The June acreage estimates in this report are based primarily on surveys conducted the first two weeks of June. These surveys are based on a probability area frame survey with a sample of approximately 1,300 segments or parcels of land (average approximately 1 square mile) in the Southern Plains region and a list probability sample of over 6,000 farm operators. Enumerators contact farmers and ranchers in the segments by phone or in person, while a mix of mail, telephone, internet and in person was used to collect data from the list survey sample.

Data provided by Oklahoma and Texas operators are the foundation of the estimates made for the Southern Plains region. The Southern Plains Regional Field Office would like to thank all farmers and ranchers that responded to these surveys and provided data used to set these important estimates.
