FOREWORD

This is the first volume of New Mexico Agricultural Statistics and has been compiled from the best available sources. It is hoped that the data will be a valuable basis for future development of agriculture in New Mexico.

Many requests are received each year for New Mexico agricultural data, especially by counties. These requests come from many sources, such as various segments of industry that are interested in locating in this area. Research people need county data to help in planning their research programs. Financial institutions also are interested and request up-to-date agricultural information. Many agricultural programs are based on county data, and farmers also use this information in planning their production. In the past, New Mexico agriculture has suffered a loss due to inadequate county data.

To meet the many requests and the urgent need for detailed and accurate agricultural statistics, the New Mexico Department of Agriculture entered into a co-operative agreement with the Statistical Reporting Service of the United States Department of Agriculture. The agreement called for the preparation and publication of county estimates of crop production and livestock numbers, including a breakdown by counties of irrigated and non-irrigated acreage and production. The publication also includes in one volume most of the basic historical State agricultural statistics now scattered in innumerable publications.

We plan to publish each year, supplemental county agricultural statistics in order to keep information current.

Wallis Rison

INTRODUCTION

The New Mexico Crop and Livestock Reporting Service is a co-operative endeavor of the New Mexico Department of Agriculture and the Statistical Reporting Service, U.S.D.A. The primary responsibility is the collection and dissemination of basic agricultural data for the State and counties of New Mexico.

Acknowledgement is extended to the many individuals and organizations who have contributed basic information and services. The work of the New Mexico Crop and Livestock Reporting Service would be seriously hampered, if not impossible, were it not for the volunteer reporters and co-operators. Among these are farmers and ranchers, farm organizations, handlers of farm products, dealers in agricultural supplies and services, educational institutions and research workers, Government agencies, county agents, other county officials, and many others. The post office is also an indispensable part of crop and livestock reporting with its assistance in the delivery of survey questionnaires and publications.

To meet the needs of persons requiring information, approximately 180 separate reports are issued each year. These reports may be weekly, quarterly, semi-annual or annual and may be obtained from this office without charge. Following is a list of the more important releases.

1. General Crop Report	Monthly
2. Cotton	Seasonally, monthly
3. Intentions to Plant	March
4. Seed Crops	Seasonally
5. Vegetables	Seasonally
6. Annual Crop Summary	December
7. Grain Stocks	Quarterly
8. Livestock and Poultry Annual Inventory	February
9. Range and Livestock Condition	Monthly
10. Livestock Slaughter	Monthly
11. Cattle on Feed	Quarterly
12. Sheep on Feed	January
13. Calf Crop	Semi-annually
14. Lamb Crop and Wool and Mohair Production	Semi-annually
15. Pig Crops	Semi-annually
16. Chickens Raised	Semi-annually
17. Turkeys Raised	Semi-annually
18. Dairy Cows and Milk Production	Semi-annually
19. Cattle Shipments	Monthly
20. Sheep Shipments	Monthly
21. Bees — Colonies and Honey Production	Tri-annually
22. Prices Received by Farmers	Monthly
23. Number of Farms and Farm Income	Semi-annually
24. Weather, Crop and Livestock Condition	Weekly

New Mexico Agricultural Statistics

1961 CROP SUMMARY

Crop production in New Mexico in 1961 was exceptionally high with yields at record or near record levels for many crops. Yield per harvested acre of the small grain crops, wheat, oats, barley and sorghum set new highs. Average yield of corn was second only to the 1960 Crop. All hay yield was a record high. New high production records were set for barley, sorghum, and all hay. Due to very favorable soil moisture supplies, New Mexico produced the largest wheat crop since 1947.

Winter wheat seedings got off to an excellent start in the fall of 1960. The crop emerged to good stands and made rapid growth with adequate moisture during the fall months.

Rain and snow throughout the State during January sharply increased moisture supplies. In the major dryland farming area of eastern New Mexico soil moisture was the most favorable in many years. Farm activities during the month were limited mainly to scrapping of pecans, pruning fruit trees and a final picking in some cotton fields.

During February, precipitation was below normal but accumulation for the season continued much above normal. Soil moisture was at an ample level and reservoir storages on the Canadian and Pecos Rivers were full. Winter wheat was in excellent condition with growth started as a result of warmer weather. Fall seeded onions and early planted lettuce started growing with land preparation for spring crops well under way by month's end.

By April 1 spring grain planting was complete in the South and was spreading northward. Rainfall continued heavy with precipitation totals running about one-fourth above average for the State and more than double normal over the northeastern plains.

Soil moisture in dryland farm areas and on rangeland declined sharply during April and May. Rainfall was considerably below normal during the two months and high winds were frequent. First cuttings of alfalfa started in southern counties in late April. Cotton planting was near complete the first week of May. By the end of May, planting of grain sorghum and broomcorn had started.

Fairly widespread showers in mid-June were a welcome relief from an extended period of dry weather. A bumper wheat crop began to pour into grain elevators in eastern New Mexico. Dryland wheat harvest was about three-fourths complete by the end of June.

Shower activity during July produced some heavy rains in the north central portion of the State. Moderate to heavy rains also occurred along the eastern border and locally in the southwestern mountains. Hail severely damaged crops in scattered localities of eastern New Mexico. Cotton made good progress and was blooming heavily in late July. Barley and oat harvest was completed during the month except at high elevations in the North. Sweet Spanish onion harvest started the last week of July.

First bales of cotton were picked in Luna and Eddy Counties during the last week of August. However, for the entire State, only a few bolls were open on September 1. Sweet potato harvest began early in Roosevelt County due to high opening prices. Plowing and preparation of land for fall seeding of wheat made good progress. Planting of fall grains was at a peak in early September.

Generally good harvest weather during the fall brought sorghum and cotton crops through to an excellent final production. The first general killing frost occurred November 2.

The 1961 wheat crop, estimated at 8,004,000 bushels was the third highest of record dating back to 1879. This was 71 percent higher than the 1960 crop and nearly 5 times greater than the 1959-60 average production. Yield per harvested acre at 29.0 bushels was the highest of record and compared with 18.0 bushels in 1960 and the ten-year average of 10.5 bushels per acre.

New Mexico Agricultural Statistics

1961 CROP SUMMARY (Continued)

New Mexico farmers produced 9,310,000 bushels of grain sorghum in 1961 — a one percent increase over 1960 and the highest of record. Yield per acre at 49.0 bushels set a new record for the fourth consecutive year, topping by ten bushels the previous high set in 1960. Planting time was generally favorable and moisture was adequate throughout the growing season. An extended frost-free fall enabled most of the crop to reach full maturity.

Production of barley in 1961 at 2,025,000 bushels was 18 percent above the previous year and the highest production on record dating to 1882. Harvested acreage, estimated at 45,000 acres, was 12 percent above 1960 but had been equalled in two previous years. The 1961 yield per acre of 45.0 bushels was a record high and compared with 43.0 bushels in 1960 and the ten-year average of 31.2 bushels per harvested acre.

Oats production in 1961 totaled 468,000 bushels, 15 percent above 1960 and the highest production since 1952. Harvested acreage at 12,000 acres has gradually declined from the 53,000 acres harvested in 1944. Yield per acre was a record 39.0 bushels in 1961 which compared with 34.0 bushels the previous year and 26.2 bushels for the ten-year average.

An estimated 525,000 bushels of corn for grain was produced in 1961. This was about one-fifth below the 1960 Crop and 16 percent less than the ten-year average. The 1961 yield per acre of 35.0 bushels compares with 39.0 bushels the previous year and 21.5 bushels, the ten-year average.

New Mexico cotton production totaled 300,000 bales in 1961. This was 3 percent above the 1960 crop and 5 percent above the ten-year average. The 1961 American-Egyptian crop of 11,600 bales, which is included in the total crop, compares with 12,900 bales produced in 1960. Lint yield per acre at 728 pounds compared with 693 pounds in 1960 and the ten-year average of 644 pounds. Cotton continues as the most valuable crop in the State representing about 45 percent of the total value of all major crops.

Production of broomcorn was estimated at 5,700 tons in 1961. This was 58 percent above the 3,600 tons produced in 1960. The 1961 yield per acre of 325 pounds compares with 220 pounds the previous year and 239 pounds, the 1959-60 average. Total value of the crop was estimated at \$1,881,000 — the highest farm value of record for this crop.

Dry bean production in 1961 totaled 91,000 bags compared with 70,000 bags in 1960 and the ten-year average of 149,000 bags. Harvested acreage had dwindled to 13,000 acres in 1961 from the peak year of 1943 when 256,000 acres of beans were harvested in New Mexico.

Production of all hay in 1961 was estimated at 723,000 tons compared with 653,000 tons in 1960 and the ten-year average of 517,000 tons. Alfalfa hay represented 88 percent of the total production.

The value of major crops harvested in New Mexico during 1961 totaled 119 million dollars. This was 16 percent above the value of production in 1960. Cotton was the leading income producer, making up about one half the value of all major crops. Second and third in order of crop income rank were all hay and wheat.

January 1, 1962 LIVESTOCK AND POULTRY SUMMARY

Cattle and calves on New Mexico farms and ranches totaled 1,221,000 head on January 1, 1962. This represents an increase of 4 percent over the number on hand a year earlier and is 16 percent above January 1, 1958 when cattle inventories had been reduced by a severe drought during the 1950-57 period. Total value of cattle and calves on farms and ranches was \$163,614,000, up 9 percent from the previous year as a result of higher numbers and a higher average value.

Dairy type cattle have continued to decline. The number of milk cows and heifers two years old and over, estimated at 43,000 head on January 1, 1962, continued the downward trend from the peak years of 1943 and 1944 when dairy cows numbered 83,000. The January 1 number was 4 percent below 1960 and the smallest on New Mexico farms since 1911. Milk production per cow reached a record high of 6,420 pounds in 1961. Total milk production for the State at 263,000,000 pounds was 4 percent above 1960 and the largest production since 1944.

All stock sheep numbered 1,139,000 head on January 1, 1962, down 1 percent from the year before. The inventory value of \$13,896,000 was down 15 percent largely as a result of lower value per head. New Mexico marketed 48,314,000 pounds live weight of sheep and lambs during 1961 — the largest total since 1959. Cash receipts totaled \$6,026,000, up 7 percent from receipts of a year earlier. The lamb crop, estimated at 766,000 head, was 9 percent above a year earlier and the largest since 1953. Shorn wool production in New Mexico during 1961 totaled 10,364,000 pounds and was valued at \$4,042,000 — excluding incentive payments.

A total of 48,000 head of goats were clipped in 1961 yielding 235,000 pounds of mohair. Cash receipts from the year's clip at 179,000 dollars was the same as in 1960 but exceeded all other years since 1947. The record number of goats clipped in New Mexico occurred in 1932 when the total reached 250,000 head.

January 1, 1962 numbers of all hogs on farms totaled 52,000 — a decline of 4 percent from the previous year. However, the inventory value of \$1,170,000 was up 3 percent from a year earlier. Hog marketings totaled 12,797,000 pounds live weight bringing cash receipts of \$2,138,000 to the State's farmers. The average price per hundred pounds, although at a relatively low level of \$16.40, was the highest in the past three years.

Commercial production of red meat in New Mexico slaughter plants totaled 54,432,000 pounds during 1961—an increase of 2 percent over 1960. Of the total 1961 production of dressed meat, beef made up 73 percent, pork 21 percent, lamb and mutton 5 percent, and veal 1 percent.

Chickens on farms numbered 942,000 birds on January 1, 1962 showing an increase of 7 percent from the same date a year earlier. Inventory value of chickens at \$1,036,000 was up \$22,000 from the January 1, 1961 value. Chickens raised during 1961 totaled 737,000 or 12 percent more than the previous year. Prices of chickens and eggs were generally lower than in 1960. Egg production in 1961 totaled 152 million eggs, 13 percent above 1960 and the highest of record.
