDA. Much of the State experienced temperatures ranging from 2 to 6 degrees above average, according to data from the High Plains Regional Climate Center (HPRCC). Survey reports from Big Horn County noted much of the area received so much rain that fieldwork was halted. Survey reports from Toole County indicated receiving much needed moisture over the weekend. According to the U.S. Drought Monitor published for May 20, roughly 23 percent of the State was drought free, compared with 23 percent last week. Other drought categorizations included: abnormally dry (D0) at 20 percent; moderate drought (D1) at 34 percent; severe drought (D2) at 22 percent; and extreme drought (D3) at 1 percent. Calving and lambing were both in full swing and were at 77 and 78 percent complete, respectively. The 2025 winter wheat crop was reported as 77 percent good to excellent, an increase of 15 percentage points when compared with last year. Producers remained busy planting spring crops, with progress ahead of normal for most.

NOTE: The Crop-CASMA (Crop Condition and Soil Moisture Analytics) for Root Zone Moisture can be accessed at www.nass.usda.gov/Statistics\_by\_State/Montana by clicking on Crop Progress & Condition. For this data product, the root zone is defined as the top 3.2 feet of soil (approximately 1 meter).
