The August row crop harvested, and production forecasts are based on a survey of approximately 2,300 Texas and Oklahoma growers conducted by the Southern Plains Regional Field Office. The survey is conducted primarily by telephone with some use of mail and internet. For Texas cotton, an objective yield survey is conducted in addition to the grower's survey. Actual counts of plants and boll weights are collected from small plots set up in producer fields and are used in conjunction with the results of the grower's survey to forecast yield and production.

Data provided by Oklahoma and Texas operators are the foundation of the estimates for the Southern Plains region. The Southern Plains Regional Field Office would like to thank all farmers that responded to the Ag Yield survey and those who permitted Cotton Objective Yield measurements to be taken from their fields.
