2022 CHEMICAL USAGE FOR WHEAT

State-level estimates for 2022 chemical usage for wheat are now available, according to the USDA's National Agricultural Statistics Service. The 2022 Agricultural Chemical Use Survey of wheat producers collected data about fertilizer and pesticide use as well as pest management practices in growing wheat. NASS conducted the survey in 22 states that together accounted for more than 93% of the 45.7 million acres planted to wheat in the United States in 2022, including 90% of winter wheat acres and 100% of other spring wheat and 99% of Durum wheat acres. The estimates can be accessed using the QuickStats online database, found here: <https://quickstats.nass.usda.gov>.

A pre-defined query of selected commodities can be found here:
