LIVESTOCK & LIVESTOCK PRODUCTS

Weather & Crop Conditions

January was a relatively dry month across the Commonwealth with a few spotty showers. Topsoil moisture was adequate, but producers were concerned about low subsoil moisture. Small grains looked good. Grain farmers were topdressing winter grain crops and scouting for aphids and other small grain pests. Hay was still in short supply with elevated prices. Other activities included repairing fences and equipment, attending educational programs, tax preparations and making planting decisions for spring.

February was a dry month with higher than normal temperatures. Topsoil moisture was adequate throughout the month. Small grains looked good; farmers were applying nitrogen and herbicides to the small grains. Hay was still in short supply with elevated prices. Maple Syrup production was in full swing with average sweetness and volume. Lambing and calving started with no major problems. Winter feed supplies remained tight for producers, who started feeding earlier than normal in the fall. Greenhouse production for vegetables started. Other activities for the month included attending educational meetings, reviewing crop insurance policies, seeding tobacco greenhouses and repairing farm equipment.

March was another dry month; however, topsoil moisture was adequate. Small grains continued to look good as most farmers finished up nitrogen applications. Soybean and corn producers were preparing land and equipment for the planting season. Maple Syrup production concluded with average yields for the year. Lambing and calving was underway with no major problems. Other activities included fertilizing pastureland and mending fences.

April was cool and wet. Light to heavy showers were present every week. In between the rain showers, farmers began planting corn. Hay and pasture benefited from the cool and wet weather. Towards the end of April, strawberries were harvested and regular vegetable planting began.

May began with tornado damage in the eastern part of the state. The damage included downed fences, fallen trees, destroyed barns, and at least one homestead destroyed. The month was mostly cold and wet. Despite the continued rainfall, some progress was made on the soybean and corn plantings. Seed rot was brought on by the wet and cool weather; in some cases growers began replanting corn. Most farmers held off from making hay due to the precipitation. Other activities included shearing sheep, building fences, and applying lime and fertilizer to pastures.

June was a difficult month for field crops. Cool temperatures and the lack of water in parts of the state stunted corn growth and caused some yellowing. By mid-June, a hailstorm damaged several hundred acres of crops located in northern and central Virginia. Because of seed rot and hail damage, some farmers replanted corn and soybean fields. Meanwhile, southern Virginia continued to suffer from drought-like conditions. Despite the lack of rain, the tobacco and hay crops looked favorable. The initial hay yields were also favorable. Other farming activities included side-dressing corn, spraying peanuts for weeds, bailing straw, and planting pumpkins.

Continued.

-Weather & Crop Conditions, continued-

July experienced scattered rain showers. Corn improved a little with rain, but most crops showed no significant improvements. In parts of the state, hay and pastureland quickly diminished due to the lack of water. The winter wheat harvest wrapped up in July. The wheat yields were outstanding, setting a new record for Virginia at 71 bushels per acre. Growers were busy planting double crop soybeans, spraying insecticides, tending the vegetable crop, cutting hay, and harvesting blueberries, peaches, and blackberries.

August was mostly a hot, dry, and windy month, with occasional scattered rain. It was not until the end of August that remnants from Hurricane Fay brought much needed precipitation. The rain fall varied from 1/5 of an inch to over 5 inches. In some cases, this rain was too late to benefit corn and single crop soybeans. Cattle were sold off early to compensate for deteriorating pastures. Some livestock producers began giving cattle supplemental feed. Irrigation was underway, but in some places irrigation water was exhausted. The cooler than normal weather that occurred during planting time started to show in the tobacco and soybean crop. The tobacco and soybean crops were several weeks behind schedule. Other farming activities included harvesting ginger gold apples, peaches and tomatoes, picking tomatoes, and preparing fields for strawberry plantings.

September started off with Tropical Storm Hanna bringing rain to most of the Commonwealth. Central and northern Virginia reported the heaviest rainfall, between 4 to 7 inches. However, some southwestern counties saw little to no rain. By the end of the month, the weather was dry with cool evenings. For the most part, pastures began to green up and farmers were optimistic for another hay crop. The corn harvest fell behind schedule due to rain caused by Hanna. Corn yields varied significantly due to location and time of planting. Cattlemen continued to downsize their herds to compensate for the shortage of feed. Growers were busy harvesting tobacco, and purchasing lime, seeds, and fertilizer.

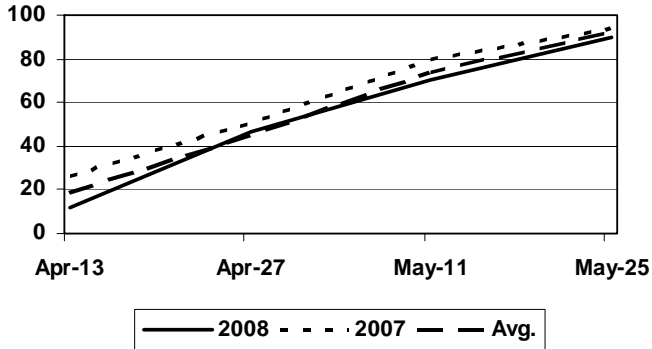

October began wet, with 1 to 5 inches of rain for most of state. The rain benefited late planted soybeans. Also at the start of the month, a few areas experienced their first frost. By mid-October, the weather changed to dry and cool. The corn harvest progressed well and the soybean harvest was beginning. In warmer parts of the state, farmers were waiting until the weather cooled a little more before planting small grains. Water reserves became a concern as parts of Virginia continued to suffer from drought-like conditions. Towards the middle and end of the month, most counties experienced a frost. The tobacco crop took a hit with the frost; growers salvaged what they could. The damage to the tobacco crop varied from none to moderate.

November brought rain to parts of the Commonwealth, while other parts of the state continued to suffer from dry conditions. The corn harvest was wrapping up and modest progress was made on the soybean harvest. Small grains were slow to emerge due to the cold temperatures. In some places, snow fell. Smyth county reported up to 5 inches of snow. Farmers became cautiously optimistic with feed and fuel prices decreasing. Other farming activities included cleaning up vegetable fields, renewing pesticide licenses, planting wheat and hunting deer.

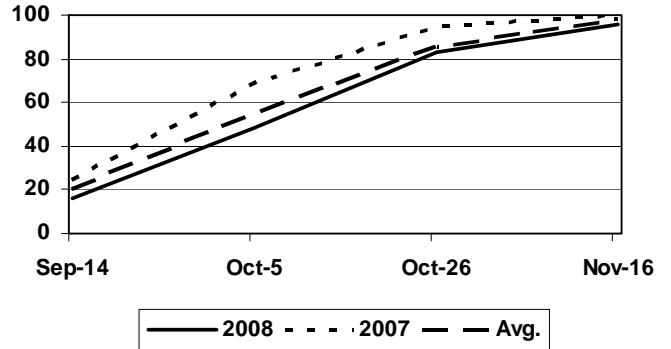

December brought much needed precipitation. In parts of the Commonwealth, ground water and stream flow were restored. However, there were still areas in the state that needed more water. Temperatures were variable. The month consisted of cold snaps with occasional warm days. Overall, the small grains benefited from the rain and temperatures. Other farming activities included renewing pesticide applicator licenses, preparing taxes, and fertilizing small grains.

Field Crops

Crops

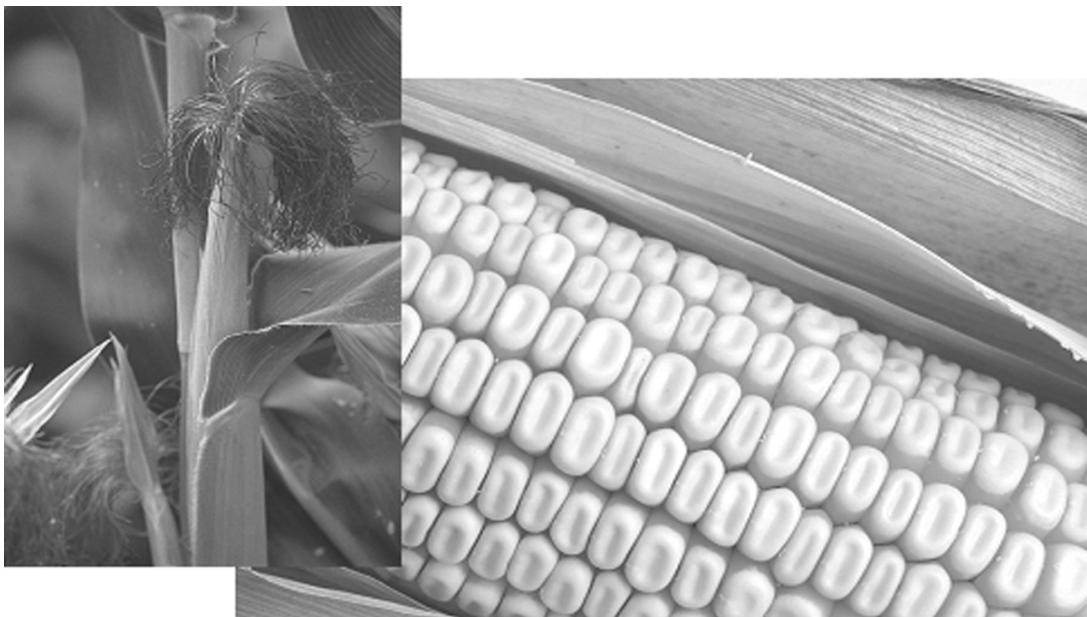

The 2008 crop year turned out to be a good year for the Commonwealth. Corn for grain yields averaged 108 bushels per acre, up 22 bushels from the previous year's yield. Soybean yields averaged 32 bushels per acre, 4.5 bushels above 2007. Virginia's peanut producers harvested an average of 3,300 pounds per acre this season, up 800 pounds per acre from last year. Flue-cured tobacco yields averaged 2,410 pounds per acre, 130 pounds above the 2,280 pounds per acre harvested in 2007. Burley tobacco yield was estimated at 2,000 pounds per acre, up 30 pounds from 2007. The cotton yield was 908 pounds per acre, up 79 pounds from 2007's yield. Ideal weather conditions and minimal insect and disease pressure attributed to the increase in yields from the previous year.

Prices

The market remained strong for Virginia agriculture producers in 2008. Several crops maintained the price levels seen in recent years, while others achieved record prices. The market year average price for corn rose to a record high for the second consecutive year, increasing \$0.11 per bushel to \$4.50 per bushel for 2008. Although the soybean market year average price showed a \$2.75 per bushel decrease from 2007, it remained steady at \$8.65 per bushel. The barley market year average price increased in 2008, as well, rising \$1.64 per bushel from 2007 to \$4.40 per bushel. Other crops reaching record high prices in 2008 included other hay, alfalfa hay, all hay, potatoes, and wheat.

Cash Receipts

Favorable prices help push total cash receipts for Virginia field crops in 2008 to 641.6 million dollars, up 30 percent from 2007. With the help of high commodity prices cash receipts for corn, at 152.6 million dollars, increased 50 percent from last year and moved this commodity to Virginia's number one cash crop. Soybeans, the previous top money earning crop had cash receipts of 134.1 million dollars, 5 percent lower than the previous year. Cash receipts for wheat, at 135.4 million dollars, increased 108 percent from the previous year. Peanut cash receipts, at 13.5 million dollars, increased 26 percent. Tobacco cash receipts of 82.7 million dollars were 16 percent greater than in 2007. Lower than normal grain stocks and increased international consumption accounted for much of the increase in cash receipts.

SELECTED CROP RECORDS, 1930-2008

Crop		Year	Harvested -acres-	Year	Yield -per acre-	Year	Production

Fruits

Apples

Apple production in the Commonwealth totaled 230 million pounds in 2008, 15 million pounds higher than 2007 and 10 million pounds above 2006. The growing season began with mild winter temperatures and above average precipitation in April and May. Bud and bloom development was on schedule and there were no significant losses reported due to late season cold weather. Hot, dry conditions persisted through June and July however the major apple regions received adequate rainfall during the season. Sizing was good and growers realized a better crop than the previous year. There were some reports of weather damage during September due to excessive rains and cold weather.

Peaches

The 2008 crop was significantly larger than the previous year as the 2007 crop was devastated by late season cold weather including both heavy frost and freezing weather. This year was more normal although extremely dry weather from June through August caused small fruit size. Every acre in Virginia was affected except for some areas in the Shenandoah Valley. The fruit that remained was mostly sold locally at higher than normal prices. Growers harvested 3,200 tons of peaches in 2008 compared with 1,600 tons the previous year and 4,000 tons in 2006.

Grapes

Grape production in Virginia increased in 2008 with the production of Vinifera varieties accounting for the majority of the overall production. Producers harvested a utilized crop valued at \$10.4 million, receiving an average price of \$1,530 per ton.

Virginia ranked 7th nationally in commercial grape production and 7th for bearing acreage. Virginia's grape producers harvested 7,000 tons of commercial grapes in 2008, up 25% from the 5,600 tons produced in 2007.

Virginia bearing acreage increased from 2,400 acres in 2007 to 2,500 acres in 2008, a 4% increase over that time span.

Chardonnay sustained its top position for 2008, comprising 24 percent of Virginia's total Vinifera production harvested for the year. This ever-popular variety accounted for 23 percent of all the Vinifera variety bearing acreage and 18 percent of the total vineyard acreage across the Commonwealth.

Chardonnay, Cabernet Franc, Merlot, Cabernet Sauvignon, and Vidal Blanc represented the top five varieties produced in Virginia in 2008. Chardonnay producers harvested 466 tons more in 2008 compared to 2007. Cabernet Franc producers harvested 109 tons more in 2008, and Merlot producers harvested 177 tons more in 2008. Also, Cabernet Sauvignon producers harvested 31 more tons in 2008, and Vidal Blanc producers harvested 22 more tons in 2008 compared to 2007.

For the majority of grape producers across the Commonwealth, 2008 demonstrated the quintessential components for a successful growing season. Rainfall in the early season could be described as plentiful, and in some cases excessive. However, mid-summer gave way to dry weather, with subsequent months progressively becoming hotter and drier. By and large, the growing season remained relatively problem free for most. Some obstacles included reports of damage from hail storms, a few cases of uncontrollable downy mildew and powdery mildew, and elevated wildlife pressure in some vineyards. A good number of these setbacks could be described as typical for grape growers in the mid-Atlantic and did not appear to have an impact on the crop at the state level.

Harvest commenced in late August and, with the exception of some very late-maturing varieties, was completed by late October. In some instances, scattered frosts mid-October forced producers into an early harvest. Overall, yields were generally good. Fruit quality was variable. While some growers commented on the purity and high quality of fruit, others commented on the slowness with which fruit ripened in September. Premium fruit quality could be linked to areas where crop levels were managed and where crops were able to evade rainfall preceding harvest. A common thread, however, was higher than usual juice acidity and somewhat lower than usual pH. Many growers mentioned that harvest was delayed a week to 10 days.

Vegetables

It was a dry year for vegetable growers in the Commonwealth. Due to dry conditions, most of the reported vegetable yields were lower when compared to last year. Virginia vegetable growers harvested 500 acres of cabbage, no change from last year. Cabbage yielded 150 hundredweight per acre, the lowest in the last 10 years. One thousand acres of cucumbers were harvested in the Commonwealth, consistent with last year's harvest. The price for cucumbers came up \$3.30 when compared to last year to \$22.00 per hundredweight. Virginia's snap beans remain a predominate crop at 5,000 acres harvested for fresh market use. The yield was 33

hundredweight per acre, down 23 hundredweight per acre from last year. The state's sweet corn saw a remarkable price recovery at \$33.20 per hundredweight, up from last year's \$17.00 per hundredweight. Virginia's tomato production falls third in the nation, behind California and Florida. It was a tough year for tomato growers with a low yield of 280 hundredweight per acre. Local tomatoes sold for \$38.70 per hundredweight, up \$2.50 from last year. Watermelon production was 264 thousand hundredweight, up 15 percent from last year.

^{1/} Principal producing counties based on 2007 Census data.

Livestock and Dairy

Cattle and Calves

Virginia's cattle producers continued to reduce their herd size for the third consecutive year. As of January 1, 2009, Virginia had 1,460,000 cattle and calves; this is down 110,000 head from the previous year. Beef cows decreased to 633,000 head, down 59,000 head from last year. Milk cows for the state totaled 97,000 head, the lowest on record for the Commonwealth. Calves under 500 pounds were 350,000 head, down from 2008 by 15,000 head. The calf crop totaled 670,000 head, down 50,000 head from last year.

Milk Production

Milk Production in Virginia totaled 1.73 billion pounds, down 2 percent from last year. The decrease in milk cows on farm contributed to the decrease in total milk production. Milk per cow was up 82 pounds at 17,612 pounds per cow. The Gross Producer Income for 2008 was 371.5 million dollars, down .2 percent from last year.

Sheep and Lambs

Sheep and Lamb inventory in Virginia totaled 75,000 head on January 1, 2009, down 6,000 head compared to last year. Ewes one year and older totaled 48,000 head,

down 2,000 head from a year earlier. There were 11,000 replacement lambs on the first of the year, down 1,000 head from last year. The 2008 lamb crop was 60,000 head up 3,000 head from the previous year. Sheep and lambs for market slaughter totaled 13,000 head, down 3,000 head from the previous year. Virginia was 22nd in the nation for total number of sheep.

Goats and Kids

Meat and all other goats in Virginia totaled 62,000 head, up 6,000 head compared to January 1, 2009. Milk goats totaled 4,500 head, unchanged from a year earlier. Virginia ranks 10th in the nation for total number of meat and other goats.

Hogs and Pigs

There were 350,000 Hogs and Pigs in Virginia as of December 1, 2008. This was down 20,000 head from last year. Breeding hog inventory totaled 30,000 head and market hogs totaled 320,000 head. Market hog inventory decreased 20,000 head when compared to December 1, 2007. The 2008 pig crop totaled 528,000, down 21,000 head from last year. Sows farrowed decreased 3,000 head from the previous year to 56,000 head. The average pigs per litter, at 9.43 pigs, was up 1 percent from 9.31 in 2007.

Poultry

Commercial Broilers

Virginia ranks 9th in the nation for broiler production. The number of broilers raised in Virginia increased by .1 million from 250.2 million in 2007 to 250.3 million in 2008. Pounds produced in 2008 were 1.25 billion, down 49.5 million from 2007. The total value of broilers in the Commonwealth increased by 1 percent from 559.4 million dollars in 2007 to 563.2 million dollars in 2008.

Turkeys

Turkey's are Virginia's highest ranking poultry commodity with the Commonwealth ranked 5th in the nation. Turkey production decreased by 500 thousand birds from 18.5 million in 2007 to 18 million in 2008. Turkey pounds produced

(Turkeys continued)

showed a slight increase in 2008 from 482.9 million pounds in 2007 to 484.2 million pounds in 2008. The total value of Virginia's turkey production increased 8 percent from 251.1 million dollars in 2007 to 271.2 million dollars in 2008.

Eggs

Virginia egg production totaled 726 million in 2008, down 68 million from the 794 million eggs produced in 2007. The value of egg production went from 78.9 million dollars in 2007 to 77.1 million dollars in 2008, a 2 percent decrease. Producers averaged \$1.27 per dozen of eggs, which is up \$0.08 from 2007. Virginia ranks 29th in the U.S. in egg production.

Trout

Production

Virginia's 2008 Commercial Trout Production was valued at 1.6 million dollars. This is up 14 percent from the 1.4 million dollars in 2007. This ranks Virginia 7th nationally in value of trout sold (excluding eggs).

Sales

Foodsize trout sold totaled 634,000 pounds, up 48,000 pounds from 586,000 pounds in 2007. The average value per pound for foodsize trout, at \$2.26, was 9 cents above the 2007 price. Foodsize trout account for the largest portion of the Commonwealth's trout sales. Processors were the biggest sales outlet for foodsize trout.

Loss

There were 293,000 trout lost in 2008, down 510,000 from 2007. At the U.S. level the top three causes for trout losses were disease, predators, and drought.

Honey

Production

Virginia had 6,000 producing colonies in 2008, which is no change from 2007. Honey price decreased from \$2.43 per pound in 2007 to \$2.18 per pound in 2008. Honey production (from producers with at least 5 colonies) totaled 252,000 pounds in 2008, down 24,000 pounds from the previous year. Yield per colony was 42 pounds in 2008, down from 46 pounds per colony in 2007. Stocks in 2008 equaled about 18 percent of production, down from 23 percent last year.

U.S.

U.S. honey production in 2008 from producers with five or more colonies totaled 161 million pounds, up 8 percent from 2007. There were 2.30 million colonies producing honey in 2008, down 6 percent from 2007. Yield per colony averaged 69.9 pounds, up 15 percent from the 60.7 pounds in 2007. Colonies which produced honey in more than one State were counted in each State where the honey was produced. Therefore, yields per colony may be understated, but total production would not be impacted. Colonies were not included if honey was not harvested. Producer honey stocks were 50.4 million pounds on December 15, 2008, down 4 percent from a year earlier. Stocks held by producers exclude stocks held under the commodity loan program.

1/ For producers with 5 or more colonies. Colonies which produced honey in more than one State were counted in each State. 2/ Revised. 3/ Honey producing colonies are the maximum number of colonies from which honey was taken during the year. It is possible to take honey from colonies which did not survive the entire year.

4/ Stocks held by producers. 5/ Average price per pound based on expanded sales. 6/ Value of production is equal to production multiplied by average price per pound.

7/ Not published separately to avoid disclosing data for individual operations. 8/ Due to rounding, total colonies multiplied by total yield may not exactly equal production.

1/ 2004-2007 Revised. 2/ Value of agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development. 3/ A positive value of inventory change, represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

County Data Summaries

The following section highlights each county in Virginia. Included are the major crops and livestock species published for Virginia, along with the rank among all counties in the state. It is important to note that county data are not published for counties where individual operations may be disclosed or in counties with numbers too small to estimate.

Data published in this section are available elsewhere in this bulletin. Also, included with each county highlight table are the most recent agricultural census county data (2007) for the number of farms, total acres in farms and harvested cropland. Census cash receipts are shown for crops, and livestock and total cash receipts with rank in the state.

INFORMATION ABOUT VIRGINIA AGRICULTURE

Economic Impact of Agriculture in Virginia

Agriculture is Virginia's largest industry, with nothing else coming a close second. The industry has an economic impact of \$55 billion annually and provides 357,100 jobs in the Commonwealth. The industries of Agriculture and Forestry together have a total economic impact of \$79 billion annually and provide 501,500 jobs in the Commonwealth. Every job created in agriculture and forestry supports another 1.5 jobs elsewhere in Virginia's economy.

Production agriculture employs nearly 60,000 farmers and workers in Virginia and generates approximately \$3 billion in total output. Value-added industries, those that depend on farm commodities, employ an additional 76,000 workers and generate \$26 billion in total industrial output. Add to that the purchasing decisions of agriculture-related industry and the ripple effect contributes an additional 221,000 jobs and nearly \$26 billion in total annual output.

The Diversity of Virginia Agriculture

Virginia's agricultural production is extremely diverse. Many Virginia commodities rank in the top 10 among all U.S. states. These include: fresh market tomatoes, 3rd in the nation; leaf tobacco, 5th; apples and summer potatoes, 6th; fresh market snap beans, 7th; turkeys, peanuts, and grapes, 8th; and broilers, 10th.

In addition to its tangible benefits such as cash receipts and jobs, agriculture provides many intangible benefits. These include recreation, tourism, wildlife habitat, biodiversity, flood mitigation, improved water quality, and soil stabilization.

Virginia Agriculture in the Global Marketplace

- Virginia Agricultural Exports Totaled \$2.2 Billion in 2008 -

Virginia's agricultural sector has undergone significant modernization in recent decades. Productivity improvements due to increased mechanization and the adoption of new technologies have provided Virginia with a competitive advantage in the global marketplace. Virginia's farms provide food and fiber to feed and clothe consumers around the world. According to Dr. Jason Grant at Virginia Tech, nearly 53 percent of Virginia's farm economy is directly linked to foreign trade.

Virginia Farm Facts

Virginia has 47,383 farms.

The typical Virginia farmer is over 58 years old. More than 32 percent of principal farm operators are 65 or more years of age.

Virginia farms average 171 acres in size and assets worth over \$720,000.

Farms cover 8.1 million acres, or 32 percent of Virginia's total land area.

There were more than twice as many farms in Virginia in 1960 as there are today.

Approximately 17 percent of Virginia primary farm operators are female.

The average market value of an acre of Virginia farmland is \$4,213.

About eight percent of the farms in Virginia account for 85 percent of total farm sales.

Virginia farms employ more than 39,000 full-time and part-time workers.

About 87 percent of Virginia farms are owned and operated by individuals or families.

About 20 percent of Virginia farms share their net farm income with multiple households.

INFORMATION ABOUT THE VIRGINIA DEPARTMENT OF AGRICULTURE AND CONSUMER SERVICES

*VIRGINIA DEPARTMENT
OF AGRICULTURE AND
CONSUMER SERVICES*

Mission Statement

We promote the economic growth and development of Virginia agriculture, encourage environmental stewardship and provide consumer protection.

VDACS Programs

The Department's diversity is evident in the wide variety of programs it encompasses, including regulatory, environmental, promotional and one, the **Century Farm Program**, designed to recognize Virginia's historic farms. VDACS' programs help to ensure a safe and wholesome food supply, prevent or eradicate animal diseases, and assure consumers of a level playing field in commercial transactions. Other programs dispose of pesticides in an environmentally safe manner, grade products ranging from eggs to potatoes, and preserve Virginia's valuable farmland.

The **Ag Stewardship Program** provides a way to address water quality complaints on farms. The **Farm Link Program** seeks to bring farmers with assets to sell or transition together with aspiring farmers who lack those assets. The **Virginia's Finest Trademark Program** assures consumers of the highest quality products grown, produced or processed in Virginia and the **Virginia Grown Program** points consumers to products grown, raised, processed or produced within the state.

Regulatory Programs

Various regulatory programs ensure all citizens of a safe and wholesome food supply and fair trade practices through

- Food, dairy, meat, and poultry inspection
- Weights and measures regulation
- Animal disease control and surveillance
- Regulation of animal medications, remedies, and feeds
- Inspection and prevention of the spread of plant pests and diseases
- Investigation of unlawful practices
- Alternative dispute resolution
- Assuring crop and plant health and productivity
- Pesticide registration and regulation of pesticide use and storage
- Endangered species program for plants and insects
- Assurance of fair trade practices in commerce through motor fuels regulation and the commission merchants regulation.
