STATE OF NEVADA
EXECUTIVE CHAMBER

Capitol Complex
Carson City, Nevada 89710

BOB MILLER
Governor

August 24, 1994

To the People of the State of Nevada:

Nevada agriculture still faces many challenges and is facing some tough economic times. Drought years remind us that we have much to do in developing water storage and promoting water conservation. Likewise, we need to work steadily to maintain water quality, on the farm and ranch as well as in the city. While we strive to increase production and yields we must also dedicate ourselves to protecting and preserving our environment. Additionally, we must ensure that Nevada's farmers and ranchers have fair access to international markets and that we aggressively pursue export opportunities for their products.

Nevada's Agricultural community continues to represent an indomitable work ethic of which we can all be proud. Over the years Nevada's farmers and ranchers have faced difficult challenges, but have persevered to produce bountiful harvests. Back in pioneer days, it took three farmers to feed four people. Today, one American farmer feeds 130 people and we take it for granted there will be food on the table three times a day. If we don't want to go back to squeezing our own living out of the soil, we need to be sure that agriculture remains a viable enterprise.

Sincerely,

BOB MILLER
Governor

To Friends of Agriculture:

The return of drought, in addition to the myriad of every-changing economic factors, make farming and ranching in Nevada extremely challenging. Nevada farmers and ranchers are among the rugged and resourceful individuals in business anywhere. Nevada Division of Agriculture works to help preserve the viability of farming and ranching in this State, while encouraging prosperity in the industry.

We support Nevada Agricultural Statistics and recognize the need for unbiased, accurate information about the industry. Current data, as well as historical trends, are critical to the management of farm related programs at the farm, state, and national levels. Nevada Division of Agriculture will continue to work hard for Nevada Agriculture and wish for good weather and fair markets for Nevada farmers and ranchers in the coming year.

Sincerely,

A handwritten signature in cursive script, appearing to read "Tom", written in dark ink.

It is my pleasure to present Nevada Agricultural Statistics, summarizing Nevada agricultural production, disposition, and value during 1993. These data provide reliable measures of production and value which are essential to business and industry planning. "Thank you" to the many Nevada farmers and ranchers and those associated with agriculture who provided the majority of the information used to prepare these statistics. Publication of Nevada Agricultural Statistics is made possible through the cooperation of Nevada Division of Agriculture, University of Nevada, Reno College of Agriculture, and National Agricultural Statistics Service, U.S. Department of Agriculture.

Nevada agricultural producers have faced tough times in recent years due to drought, and although above-normal moisture provided some respite during 1993, the long term drought continues to distress agriculture. Farm numbers have been declining due to economic and resource pressures, and this trend is expected to continue. Accurate, reliable statistics on agriculture will be in increasing demand to monitor changes in the industry, as well as plan for and react to future changes and events.

My appreciation and gratitude is extended to our staff who prepared this bulletin, and to our dedicated field and telephone enumerators who collected most of this information from Nevada farmers and ranchers. I welcome any questions regarding these statistics and would be happy to help meet additional data needs; our office is here to serve agriculture.

A handwritten signature in cursive script that reads "Martin J. Owens".

Martin J. Owens
State Statistician

1993 CROP/WEATHER SUMMARY

JANUARY

Temperatures ranged below normal with precipitation above normal. Good snow cover favored fall seeded grains, but made livestock feeding more difficult.

FEBRUARY

Precipitation was about twice normal for this time of year. Deep snow and cold weather in some areas caused a few problems for calving. Hay supplies remained adequate.

MARCH

Precipitation varied throughout the state with temperatures averaging above normal. Melting snow-pack caused minor flooding. Early field work was in progress and alfalfa fields were greening. Calving neared completion with losses high in some areas due to wet conditions.

APRIL

Temperatures averaged near normal; precipitation light. Producers using surface irrigation water were expected to receive normal water allocations. Planting of spring crops and fall potatoes nearly completed. Calving and lambing neared completion. Livestock moved to spring and summer ranges, and range conditions were reported as mostly good. Shearing was about completed.

MAY

Gusty winds predominated throughout the state most of the month. Precipitation was light and temperatures near normal. Condition of all crops was generally good. First cutting of alfalfa started in central areas; second cutting underway in extreme south. Irrigation water supplies adequate. Ranges generally good condition, best in years. Calving, lambing and shearing mostly completed; livestock movement to summer range continued.

JUNE

Temperatures were generally below normal with cool, windy weather during the first half of the month. Rain and late spring snow fell across the northern areas. Irrigation water supplies were 100 percent adequate. Small grains, alfalfa hay and potatoes were generally in good condition. First cutting of alfalfa hay completed in the north, second cutting well along. Range and pasture conditions 105 percent of normal. Stockwater supplies 100 percent adequate. Livestock reported in good condition.

JULY

Temperatures averaged below normal in central and northern areas, near normal south. Gusty winds prevailed; precipitation light. Small grain, garlic harvest underway; second cutting of alfalfa hay in north, third and fourth cutting in south. Stockwater adequate; livestock, pasture, range conditions mostly good.

AUGUST

Early month temperatures average or above, but by mid to late month below normal all areas; extremes ranged 26 to 113 degrees. Statewide showers and thunderstorms reported; irrigation supply adequate most areas. Hay and garlic harvest continued, grain neared completion, alfalfa seed being combined, potato and onion harvest begun. Livestock condition remained good with adequate stockwater; most ranges still good grazing.

SEPTEMBER

Showers and thunderstorms brought trace amounts of precipitation. Temperature extremes ranged from 15 to 113 degrees. Potato digging about 25 percent complete, garlic harvest 100 percent, other hay harvest 90 percent; small grains and alfalfa seed about done; harvest of onions, corn silage and alfalfa hay continued; planting of garlic and winter wheat underway. Livestock in good condition; movement began to winter range.

OCTOBER

Unsettled weather with scattered showers and cool temperatures. Snow fell at 6,500 ft., with hard freeze mid-month north and east. Harvesting mostly complete; livestock moving to market or winter grazing.

NOVEMBER

Dry conditions, mostly below normal temperatures with some hard frosts and record low temperature records broken. Extremes in temperature ranged from minus 19 to 71 degrees. Supplemental feeding of livestock necessary; livestock reported in good condition.

DECEMBER

Light precipitation first half of month. Strong winds mid-month resulted in record high temperatures extreme west; moderate elsewhere. Widespread precipitation mid-month brought .75 inches to central areas, .46 inches extreme south. Weather mostly dry, clear end of month, light snow in west. Supplemental feeding of livestock continued with hay stocks adequate.

ANNUAL CROP SUMMARY: Nevada 1993

FARM LABOR

During the four survey periods between July 1993 and April 1994 the peak number of farm workers occurred in July when there was a total of 63,000 workers on farms and ranches in the Mountain II Region, which consists of Colorado, Nevada and Utah. The total hours worked by self-employed workers and hired workers was at the highest level during July.

Wage rates were generally higher during the January and April survey periods. The average wage rate for all hired workers, regardless of method of pay or type of workers, was highest in April at \$6.35 per hour. Workers paid on an hourly basis earned their highest wages during October when the average rate was \$5.88 per hour. Field workers received the highest nonsupervisory wage during the October survey period, but livestock workers received the highest wage of any nonsupervisory worker during April.

1993 PESTICIDE AND HERBICIDE APPLICATION SUMMARY

This summary was compiled from information contained in mandatory monthly reports submitted by the 1993 Custom Applicator licensees. Its accuracy is based on these monthly reports, and the data therein does not constitute approval or recommendations by the Nevada State Department of Agriculture or the Nevada Agricultural Statistics Service. This is not a complete summary in that it only contains the chemicals applied by custom applicators. It does not include chemical applications by individual farmers and ranchers who may apply chemicals on their own operations.
