Traditionally, farming and ranching have been recognized as the backbone of America. Spectacular advances in technology and increases in efficiency have enabled an ever smaller proportion of the national population to feed and clothe a multiplying urban populace. As the foundation of the highest standard of living ever achieved, the American farmer and rancher has a justifiable claim to an esteem position and fair economic returns for his effort. As the most important industry in the world - production and processing of agricultural products - becomes more complex with current and prospective energy shortages, detailed statistics such as those found in this publication provide farmers, ranchers and agribusiness with the data needed to make wise decisions.

Your New Mexico Department of Agriculture is pleased to respond to the growing need for data by continuing the cooperative effort with the Statistical Reporting Service of the United States Department of Agriculture.

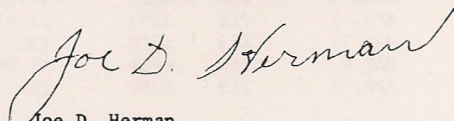

W.P. Stephens
William P. Stephens
Director

UNITED STATES DEPARTMENT OF AGRICULTURE
STATISTICAL REPORTING SERVICE
P. O. Drawer 580, Las Cruces, New Mexico 88001

The growing importance of statistical data in modern agriculture is reflected by the increased demand for information from all segments of agriculture. Agricultural statistics give producers greater bargaining power and marketing knowledge. Statistics aid farmers in planning their production and marketings. Accurate and reliable data offset misleading reports that might be circulated for private gain. In short, statistics provide an unbiased picture of New Mexico agriculture. The facts on present and prospective supplies furnish a sound basis for judgement and action by farmers, businessmen, crop and livestock industries, and Government agencies.

Our work is directly dependent on the voluntary cooperation of hundreds of New Mexico farmers and agribusinessmen who provide the raw data. Their response to our numerous and sometimes lengthy questionnaires is sincerely appreciated.

This publication is a result of a cooperative effort of the New Mexico Department of Agriculture and the Statistical Reporting Service of the United States Department of Agriculture.

Joe D. Herman
Agricultural Statistician In Charge

ANNUAL CROP SUMMARY - 1974

A spring and early summer drought adversely affected 1974 spring crop plantings and summer crop growth in New Mexico. Heavy, late summer and early fall rains lowered yield and quality of fall harvested crops. Cash receipts from crop marketings totaled 175.3 million dollars in 1974, up 6 percent over the previous year cash receipts. Farms numbered 11,800 and accounted for 47,200,000 acres in 1974, unchanged from 1973.

All cotton production totaled 160,600 bales from 154,500 acres harvested in 1974, up from the 145,800 bales and 144,700 acres harvested during the previous year. Upland cotton yield at 509 pounds per acre was down 5 pounds from the 1973 yield of 514 pounds per acre. American-Pima cotton yield averaged 417 pounds per acre compared to the previous year yield of 265 pounds per acre.

Sorghum grain production at 8.8 million bushels represented a decrease of 55 percent from the 1973 production. Acres harvested in 1974 totaled 220,000 while yield averaged 40.0 bushels per acre. Acres harvested during 1973 totaled 363,000 and yield averaged to 54.0 bushels per acre.

Hay production for 1974 at 915,000 tons was down 86,000 tons from the previous year's production. Average yield per acre computed to 3.45 tons, compared to 3.63 tons per acre yield for 1973. Acres harvested at 265,000 were down 11,000 acres from the previous year acreage of 276,000. Summer rains blackened some hay laying in windrows. Alfalfa hay production represented 93 percent, or 847,000 tons of the total production. Acres harvested for alfalfa totaled 197,000 while yield averaged to 4.30 tons per acre.

Wheat production for 1974 is estimated to be 2,835,000 bushels, a decrease of 67 percent from 1973. Yield averaged to 17.5 bushels per acre, down 12.0 bushels from the previous year. Acres harvested for grain in 1974 totaled 162,000 compared to 289,000 acres harvested for grain in 1973.

Barley grain production decreased 40 percent from 1973. Production of 940,000 bushels from 20,000 acres harvested in 1974 compared to 1,560,000 bushels from 26,000 acres harvested during the previous year. Yield averaged to 47.0 bushels per acre, down 13 bushels from 1973.

Corn for grain produced in 1974 totaled 2,695,000 bushels, up 54 percent over the 1973 production. Acres harvested for grain at 35,000 acres were up 10,000 acres, or 40 percent over the previous year. Yield averaged to 77.0 bushels per acre, an increase of 7.0 bushels over 1973.

Apple production for 1974 totaled 6 million pounds, compared to 42 million pounds produced in 1973. Pecan production totaled 13.2 million pounds - up 4.7 million pounds over the previous year. Peanut production was down 5,414,000 pounds or 29 percent from 18,942,000 pounds produced in 1973 to 13,528,000 pounds for 1974. Acres harvested for nuts totaled 7,600, representing a 100 acres decrease from the previous year. Peanut yield averaged to 1,780 pounds per acre compared to 2,460 pounds per acre for 1973. Potatoes produced in 1974 totaled 840,000 hundredweight from 4,200 acres harvested. The 1973 potato production was 832,000 hundredweight from 3,200 acres. Potato yield computed to 200 hundredweight per acre and compared to 260 hundredweight per acre for 1973. Broomcorn production was 100 tons in 1974 compared to 1,000 tons for 1973. Acres of broomcorn harvested totaled 1,800 - down 2,700 acres or 60 percent from the previous year.

LIVESTOCK SUMMARY - 1974

The livestock industry people will remember 1974 as one of the toughest years they ever experienced. From oversupplies of cattle, to extreme declines in prices coupled with ever increasing costs, to a severe summer drought, everything seemed to have happened all at one time to make it a trying year for cattlemen.

Cash receipts from livestock and livestock products declined 14 percent to 557.3 million dollars in 1974 from 649.1 million dollars in 1973.

The January 1, 1975 inventory of all cattle and calves at 1,720,000 head was 7 percent above the 1,615,000 head estimated a year before. Cow numbers increased 45,000 head to 745,000 head in January 1975 from 700,000 head in 1974. Beef cows totaled 714,000 head and milk cows accounted for the remaining 31,000 head. Heifers weighing 500 pounds and over were estimated at 219,000 head, 2,000 head more than in 1974. Steers weighing 500 pounds and over at 251,000 head, increased 11,000 head from a year earlier. Bulls weighing 500 pounds and over at 46,000 head, increased 8,000 head over the 38,000 head estimated a year earlier. Calves, including heifers, steers and bulls weighing less than 500 pounds, totaled 459,000 head as of January 1, 1975 compared to 420,000 head the preceding year.

Cattle and calves being fed for slaughter market as of January 1, 1975 were estimated at 135,000 head. This figure was the lowest January 1 estimate since 1967 and represented a 42 percent decline from the year before. Marketings out of feed lots totaled 355,000 head during 1974, 46,000 head less than the comparable figure for 1973.

There were 31,000 milk cows in New Mexico as of January 1, 1975, a thousand more than a year earlier. Milk production per cow at 10,903 pounds in 1974 was 303 pounds higher than in 1973. Total milk production, consequently, increased to 338 million pounds in 1974 from 318 million pounds in 1973. Farm value of milk produced was 33,327,000 dollars in 1974 compared to 28,461,000 dollars in 1973.

Sheep and lambs were estimated at 575,000 head as of January 1, 1975. Total population suffered a decline of 97,000 head, or 14 percent, since the 1974 inventory was taken. Sheep and lambs on feed at 25,000 as of January 1, 1975, also experienced a drastic reduction compared to the 52,000 head being fed as of January 1, 1974. A total of 610,000 sheep shorn, averaging 9.9 pounds per fleece, produced 6,010,000 pounds of wool during 1974. Comparable 1973 figures are: 682,000 sheep shorn, 9.4 average fleece weight, and 6,402,000 pounds of wool. Value of production and average price per pound were 3,606,000 dollars and 60 cents for 1974, 5,186,000 dollars and 81 cents for 1973.

Hog and pig numbers, as of December 1, 1974, declined 4,000 head to 66,000 head from 70,000 head a year earlier. Total inventory was valued at 2,574,000 dollars with an average price of 39 dollars per head in 1974; whereas, in 1973, the inventory had a value of 3,640,000 dollars and 52 dollars was the average price per head.

There were a total of 1,207,000 chickens in the State as of December 1, 1974, two percent more than the 1,186,000 chickens on hand December 1, 1973. Hens and pullets of laying age, however, declined 4 percent to 905,000 in 1974 from 942,000 in 1973. Egg production was 197 million eggs for 1974 compared to 208 million in 1973. Cash receipts from eggs sold totaled 9,555,000 dollars in 1974 while in 1973 farmers received 9,792,000 dollars for all eggs sold. Average price per dozen eggs was 58.5 cents for 1974 and 57.6 cents for 1973.

Commercial red meat production from slaughter plants in New Mexico, including Federally and State inspected as well as custom exempt plants, totaled 253.9 million pounds during 1974 up 21.5 million pounds from the 1973 production. Number of animals slaughtered for 1974 and 1973, in that order, were: cattle - 416,000 and 376,500; hogs - 134,100 and 104,800; sheep and lambs - 103,500 and 134,900.
