CROP FINAL ESTIMATES

USDA's National Agricultural Statistics Service (NASS) has published final estimates for Field Crops and Stocks of Grain, Oilseeds, and Hay, including revisions made by the Agricultural Statistics Board (ASB), for the production years 2018-2022 (2015-2023 for Stocks of Grain, Oilseeds, and Hay). This data presents final field crop estimates, including revisions made by the Agricultural Statistics Board (ASB), for the production years 2018-2022 and final stock estimates, including revisions made by the Agricultural Statistics Board (ASB) for the years 2019-2023. Data included in these final publications provide a historic record and a benchmark for current estimates.

Field crop revisions were made after a thorough review of original survey data and all additional data now available, including the 2022 Census of Agriculture. Other data series considered included United States Department of Agriculture farm program administrative records, shipment records, exports, and quantity processed information. Stocks revisions were made after evaluating production revisions made by the ASB. The field crop and stocks of grain, oilseeds and hay estimates are considered final and are not subject to further revisions.

The estimates can be accessed using the QuickStats online database, found here: http://www.nass.usda.gov/Quick_Stats/

If you have any questions, please feel free to contact your USDA NASS State Statistician at 1-800-392-3202.
