New Jersey Weather and Crop Bulletin

August 10, 2009

Agricultural Weather Advisory For New Jersey And Southeastern Pennsylvania Issued by Rutgers University New Brunswick, NJ 8 am EDT Monday, August 10, 2009

Rainfall amounts tenth of an inch with locally heavy amounts possible each period today, tonight and Tuesday. Winds for spraying west/southwest 5 to 10 mph through Tuesday.

Relative humidity in percent 50 to 60 today, near 100 tonight, 50 to 60 Tuesday. Dew points near 70 through Tuesday. Drying conditions fair today and Tuesday. Some dew, as well as wetting in a showers tonight and Tuesday night. Percent of possible sunshine 80 today, 50 Tuesday.

There is a 30 percent probability of precipitation during the 12 hour period beginning at 8 am and ending at 8 pm that could adversely affect the performance of pesticides that require a rain-free period after application.

Conditions will be unfavorable for cranberry scald today and Tuesday.

Hay cutting runs a slight risk of wetting today and Tuesday along with fairly high humidity levels.

The latest 8 to 14 day outlook for the period August 17, 2009 to August 23, 2009 is calling for temperatures to average above normal and precipitation to average near normal.

Climate summary for the week ending 8am 8/10/09

Temperatures averaged below normal north, and near normal central and south, averaging 70 degrees north, 73 degrees central, and 74 degrees south. Extremes were 90 degrees at Canoe Brook and Toms River on August 6, 2009 and 52 degrees at Charlotteburg on August 9, 2009.

Weekly rainfall averaged 0.44 inches north, 0.26 inches central, and 1.81 inches south. The heaviest 24 hour total reported was 1.87 inches at Hammonton on August 9, 2009 to August 10, 2009.

Estimated soil moisture, in percent of field capacity, this past week averaged 84 percent north, 80 percent central, and 78 percent south.

Four inch soil temperatures averaged 71 degrees north, 74 degrees central, and 76 degrees south.

Peach Harvest Continues

Days suitable for field work, for the week ending Sunday, August 9, 2009, were 5.0. Topsoil moisture was rated as 80% adequate and 20% surplus. Subsoil moisture was rated as 90% adequate and 10% surplus. There were measurable amounts of rainfall for the week in most localities. Temperatures were variable across the Garden State. Activities during the week were planting fall crops, spraying pesticides, and cutting hay. Soybean pod setting progressed and corn conditions were favorable. Vegetables were rated mostly good to excellent as harvesting continued. Tomato development continued to be affected by wet weather conditions. Apple harvest started in the northern district with good crop condition reported. Peach harvesting progressed while blueberries were finishing up.
