

UTAH AGRICULTURAL Statistics

1986

STATE OF UTAH
OFFICE OF THE GOVERNOR
SALT LAKE CITY
84114

NORMAN H. BANGERTER
GOVERNOR

To the Citizens of the State of Utah:

I welcome this opportunity to make the 1986 Utah Agricultural Statistics available to you. We appreciate your interest in Utah's agriculture.

The statistical data in this year's edition show that agriculture continues to be a significant force in Utah's economy. Agriculture is a basic industry that is vital to all Utahns. Consumers, producers and decision makers will have to continue to work together to address the current problems facing the agricultural sector. This cooperative effort is necessary to insure a healthy agricultural economy which directly affects Utah's citizens.

I compliment the Utah Department of Agriculture and the United States Department of Agriculture's Utah Agricultural Statistics Service for their efforts in compiling this information. The data collected provides an important tool for those making decisions which impact agriculture.

Sincerely,

A handwritten signature in cursive ink that reads "Norman H. Bangerter".

Norman H. Bangerter
Governor

STATE OF UTAH

NORMAN H. BANGERTER
Governor

350 North Redwood Road
Salt Lake City, Utah 84116
(801) 533-5421

MILES 'CAP' FERRY
Commissioner

Dear Friends of Utah Agriculture:

Utah agriculture and agribusiness play a significant role in the Utah economy. The statistics contained in this edition of Agricultural Statistics document the size and scope of Utah's basic industry. But they also reflect the difficulties faced by the agriculture industry because of unstable economic conditions, weather and insect problems plaguing farmers and ranchers.

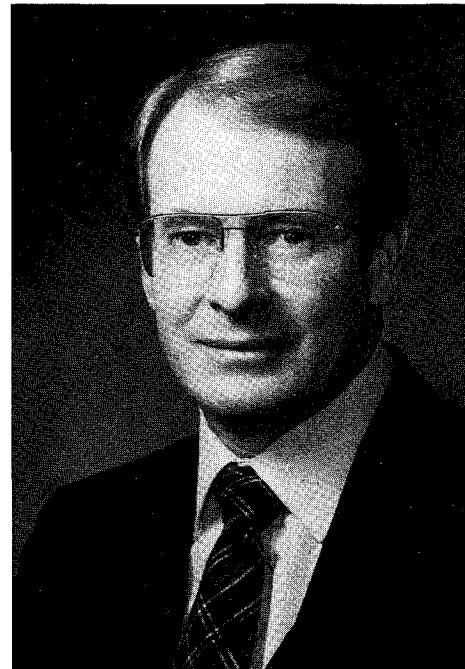

Aided by rising land values and declining interest rates, we expect to see agriculture begin to recover. To assist in that recovery, the Department of Agriculture will help producers find new markets; improve rangeland and watersheds through low interest loans for sound conservation practices; protect their products with effective and comprehensive inspection programs. Through participation in research projects, the Department will address such critical areas as irrigation water management, conservation tillage, alfalfa grading, turkey enteritis, apple maggot, and alternate wildland grass seed development.

Some segments of our industry, such as turkey and fruit production, continue to do well. In other commodities, those entrepreneurs who try new products, new varieties or new methods as a way to stay on their land offer hope for others.

This publication is a cooperative effort of the Utah Department of Agriculture and the United States Department of Agriculture Utah Agricultural Statistics Service. Let all of us in agriculture work together to insure renewed health, prosperity and profitability to this most basic industry - agriculture.

Sincerely,

Miles 'Cap' Ferry
Commissioner of Agriculture

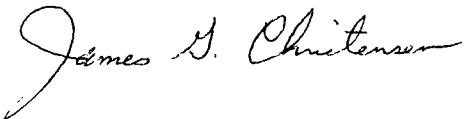

I N T R O D U C T I O N

It is a pleasure to make available the "1986 Utah Agricultural Statistics" publication. Each year the publication is distributed to numerous people interested in agriculture throughout Utah, along with requests from many states and some foreign countries. The data contained in the book help familiarize oneself with the products produced in Utah and the changes over time. The County Estimates section identifies major production areas for various crops and livestock.

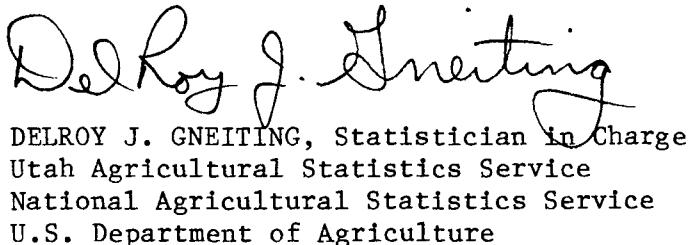

Information contained in this publication ends with the 1985 production of crops and livestock products and January 1, 1986 livestock inventories. Updated information may be ordered from this office by following the instructions on the last page.

It would not be possible to continue the estimating program without the voluntary support of farmers, ranchers, and the various industry groups in Utah. Our thanks to those who complete written questionnaires, or cooperate with our telephone and field enumerators.

Special Note: The Utah Crop and Livestock Reporting Service has recently changed its name. They are now the "Utah Agricultural Statistics Service." Nationally, the agency was called the "Statistical Reporting Service of the United States Department of Agriculture." They have taken the name "National Agricultural Statistics Service of the United States Department of Agriculture." The name change helps to better identify the type of work done by the agency and information available. It also helps bring uniformity to the names used by the 44 State offices.

NUMBER OF FARMS

The United States agricultural sector has become a very efficient but capital intensive industry. For example, using 14 percent less land the average U.S. producer now feeds 77 people compared with 26 people in 1960. Mechanization has been a key component of increasing efficiency, and as producers acquire more efficient equipment, so too do they expand their operations. As a result, farm size in the U.S. has been steadily increasing and now averages 445 acres per farm.

The number of farms in the U.S. has declined steadily since 1975 as has the amount of land in farms. Utah's farm numbers have not followed the U.S. trend, however, and increased steadily from 1975 to 1982; then remained constant until 1985 when several years of weather problems, low prices, and declining land values forced a decline from 14,000 to 13,900 farms. Increasing numbers of small hobby farms during the last decade have been a major factor in Utah's increasing farm numbers. Also, with increasing breakup of agricultural land for residential and commercial development, land in farms in Utah has continued its 25-year decline and now stands at 11.6 million acres. Average size of farms in Utah has declined steadily since 1975 and is estimated at 835 acres for 1985.

UTAH - NO. OF FARMS AND AVERAGE ACREAGE PER FARM, 1900-1985.

1/ 1850-1931 from U.S. Census of Agriculture--1940-82 are USDA estimates.

2/ Record high number of farms in Utah.

3/ Starting in 1975, the figures are based on the "new definition" which is a place with annual sales of agricultural products of \$1,000 or more. Prior to this definition "a farm" included places of 10 or more acres that had annual sales of agricultural products of \$50 or more and places of less than 10 acres that had annual sales of \$250 or more.

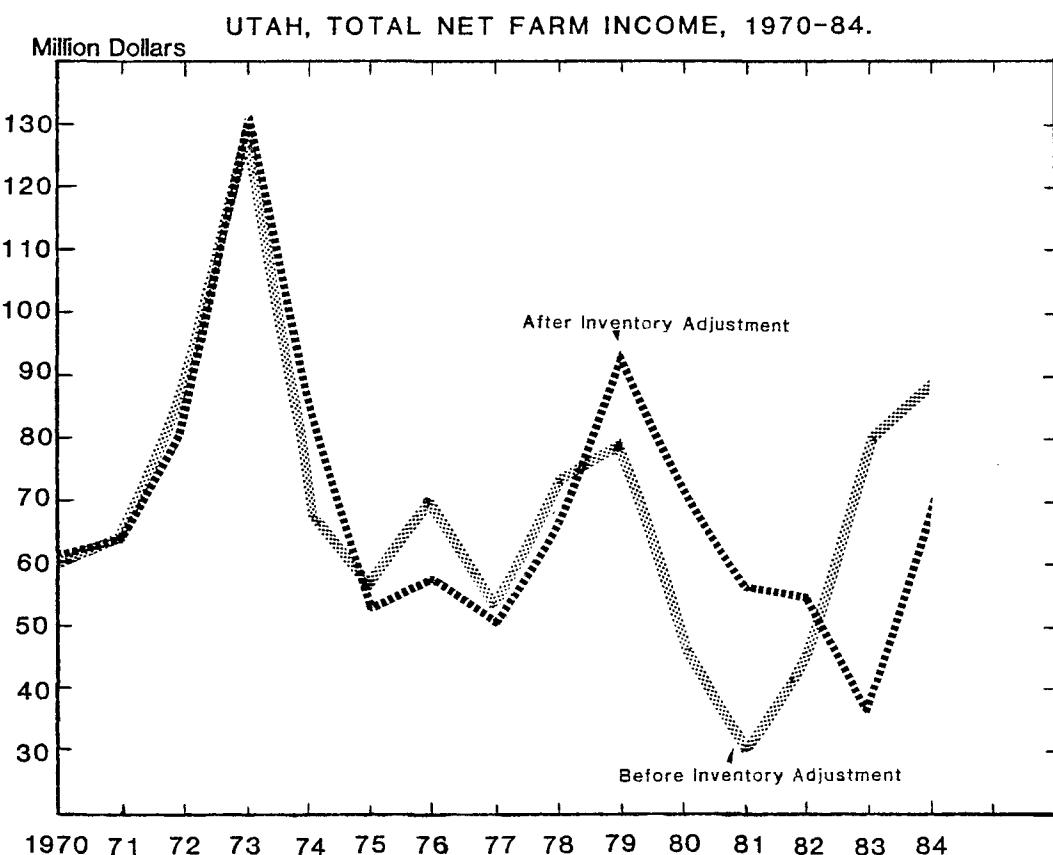

4/ Preliminary.

UTAH AGRICULTURAL STATISTICS 1986

FARM INCOME

Preliminary 1985 cash receipts for Utah farmers and ranchers totaled \$560.2 million, 3 percent below 1984. Receipts from livestock and livestock products, at \$426.4 million, accounted for 76.1 percent of the total receipts; while crops sales contributed \$133.8 million to the total sales. Livestock receipts decreased 4 percent from 1984, and crops decreased 1 percent. Additional details on 1985 cash receipts have not been published by the Economic Research Service at this time.

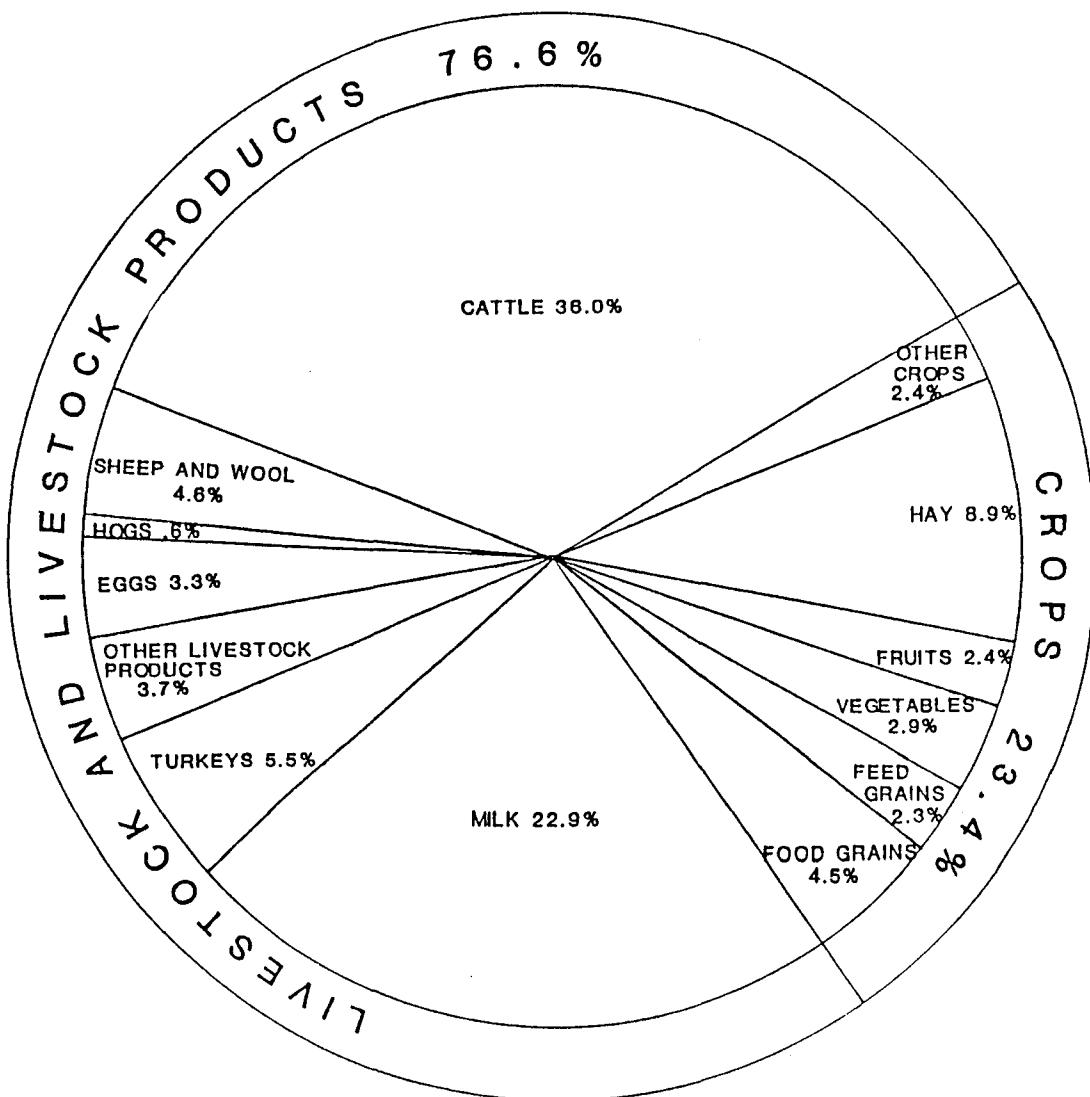

Realized net farm income during 1984, at \$88.3 million, was 12 percent above 1983. The net change in inventories of -20.1 million brings the total net farm income down to \$68.3 million compared with \$36.8 million in 1983. Farm production expenses for 1984 totaled \$645.9 million, up 2 percent from the previous year.

UTAH AGRICULTURAL STATISTICS 1986

The graphic representation of 1984 Utah farm cash receipts shown below provides a picture of the relative contributions of various commodities to the state total. Detailed 1984 data show cattle and calves at the "number one" position. Cash receipts from cattle and calves accounted for 36.0 percent of Utah's 1984 total agricultural cash receipts, while dairy products accounted for 22.9 percent. Livestock and livestock products accounted for 76.6 percent of the total 1984 cash receipts, while crops accounted for the balance of 23.4 percent. Cash receipts from hay sales, with 8.9 percent of total receipts, were the largest crop contributor; wheat sales, with 4.5 percent, were second.

FIELD CROPS

Utah produces a wide range of field crops under varied climatic conditions. Availability of water is the major limiting factor in most areas of the state, with most farms locating on streams or canals or irrigating from wells. Dryland farming is possible where adequate rainfall is received. Much of the crop production in the state supports the production of livestock and livestock products which comprise the largest segment of Utah's agricultural industry.

Once again, fall and winter moisture were more than adequate for most of the state, although flooding and mudslides were much less of a problem than in 1983 or 1984. A relatively mild winter was beneficial to fall seeded crops, and winterkill was not a major problem. Utah experienced a rather typical spring, with showers interrupting planting in many areas. However, most crops were seeded in a timely manner and started off the early summer well. A prolonged hot, dry spell in June and July hurt dryland crops and reduced yields. The major problem for western Utah farmers was the hordes of grasshoppers which arrived early and severely set back or destroyed crops in fields bordering rangeland. An extensive spraying project proved quite successful and helped minimize damage, but for many producers control came too late and losses were substantial. Irrigated crops, however, were not heavily damaged by grasshoppers. Mormon crickets, alfalfa weevil, corn rootworm and aphid caused problems in localized areas. Isolated flooding and hail also caused hardship for some Utah farmers.

The level of the Great Salt Lake kept a number of acres semi-permanently idled, and late spring frosts nipped alfalfa and wheat in the north. Despite all of nature's tricks, crop production was fairly close to normal, but yields were down compared with 1984 for almost all crops. Good fall weather allowed harvest before frost. Small grain and hay harvests benefited from the long, dry summer as rain did not interfere with the harvest.

Hay

Hay continues to be Utah's largest cash crop even though much of the hay stays on the farm where it is produced for use as livestock feed. Utah exports hay cubes to foreign markets, and ships dairy quality hay to much of the western United States.

The long, dry summer was perfect for hay growers, as irrigation supplies were adequate and most first and second cutting hay was put up without rain damage. Alfalfa weevil slowed growth of the first cutting, and spraying was required in many areas. Northwest areas had considerable damage from grasshoppers.

A total of 2.08 million tons of hay was produced from 605,000 acres in Utah during 1985--down 4 percent from 1984. Average yield per acre, at 3.44 tons, was 3 percent below the previous year. Average value per ton was \$67.00 and the crop was valued at \$139.6 million, 8 percent below 1984.

UTAH AGRICULTURAL STATISTICS 1986Winter Wheat

A hot, dry June coupled with grasshopper infestations hurt dryland yields, but the irrigated crop did well. Acreage seeded was equal to the 1984 level of 230,000, but acreage for harvest jumped 25,000 acres totaling 220,000 in 1985 as a relatively mild winter reduced winterkill. Yield per acre averaged 32.0 bushels, down one bushel from 1984 and three bushels below the record yield of 35.0 bushels set in 1983. Winter wheat production, at 7.04 million bushels, was 9 percent above the previous year but 12 percent below the record high production of 1981. Average price was \$3.05 per bushel making the value of 1985 production \$21.5 million, almost equal to 1984.

Spring Wheat

Acres planted to spring wheat rose 13 percent from 1984 and totaled 44,000--acres for harvest climbed 11 percent to 40,000. Producers seeded more dryland continuous crop acreage hoping above average rainfall would continue as it had the last three years. The early summer drought hurt yields and grasshoppers took their share dropping the average yield to 42.0 bushels per acre--3 bushels below 1984 and the lowest yield since 1979. Production rose 4 percent from the previous year to a total of 1.68 million bushels. Average price per bushel, at \$3.00, fell sharply from last year and the value of the crop was \$5.04 million, down 12 percent from 1984.

Barley

Barley production totaled 11.8 million bushels in 1985, up 1 percent from last year and 3 percent above 1983. Harvested acreage was unchanged from 1984, at 159,000, but yield rose one bushel to 74 bushels per acre--well below the record 80 bushels of 1982. With an average value of \$2.25 per bushel in 1985, the barley crop was valued at \$26.5 million.

Oats

About half of the 26,000 acres seeded to oats was harvested for grain with the remainder harvested for hay, a pattern similar to the last few years. Average yield was a record 69 bushels per acre, one bushel above the previous records set in both 1982 and 1983. Production, at 897,000 bushels, was 3 percent above the 1984 level. Price per bushel averaged \$1.70 and value of production was \$1.53 million, 8 percent below last year.

Corn for Grain

The corn crop progressed well during the early summer, but corn rootworm was discovered in central and eastern Utah at mid-summer, and caused light to severe losses. Production of grain totaled 1.84 million bushels, as corn was harvested from 16,000 acres averaging 115.0 bushels per acre. Both yields and production were slightly below 1984 levels. Value of the crop was \$5.15 million, 13 percent below the previous year as the average price per bushel fell 11 percent to \$2.80 per bushel in 1985.

Corn Silage

Corn silage was harvested from 61,000 acres, at an average yield of 20.0 tons per acre--one-half ton below the 1984 record yield. Production of silage totaled 1.22 million tons, down 4 percent from the previous year. Value of production was set at \$26.2 million, with corn silage valued at an average of \$21.50 per ton.

Dry Edible Beans

The long, dry summer stressed Utah's bean crop and reduced yields below the levels of the last several years. Dry beans were harvested from 8,400 acres in 1985--down 10 percent from last year. Yields averaged 480 pounds per acre, down 17 percent from 1984 and the lowest state yield since 1982. Production totaled 40,000 hundredweight (cwt.), 26 percent below the previous year. Average price per cwt., at \$22.50, was up 10 percent from 1984. Production was valued at \$900,000--down 19 percent from last year.

1/ Program changes discontinued the oat stocks estimate for April 1, October 1, and January 1. Estimates will continue for June 1, but only off farm stocks estimates will be published. Utah's "on farm" estimates will be included in minor states. 2/ Includes stocks at mills, elevators, warehouses, terminals, processors, and CCC owned grain at bin sites.

1/ Estimate discontinued. 2/ Program changes have caused Utah's "on farm" stocks estimates to be included in the minor state's estimate. Utah on farm corn stocks will not be published in the future. 3/ Includes stocks at mills, elevators, warehouses, terminals, processors, and CCC owned grain at bin sites. 4/ Not published to avoid disclosure of individual operations.

FRUITS

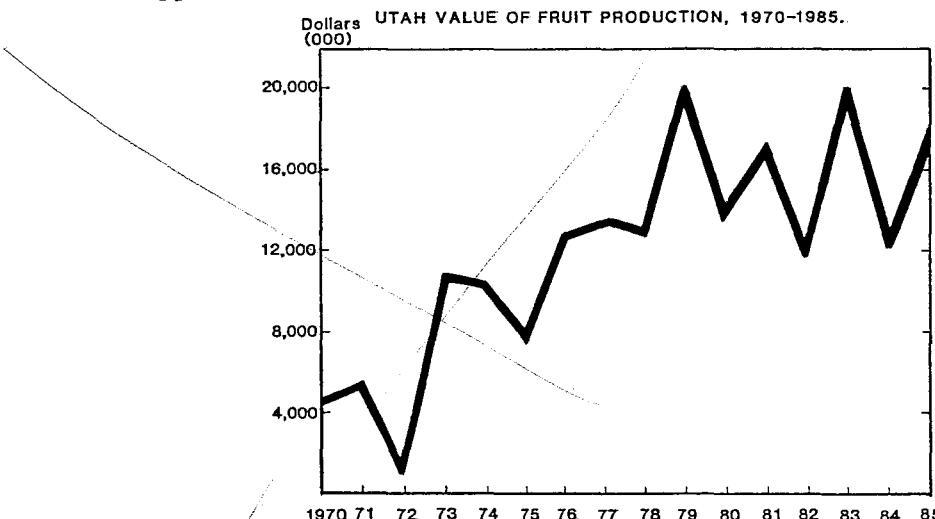

Utah's fruits had varying success in 1985, with bumper apple and tart cherry crops; but modest peach, pear, apricot, and sweet cherry crops. Warm temperatures in early April brought fruit trees across the State into bloom, making some vulnerable to frosts later in the month. Pollination was hampered in some localities by strong winds and rain. Fruit set, as reported in May, was somewhat disappointing in all but hardier fruits--apples and tart cherries.

Harvest of sweet cherries was under way in southern Utah by the first of June, becoming general statewide later in the month. Rains during the last week of June caused considerable splitting in Utah County. Total production was down 48 percent from 1984, but a 58 percent rise in price limited the reduction in value to 14 percent.

Tart cherry and apricot harvests got under way by July 1, winding down by the end of the month. Tart cherry production was up 75 percent from 1984--just 13 percent off the record set in 1983. The average price received for tart cherries was off one cent per pound to 23 cents, making the value of the crop \$4.8 million--68 percent above the previous year. Apricot production was 38 percent above 1984, but 21 percent below 1983. The average price received by growers was up 9 percent to \$380.00 per ton, contributing to an increase in the value of the crop of 48 percent.

Peach and pear harvests were active during August and the first half of September. Peach production was off 8 percent from 1984, but a two cent per pound rise in price to 17 cents per pound made the value of the crop nearly equal to that of the previous year. Pear production was off 22 percent from the year before. The average pear price, at \$294 per ton, was up slightly; but the total value of the crop was still down 18 percent.

Picking of a few early season apples got under way in August, with later varieties maturing in October. The 1985 crop totaled 57 million pounds, 27 percent larger than 1984 and just 1 million pounds shy of the 1983 state record. A sharp increase in price resulted in a new record value for the apple crop--\$8.7 million.

| 1984..... | 4,650 | 1,800 | 899 | 1,881 | 2,879 | 238 | 12,347 |
| 1985..... | 8,730 | 1,785 | 735 | 1,624 | 4,832 | 353 | 18,059 |

Note: Bracketed () figures are record high production since 1967.

1/ The 1972 sweet cherry crop was nearly a complete failure due to spring freezes. A few sweet cherries were produced, but production was too small to warrant a quantitative estimate.

UTAH AGRICULTURAL STATISTICS 1986

VEGETABLES

Onions grown in Utah are predominately of the hard yellow storage type. This type of onion is good for consumption immediately after harvest--during fall in Utah--or it can be stored for consumption in its fresh form through the winter months. The storability of this type of onion offers growers and dealers the option of "waiting on the market", while providing consumers with a year-around supply of onions. Exercise of this option, however, is not always beneficial as the onion market, like those of most fresh vegetables, is extremely volatile.

Utah onion growers had the 1985 crop seeded by May 1 and enjoyed good growing conditions through harvest in September and October. Seeded acreage in the State was down 600 acres from 1984, to 1,700 acres--the lowest level since 1977.

The average yield during 1985 was 450 hundredweight (cwt.) per acre, establishing a new state record by surpassing the 1979 mark of 415 cwt. per acre. This excellent yield, which was bolstered by a high percentage of jumbo sized onions, raised the annual production total 4 percent above that of 1984 despite the reduced acreage. A dismal year of prices and a 75 percent rise in unsold production, however, resulted in a 54 percent drop in value of sales from the previous year. The average price received by Utah onion growers for their 1985 crop was \$3.83 per cwt., the lowest since 1970.

1/ Includes tomatoes, green peas, sweet corn, snap beans, green lima beans, table beets, and cucumbers for pickles. 2/ Record high acreage harvested of vegetables for processing.

CATTLE

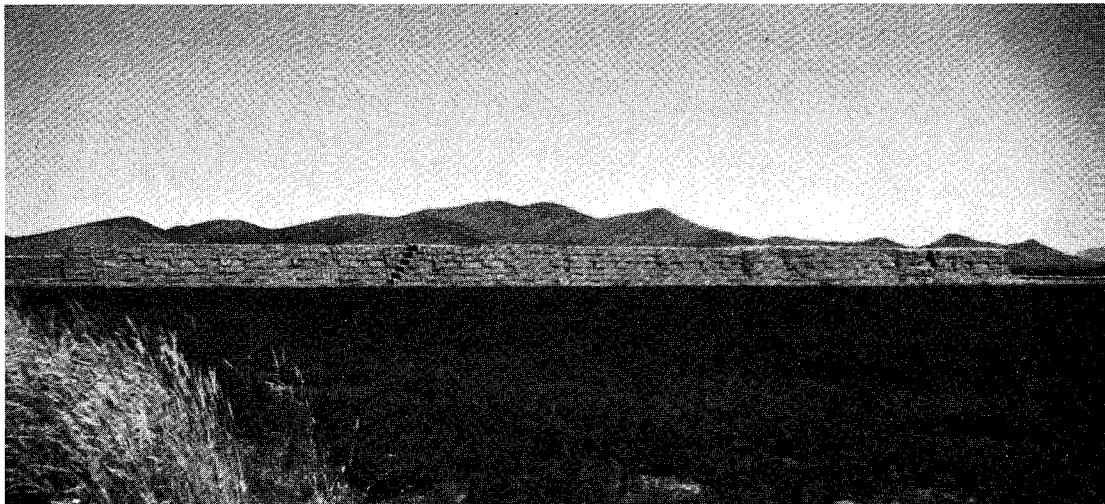

Cattle and calves continue to be the primary source of income for Utah farmers and ranchers. The amount of government land and the abundance of mountain grazing land makes cattle a desirable form of agriculture for the people of the state. Most cattle in the State move from summer pastures high in Wasatch or Uintah Mountain ranges to winter pastures in the lowland areas. Winter forage and grain needs are met by the production of hay and grain in the valleys between the numerous mountain ranges in Utah.

Cash receipts from cattle during 1985 were \$155 million, down 26 percent from 1984. The average price per hundredweight (cwt.) for all cattle was \$53.90 per cwt. in 1985, down \$4.70 per cwt. from 1984. Calf prices were up \$1.20 to \$61.90 per cwt.

Marketings of cattle, at 222,000 head, were 28 percent below 1984; while calf marketings were 89,000 head, 29,000 above a year earlier. The calf crop, at 320,000, was up 10,000 head.

The cattle and calf inventory on January 1, 1986, of 790,000 head was 1 percent below January 1, 1985. Cow numbers for beef and milk were up 3 percent to 380,000 head; beef cows numbered 298,000 head while milk cows totaled 82,000 head. Heifers 500 pounds and over kept for beef cow replacement were down 2 percent from a year earlier to 44,000 head, while milk cow replacements were up 10 percent to 44,000 head. Heifers for other uses were up 10 percent to 34,000 head. The number of heifers, steers and bulls under 500 pounds was 13 percent below the previous year to 176,000 head.

The value of cattle inventories on January 1, 1986, was at the lowest level since 1978. The 790,000 head on farms and ranches January 1, 1986, were valued at \$312 million--down \$4 million from January 1, 1985. Value per head, at \$395, was the same as a year earlier.

1/ Includes slaughter in Federally inspected plants and in other slaughter plants, but excludes animals slaughtered on farms. 2/ First year of record. 3/ Not printed to avoid disclosing individual operations.

DAIRY

Utah's total milk production in 1985, at 1,136 million pounds, was up 9 percent from last year's 1,039 million pounds, but only 3 percent above the five-year average for 1980-84 of 1,102 million pounds. This increase resulted from a 2 percent increase in cow numbers and a 7 percent increase in production over the previous year. Dairy cow numbers averaged 83,000 head during 1985. This was up 2.5 percent, or 2,000 head, from 1984. Production per cow was 13,687 pounds, 7 percent above last year and 3 percent above the 1980-84 average of 13,270 pounds--this is 175 pounds per cow above the previous record high in 1982 of 13,512 pounds. Cash receipts from milk marketings in 1985 totaled \$137.2 million, 3 percent more than 1984.

Production of dairy products in Utah during 1985 showed mixed changes compared with 1984. Total cheese production, at 71.1 million pounds, was 7 percent less than the previous year even though Swiss cheese, at 24.7 thousand pounds, increased 10 percent. Cottage cheese production, at 15 million pounds, was up fractionally from 1984. Butter production was 1.9 million pounds above 1984--an increase of 31 percent. Ice cream production, at 8.7 million gallons, increased by 7 percent.

1/ Essentially all hard frozen.

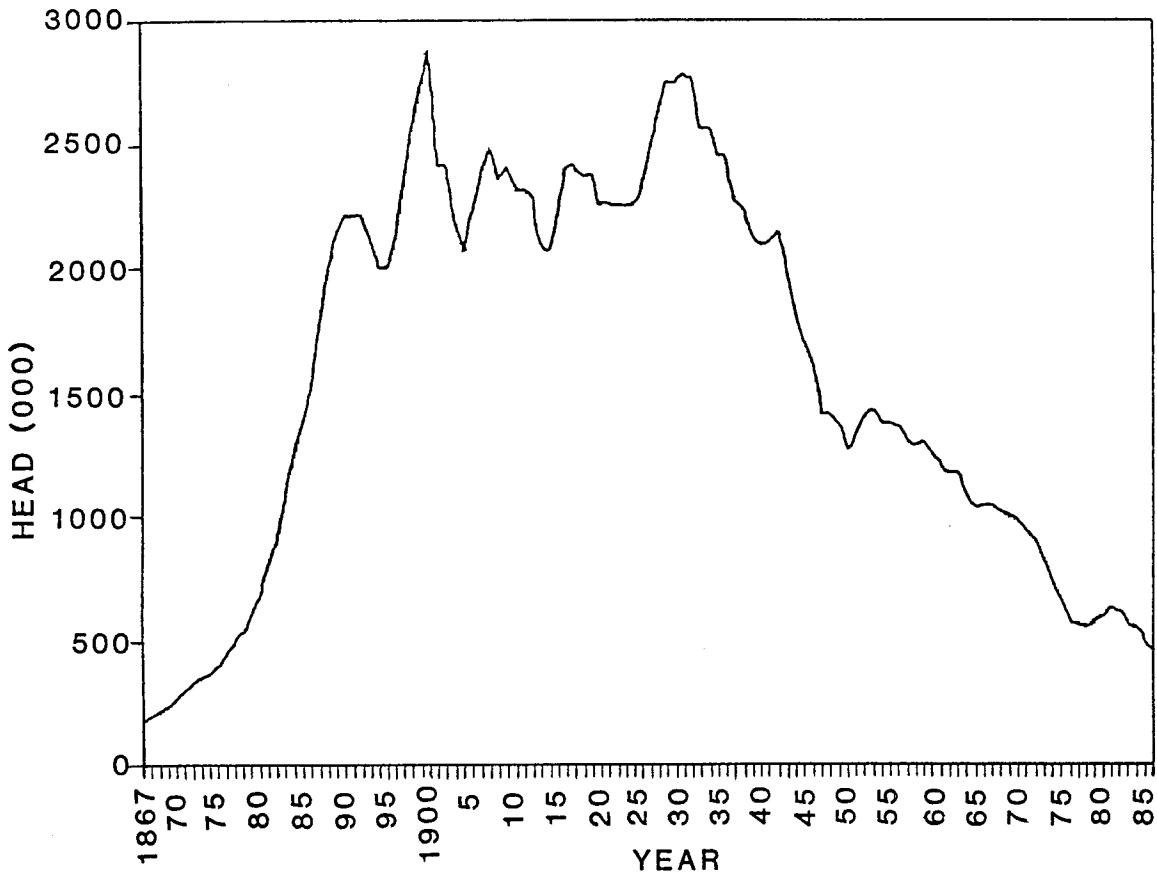

SHEEP AND WOOL

Number of sheep in Utah continues to decline. Total sheep and lambs on farms January 1, 1986, at 484,000 head, was the lowest on record. This is 6 percent less than the 515,000 head recorded January 1, 1985. The 1985 lamb crop totaled 420,000 head, down 2 percent from 430,000 head in 1984, and 8 percent from the five-year average (1980-84) of 455,000 head. Lambs saved during 1985 as a percent of ewes one-year and older on hand at the beginning of the year was 100 percent compared with 92 percent the previous year and 93 percent for the five-year average.

Cash receipts during 1985 totaled \$24,551,000, 13 percent above 1984. Marketings, at 41.9 million pounds, were 8 percent below last year; but prices were significantly higher. The sheep price during 1985 averaged \$18.50 per hundredweight (cwt.), \$4.40 above the 1984 average; and lamb prices averaged \$65.70 per cwt., \$8.00 per cwt. above the 1984 average.

Wool production during 1985 totaled 4.8 million pounds, 12 percent below a year ago. Weight per fleece, at 9.6 pounds, was below the 10.0 pound average over the past five years.

1/ Includes slaughter under Federal inspection and other commercial slaughter,
excludes farm slaughter. 2/ First year on record.

HOGS

Hog and pig inventories totaled 23,000 head on December 1, 1985, off 18 percent from December 1, 1984. This was Utah's lowest inventory on record. The total pig crop of 28,000 head from 4,000 sows was a 13 percent decrease from 1984. This drop was largely the result of an 11 percent decrease in number of sows farrowing, but also from a lower saved pig per litter average. Most of the decrease was in the fall farrowing period, with 500 fewer sows farrowed than the 1984 fall farrowing. The number of sows farrowed in spring 1985 was equal to 1984 spring farrowing, but the number of pigs saved was 6 percent less.

Cash receipts of \$2,841,000 were 22 percent below 1984. Marketings were only 13 percent below a year earlier, at 6,929,000 pounds, but sold for \$4.50 per hundredweight below the 1984 average price.

excludes farm slaughter. 2/ First year on record.

UTAH SOWS FARROWING & PIGS SAVED

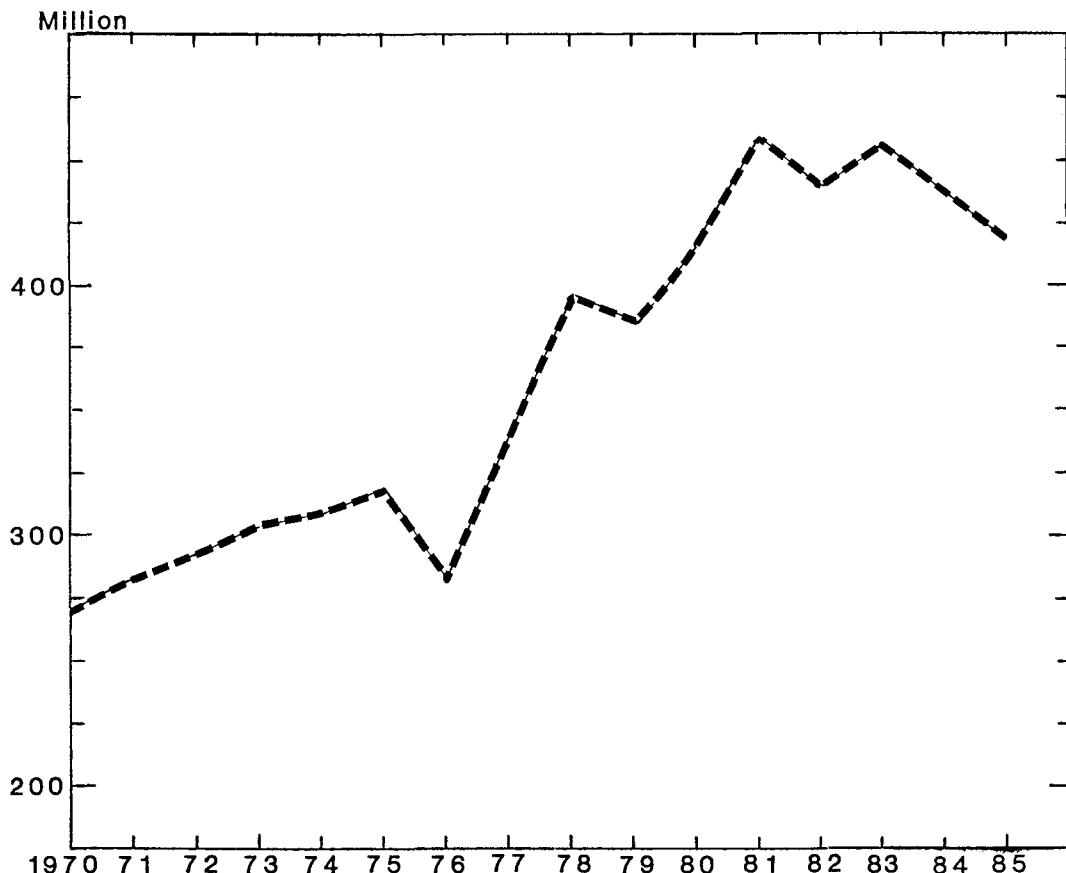

CHICKENS AND EGGS

Value of eggs produced in Utah totaled \$17.4 million in 1985, down 9 percent from the 1984 figure due to both lower production and price. Production of 418 million eggs in 1985 was 4 percent below a year earlier. The average seasonal price during 1985 was 50 cents per dozen compared with 53 cents per dozen during 1984 and 1983. The production decline resulted from fewer layers and lower production per layer. The average number of layers, at 1,827,000, was 1 percent below 1984; and 229 eggs produced per layer was 7 eggs per layer below the previous year's average.

Pounds of chicken sold, at 5 million pounds in 1985, was 15 percent above 1984; but the lower average price of 8 cents per pound, 1 cent below the 1984 average, reduced value of production to \$400,000--7 percent below 1984. The 5 million pounds of chicken sold in 1985 was the largest amount sold in the past decade by Utah poultry producers.

TURKEYS

Turkey production in Utah is centered around Moroni, running from Fountain Green in northern Sanpete County to Richfield in Sevier County. In Utah, specialization of turkey production is evident as the average size of turkey farms is approximately 40,000 birds.

In 1985 the price per pound of turkey was above the 1984 price, which has been the record high level. Producers received an average of 62 cents per pound in 1985--3 cents per pound above the 1984 average.

There were 3,082,000 birds raised in 1985, up 29 percent from 1984, with an average weight of 24.3 pounds--up 1.5 pounds per bird from 1984. Total pounds produced in 1985 was 74,893,000 pounds, 38 percent above the 1984 production total. Gross income from turkey production was \$46,433,000--up 45 percent from 1984.

UTAH TURKEY GROSS INCOME, 1973 - 1985.

1/ Includes home consumption, less than 1% of production. 2/ Record high turkeys raised.

UTAH AGRICULTURAL STATISTICS 1986**MINK**

Utah ranked third, nationally, in mink pelt production for 1984, and second in females bred to produce pelts in 1985. All color classes are produced in the State. Standard is most common, accounting for 38 percent of the pelts produced in 1984. Other popular colors accounting for 10 percent or more of the 1984 pelts were Demi-Buff, Ranch Wild, and Violet. Mink production is centered primarily in five north central counties--Salt Lake, Utah, Summit, Morgan, Cache--producing over 90 percent of the pelts in 1984.

During 1984, 487,500 mink pelts were produced in Utah--4 percent less than in 1983. Females bred to produce pelts in 1985 totaled 148,300. This was 5 percent less than the previous year.

UTAH AGRICULTURAL STATISTICS 1986

FARM LABOR

Farm labor data on the state level for 1985 are not available, primarily due to budget constraints. The data are, however, published both on national and regional levels. Utah is part of the Mountain II region, which also includes Colorado and Nevada.

AGRICULTURAL PRICES

The raw price data collected by Agricultural Statistical Board enumerators are the basis for the series of average prices and the price indexes that play a key role in farm programs. In addition to providing a basis for determining deficiency payments, the estimates of prices received for various farm products are used to calculate an Index of Prices Received by Farmers, which provides a single indicator of the overall direction and pace of farm product prices.

The "bookkeeping lag"--the fact that data are not immediately available--makes it necessary to figure two series of prices received. A preliminary mid-month price is estimated for the current month. Since sales quantity information is not available, prices are weighted on historic sales information. At the same time, the total quantity purchased and total dollars received by growers during the previous month are obtained and used to revise the mid-month data of the previous month.

Prices for most commodities relate to the mid-month level for sales about the 13th to the 17th, when the data are collected. However, prices for a few commodities, such as milk and wool, relate to all sales during the month; and beginning in 1977, barley prices represent an average for sales during the entire month.

Monthly prices have been discontinued for several agricultural products produced in Utah, because the state accounts for a very small portion in comparison with the U.S. total. Only a season average price is now estimated for wheat, corn, oats, dry beans, potatoes, hogs, chickens, and eggs. These can be found in the sections covering the production of each of the agricultural commodities in this publication.

1/ Mid-month average price through 1979. Prices after 1979 are revised full month prices. 2/ Average for the month. 3/ Insufficient sales.

COUNTY ESTIMATES

County estimates provide detailed information about the differences between counties and their relative contributions to Utah agriculture. A cooperative agreement between the Utah Department of Agriculture and the Utah Agricultural Statistics Service provides funding in support of the county estimates program.

Box Elder County dominates wheat production in Utah with 3.0 million bushels produced in 1985. San Juan County, a distant second, produced only about one-third as much wheat. The race for the leading county in barley production is much closer. Cache County, with 2.1 million bushels, leads; but Box Elder County follows closely with 1.9 million bushels. Oats production is greatest in the higher elevation counties of Wasatch and Duchesne. Box Elder County leads in corn for grain production, while Utah County is "Number 1" in corn silage production. Millard County led in alfalfa hay production in 1985, with Cache and Iron Counties placing second and third. Over 50 percent of the potatoes grown in the state are raised in Washington and Iron Counties.

As of January 1, 1986, Cache County--the leading county for milk cow numbers--had 21,000 head, sharply above second ranking Box Elder County's 9,500 head. Beef cow numbers were the greatest in Box Elder County followed by Duchesne, Rich, and Uintah Counties. The leading county for total cattle and calf numbers is Box Elder, with Cache County second. Sheep are moved back and forth between summer and winter ranges. Based on location of the headquarters, ranch sheep and lamb population in Sanpete County--at 94,000 head--far exceeds the second ranking Utah County with 52,000 head.

Utah County was our leading mink pelt producer in 1984, with 138,200 pelts produced. Morgan County, with 118,100 pelts, was second; while Salt Lake County placed third with 90,100 pelts.

Cash receipts estimates for 1984 show Cache County, with \$64.9 million, as the leading county. Utah County was a close second, with \$63.9 million; followed by Box Elder with \$59.3 million, and Sanpete with \$57.7 million.

UTAH AGRICULTURAL STATISTICS 1986

WEATHER

Gaylen L. Ashcroft, Assistant Utah State Climatologist

Precipitation Summary: The driest month of the year, August, was on the heels of the wettest, July. Other months that were generally wet were March, September, October and November. Most of the generally drier months had some area that was wetter than normal. For example, in January the anomaly was the eastern area (Uinta Basin and Southeast); in May it was the mountainous parts of the north (North Central and Northern Mountains); and in December it was the northwestern area (Western and North Central). The South Central Division was anomalous in June with 133 percent of normal while the state averaged 91, and again in September with 87 percent compared with the state's 191.

PRECIPITATION, PERCENT-OF-NORMAL, BY CLIMATIC DIVISION, 1985

| Division | Month | | | | | | | | | | | |
|--------------------|-------|------|------|------|-----|------|------|------|------|------|------|------|
| | Jan. | Feb. | Mar. | Apr. | May | June | July | Aug. | Sep. | Oct. | Nov. | Dec. |
| Western..... | 56 | 79 | 143 | 48 | 97 | 75 | 235 | 7 | 218 | 135 | 197 | 106 |
| North Central.... | 53 | 91 | 112 | 32 | 150 | 92 | 263 | 4 | 227 | 128 | 220 | 102 |
| Northern Mountains | 37 | 70 | 122 | 54 | 140 | 94 | 244 | 3 | 179 | 134 | 241 | 56 |
| South Central.... | 63 | 49 | 168 | 140 | 109 | 133 | 229 | 12 | 87 | 167 | 222 | 74 |

| Dixie..... | 102 | 28 | 71 | 83 | 71 | 67 | 150 | 5 | 159 | 150 | 253 | 48 |

Temperature Summary: Temperatures during the "cold-weather" season were generally below normal. During the winter months (Jan., Feb., and Dec.) the negative departures were large in the northern parts of Utah--especially during February when the mean temperature of the North Central Division was near the record low. The "warm-weather" season was hotter than normal throughout the state.

CROP ENTERPRISE BUDGETS

Prepared by the Economics Department, Utah State University

Once again the Utah State University, Logan, Utah has made available crop enterprise budgets for Utah. Using the cost and income figures presented in the model, it is possible for the individual producer to compare his operation with the average, and to get some idea of his potential profit/loss picture. If there are questions or suggestions regarding these budgets, please call Larry K. Bond at (801)750-2319 in Logan.

Estimated Receipts, Costs, and Net Returns for Alfalfa Hay^{1/} Produced on Class II Irrigated Cropland, Utah, 1985.

| ITEM | YIELD OR USE | UNIT | RATE | TIMES OPERATION PERFORMED | LABOR | POWER AND MACHINERY | MATERIALS AND SERVICE | TOTAL |
|-------------------------------------------------------|-----------------|-----------|---------------|---------------------------------|---------|---------------------------|-----------------------------|----------|
| -----\$/ACRE----- | | | | | | | | |
| RECEIPTS: | | | | | | | | |
| Alfalfa, in tons/acre | 5.00 | TON | \$60.00 | | | | | \$300.00 |
| Byproducts, in AUM's | 0.25 | AUM | \$9.00 | | | | | \$2.25 |
| Total | | | | | | | | \$302.25 |
| VARIABLE COSTS: | | | | | | | | |
| Fertilizer, in units of P | 50.00 | AVAIL LBS | \$0.22 | 1 | | \$11.00 | \$11.00 | |
| Application | | | | 1 | | \$4.00 | \$4.00 | |
| Water, operation, & maintenance ^{2/} | | | | 1 | | \$10.00 | \$10.00 | |
| Ditching | | | | 1 | \$5.00 | \$5.00 | \$10.00 | |
| Spraying | | | | 1 | \$0.25 | \$4.00 | \$8.00 | \$12.25 |
| Irrigation | | | | 4 | \$12.00 | \$12.00 | \$24.00 | |
| Swathing (custom) | | ACRE | \$12.00 | 3 | \$3.00 | \$33.00 | | \$36.00 |
| Baling (custom) (65 lbs/bale) | | BALE | \$0.36 | 3 | \$4.00 | \$39.12 | \$12.32 | \$55.44 |
| Hauling (custom) | | BALE | \$0.25 | 3 | \$3.00 | \$35.50 | | \$38.50 |
| Interest --on variable costs for 6 mos. ^{3/} | | | 12.00% | | | | | \$12.07 |
| Total | | | | | | | | \$213.26 |
| FIXED COSTS: | | | | | | | | |
| Land taxes assessed at \$80.00 | | 70.00 | mills | | | | | \$5.60 |
| Other | | | | | | | | \$10.50 |
| Total | | | | | | | | \$16.10 |
| TOTAL COSTS | | | | | | | | \$229.36 |
| COST PER UNIT OF OUTPUT | | | | | | | | \$45.87 |
| NET RETURNS TO OWNER-OPERATOR | | | | | | | | |
| RETURN TO CLASS II LAND ASSUMING ^{3/} | | \$60.00 | RENT PER ACRE | | | | | \$72.89 |
| RETURN TO OPERATOR MANAGEMENT | | | | | | | | \$60.00 |
| | | | | | | | | \$12.89 |

^{1/} This budget does not show a cost for establishing the alfalfa stand. Depending on how the stand is established, the user should adjust the budget to reflect their cost.

^{2/} The budgets assume surface methods of irrigation.

^{3/} An assumed land rent is used to indicate the land cost.

UTAH AGRICULTURAL STATISTICS 1986
