<sup>1</sup> Value of production based on final State marketing year average price. <sup>2</sup> Forage production includes all forms of harvested hay on a dry equivalent basis. Several assumptions are made to convert haylage and greenchop to a dry equivalent. Haylage production is based on haylage weight at harvest and then converted to dry equivalent production. <sup>3</sup> Figures include only hay that was harvested as haylage or greenchop. Dry baled hay is not included. <sup>4</sup> All Forage is the sum of the following dry equivalents: a) alfalfa hay harvested as **dry hay**, b) all other hay harvested as **dry hay**, c) alfalfa haylage and greenchop, d) all other hay, haylage, and greenchop.

<sup>1</sup> No-Till – A procedure whereby a crop is planted directly into a seedbed not tilled since harvest of a previous crop, or the planting of a crop into sod, previous crop stubble, or a cover where only the intermediate seed zone is disturbed. <sup>2</sup> Other Conservation Tillage – Tillage practices prior to planting which result in a minimum of 30 percent ground cover or residue being retained on the surface following planting. Grass and weed control is accomplished primarily with herbicides. Includes ridge till, strip till, and mulch till. <sup>3</sup> Conventional Till – Systems where 100 percent of the surface is mixed or inverted by plowing, power tilling, or multiple disking. <sup>4</sup> Sum of no-till, other conservation tillage and conventional till percents of total may not add to 100 percent due to rounding. <sup>5</sup> Wheat seeded the previous fall for all intended purposes including grain, cover, silage, hay or any other utilization. <sup>6</sup> Total excludes Alfalfa Seedings. <sup>7</sup> New alfalfa seeded or to be seeded during 2009. <sup>8</sup> Alfalfa seeded acres will be available in January 2010.
