### NEW MEXICO STATE UNIVERSITY

BOX 3189, LAS CRUCES, NEW MEXICO 88001

NEW MEXICO DEPARTMENT OF AGRICULTURE, AREA 505 646-3007

Office of the Director

#### FOREWORD

New Mexico agriculture is faced with keeping in step with new requirements and needs of the consumer. In addition, allied industries must keep pace with changes in agriculture to meet its needs in order to adequately provide food and fiber to the people of this country and the world.

To assist all concerned, we take pride in presenting Volume VI, Supplement 3 of New Mexico Agricultural Statistics bringing up to date agricultural production by counties and production values of the major crops of New Mexico.

This work is a cooperative program of the New Mexico Department of Agriculture and the Statistical Reporting Service of the United States Department of Agriculture.

## Annual Crop Summary

Cash receipts from crop marketings in New Mexico totaled \$97,240,000 down 4 percent from last year's receipts of \$101,580,000. Realized Net Income per farm increased by 4 percent and is currently estimated at \$8680. This figure excludes changes in inventories and represents average income of the farm and ranch operators. The decrease in cash receipts from crops was mainly due to cotton, wheat, and pecans.

The 1969 wheat production of 5,088,000 bushels was down 33 percent from the 7,625,000 bushels produced in 1968. Acreage for harvest was also down from 305,000 acres in 1968 to 159,000 acres in 1969. Dry, windy weather throughout the spring months of 1969 caused considerable abandonment on dryland acreage. Also many farmers chose to graze their wheat rather than harvest it. With heavy abandonment of dryland wheat resulting in a larger proportion of total production from the irrigated acreage, average yield per acre for all wheat increased from 25.0 bushels in 1968 to 32.0 bushels in 1969.

Total feed grain production of corn, barley, and sorghum grain is estimated at 520,968 tons. This is 3 percent above last year's production of 505,080 tons. The increase in feed grain production resulted from an increase in sorghum grain and corn which more than offset the slight decrease in barley production. Sorghum grain production totaled 16,856,000 bushels, up 4 percent from the 16,182,000 bushels produced in 1968. Acreage for harvest increased from 279,000 in 1968 to 301,000 in 1969. Excellent moisture conditions in late May and early June encouraged farmers to plant more dryland sorghum which accounts for the acreage increase. Yield per acre was down 2 bushels from 1968 and is currently estimated at 56.0 bushels per acre. An increase in percentage of dryland to irrigated harvested acres was the main factor in the slight decrease in yield. Corn for grain production increased from 1,020,000 bushels in 1968 to 1,054,000 bushels in 1969. Harvested acres were unchanged at 17,000 acres. Yield per acre increased from 60.0 bushels in 1968 to 62.0 bushels which is a new record high for New Mexico. Production of barley for grain was down by 164,000 bushels and is currently estimated at 812,000 bushels. Harvested acres decreased from 16,000 acres in 1968 to 14,000 acres in 1969. Yield per acre was down from 61.0 bushels last year to 58.0 bushels per acre in 1969. Unfavorable spring weather hurt yields to some degree as some hail and wind damage occurred prior to harvest.

All cotton production for 1969 is estimated at 157,000 bales, down 19,000 bales from the 1968 crop. Acreage for harvest was down from 151,000 acres in 1968 to 146,000 acres in 1969. Yield per acre continued on a downward trend and is estimated at 517 pounds per acre, down from the 557 pounds per acre produced in 1968. Unfavorable weather, insects, and just generally poor conditions have plagued the cotton farmers for the past few years.

Production of all hay is estimated at 1,063,000 tons, up 14,000 tons from that produced last year. Alfalfa hay represents 89 percent of all hay and the other 11 percent is wild, grain, clo-tim, and other tame hay. The increase in production of all hay was due to the increase in acreage of wild and grain hay. Alfalfa production was down by 4,000 tons due to a decrease in yield from 4.70 tons per acre in 1968 to 4.50 tons per acre in 1969.

Broomcorn production decreased from 4,000 tons in 1968 down to 3,800 tons in 1969. Acreage for harvest was unchanged at 26,000 acres but yield was off 15 pounds per acre and is currently estimated at 290 pounds per acre. Production of peanuts at 17,479,000 pounds was down slightly from the 17,696,000 pounds produced in 1968. Acreage for harvest was down by two hundred acres and presently stands at 7,700 acres. Irish potato production decreased 38 percent from the 774,000 cwt. produced in 1968 due to a decrease in harvested acres. Sweet potato production totaled 33,250 cwt. compared to 44,000 cwt. in 1968. Apple production decreased slightly from 36,500,000 pounds in 1968 down to 30,000,000 in 1969. Hail damaged quality considerably in northern areas. Pecan production estimated at 7,500,000 pounds in 1969 is down 2,500,000 pounds from the record crop in 1968.

## Livestock Summary

Marketings of cattle and calves reached an all time high value during 1969 for New Mexico ranchers and farmers. The cash receipts of \$256,526,000 from cattle and calves exceeded the previous high in 1968 of \$181,087,000. Numerous factors were at work in setting the record level, several of which were higher prices, heavier weights and increased numbers sold.

Expansion of the cattle feeding industry slowed from the previous year but resumed with additional construction of pens since January 1, 1970. The inventory on January 1, 1970 was 209,000 head, equal to the January 1, 1969 level, but well above the 185,000 head on feed January 1, 1968. The tables on pages 36 and 37, showing the number of feedlots by size groups along with marketings and cattle weight group inventories, tells the story of the shift to larger feedlots. The largest increases in number on feed January 1970 occurred in Chaves County and totaled 13,000 head.

The January 1, 1970 inventory of stock cattle was up 3 percent from 1969. The increase was partly the result of ranchers holding back some of their calves in hopes that prices might go up. It also reflects a slight reversal of a trend started several years ago as some operations are now going back to cow-calf operations instead of summer grazing of steers and heifers. The inventory is as of January 1 and does not include the steers and heifers that moved out of state during the heavy October-November shipping season.

The January 1, 1970 inventory of dairy cattle remained unchanged from January 1 the previous year. During 1969 milk production totaled 308 million pounds, a decrease of 7 million pounds from the previous year. Production per cow, however, continued to increase and established a new high of 8556 pounds compared to 8290 the previous year.

Feeder lamb prices were quite favorable to the growers at the end of 1969. Even with a good demand for lambs by surrounding states, several thousand more were on feed in New Mexico than January 1, 1969. A total of 43,000 head were on feed January 1, 1970 compared to 41,000 head January 1, 1969. Stock sheep numbers continued their historical decline during 1969. As of January 1, 1970 there were 834,000 head on hand, 6,000 head less than the previous year. Shorn wool production during 1969 totaled 7,096,000 pounds, 278,000 pounds less than the previous year. Shorn wool produced income for New Mexico growers of \$3,122,000 excluding incentive payments.

Hog inventories remained unchanged from the previous year. There was, however, considerable change within the industry as there was a continuing shift to larger sized operations. Many of the smaller operations went out of business. Expansion in general of the disease-free controlled environment operations took place.

The chicken inventory in New Mexico increased considerably during 1969. Most of the change was attributed to expansion of several producers while others left the industry. The inventory at the close of the year was 1,223,000 head compared to 963,000 a year earlier. Hens and pullets of laying age accounted for 934,000 head of the total.

Red meat production from New Mexico slaughter plants under Federal and State inspection totaled 202,851,000 pounds compared to 190,525,000 pounds during 1968. The number of head slaughtered during 1969 and 1968 respectively are as follows: Cattle: 333,300 and 313,800; hogs: 106,400 and 105,300; sheep: 60,400 and 62,800; calves: 0 and 900.
