## Weather & Crop Conditions

**January** was moderately dry, with rain showers late in the month helping to replenish groundwater. At month's end topsoil moisture was rated at 90% adequate to surplus and subsoil moisture was rated at 71% adequate. The cold temperatures and dry weather slowed small grain growth and some producers began winter nitrogen applications. The moderate weather allowed the opportunity for laborious duties such as orchard pruning, fixing fences, equipment maintenance, and attending auction sales.

**February** was another dry month, which ended with a significant rain and snow event that brought welcomed precipitation across the state. Temperatures were normal to slightly above normal during most of the month, but became well below normal at month's end. Producers either started fertilizing small grains or made preparations to start fertilizing. Farmers were making plans for the spring planting season, and were buying seed and fertilizer. Other farm activities included attending meetings, doing taxes, and repairing machinery.

**March** showed improvements to soil moisture conditions throughout the state, as moderate rain and snow showers continued to accumulate precipitation. Both topsoil moisture and subsoil moisture showed a marked increase, with ratings at 70% and 64% adequate, respectively. Pastures and hayfields both demonstrated signs of new growth, and some of the hardest-hit regions began to recover from the previous year's drought. Row crop producers began to apply burn down applications to corn fields in preparation for early planting and field activities in small grain fields continued, with many producers applying spring nitrogen applications. Vegetable growers began planting early-season varieties, although wet fields in some areas delayed planting for several growers.

**April** can be described as a cool, wet month with intermittent warmer than average days, which farmers took advantage of for corn planting. The cooler temperatures took their toll on local strawberry crops and many farmers needed to utilize irrigation and fungicides to protect the crop from frost damage. Throughout much of the state, small grains continued to develop on schedule, and wheat fields benefitted from the precipitation and Nitrogen applications. Pastures and hayfields also showed significant improvement with new growth due to the wet weather conditions. By month's end, unseasonably warm temperatures and dry weather allowed for producers to catch up on previously delayed planting and field operations.

May was mostly dry, with sporadic rain showers delaying fieldwork occasionally throughout the month. Although the rain put a halt to field activities early on, producers took advantage of the subsequently dry weather to complete corn planting and make headway with soybean, cotton and peanut plantings as well. Grain producers remained diligent about scouting their fields, and with increased reports of powdery mildew in wheat and barley, the state saw a rise in chemical applications. The wet conditions delayed tobacco transplanting in some areas and the quality of greenhouse transplants showed some decline. A few frosty nights were felt throughout some areas of the State, with varying effect on vegetables, grasses and home gardens. Hay harvest began this month, as soon as fields were dry, and although some hay was a little mature, the first-cutting looked very good.

**June** began with additional rainfall, putting a halt to hay harvest and spring planting activities. A severe storm system mid-month created additional delays in hay harvest, the spraying and fertilizing of row crops, and affected the quality of wheat, barley and hay. The heavy rainfall caused lodging in some crop fields and trouble for producers struggling to get hay cut, cured and out of the fields. Producers across the state took advantage of clear, dry weather at the end of the month to advance the harvest of small grains and the planting of double-crop soybeans. As wheat harvest made good progress, producers quickly followed with double cropped soybeans to utilize the current surplus of soil moisture. Tobacco began to bloom and a topdressing of nitrogen occurred in some areas.

## -Weather & Crop Conditions, continued-

**July** started with clear, dry weather, giving producers ample opportunity to complete small grain harvest, as well as, the planting of double-crop soybeans. Both hayfields and pastureland remained in good condition, and many producers were able to finish their first or second cuttings. The remainder of the month saw intermittent rainfall, which provided short term relief to crops that were starting to show signs of moisture stress. Moisture conditions remained variable largely dependent upon location. With soybean planting concluded, producers actively began scouting their fields for pests and weeds and applying post-emergent herbicide treatments where needed.

**August** brought scattered rain showers to the Commonwealth. Although several weather systems made their way through the state throughout the month, precipitation remained sporadic. While some areas received beneficial rains, others experienced signs of moisture stress in both crops and pastures. Most cattle producers had plentiful forage for grazing, and many were able to harvest a second cutting of hay. Soybean scouting was a primary activity, and while corn earworm, armyworms, and loopers all made an appearance, the overall insect pressure remained limited. Some fungicide applications took place. The harvest of corn silage, burley tobacco, and dark tobacco all progressed on schedule and the harvest of peaches, apples and potatoes continued, as well.

**September** could be characterized by overall moderate temperatures and dry conditions, with periodic scattered showers throughout the month. The early on cool weather was welcomed by field workers, who tended fields to make headway on tobacco and corn harvest. With tobacco harvest underway, producers were busy pulling, curing, and delivering their crop and anticipation for a good, quality harvest remained high. Occasional rainfall developed during the month and even though corn harvest was halted in some areas, the timely precipitation helped to improve peanuts, late planted soybeans, and fall pastures. Scouting activities in soybean fields were a frequent endeavor, and in general, corn earworm counts remained low and minimal fields required treatment. By month's end, grain farmers were preparing for the upcoming harvest of soybeans, peanuts and cotton, with the initial plantings of barley, rye and wheat already occurring.

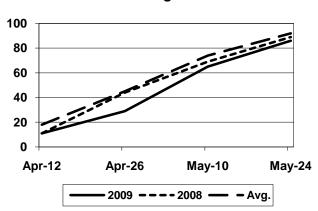

**October** was a productive one for farmers, as clear, dry weather throughout the month allowed for the advancement of row crop harvest, as well as, the harvest of fall and winter apples and hay. Vegetable farmers remained busy harvesting pumpkins, sweet potatoes, tomatoes and winter squash. Although a mid-month rain shower delayed fall harvesting activities, producers welcomed the much needed precipitation as it was extremely helpful in replenishing soil moisture and benefitting pastures, field crops, and small grain germination. As the weather cleared, harvest activities resumed, as well as, the planting of small grains and cover crops. In addition, the harvest of fall fruits and vegetables progressed, with sweet potatoes, squash and pumpkins all being completed.

**November** continued the pattern of frequent precipitation, with rain showers delaying harvest activities for many producers. The harvest of corn and peanuts began to wind down at the beginning of the month, although unfavorable weather made it difficult for soybean and cotton harvest to move ahead full force. Small grain and cover crop planting continued as conditions were favorable for rapid germination. Fieldwork was further delayed as the remnants of Hurricane Ida made its way across the state in the middle of the month. The three-day storm system, which consisted of heavy rainfall and high winds caused damage and flooding in several areas, although no significant agricultural flood damage was reported. Although farmers were anxious to resume fieldwork following the storm, the several days of dry weather that were necessary for fields to dry out never transpired and soybean and cotton harvest remained behind schedule. The additional rainfall benefitted small grain and cover crops that were already seeded, but some fields were lost due to flooding and others showed signs of nitrogen deficiency due to the heavy rain.

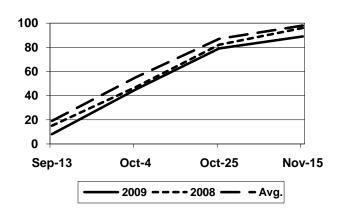

**December** brought persistent cold, wet weather, which continued to keep farmers from making significant progress on the harvest of soybeans and cotton and the planting of small grains. Across the Commonwealth, cold temperatures, excess rainfall and even snowfall in some areas prevented fieldwork from advancing. Much of the soybean crop still remained in the fields and many producers were forced to delay harvest until the ground was frozen solid. At this point, the plans of additional wheat planting were diminished, as the recommended planting dates had passed. The snowy weather forced many cattle producers to begin supplemental feeding, despite the extended growing period seen in pastures during the fall. Furthermore, the excessive rain caused significant yellowing in barley and wheat fields due to the wet conditions and much of the wheat that was planted developed poor stands due to flooded fields.

# Field Crops

#### **Crops**

Corn for grain yields averaged 131 bushels per acre, up 23 bushels from the previous year's yield. Soybean yields averaged 37 bushels per acre, 5 bushels above 2008. Virginia's peanut producers harvested a record average of 3,700 pounds per acre this season, up 350 pounds per acre from last year. Flue-cured tobacco yields averaged 2,340 pounds per acre, 70 pounds below the 2,410 pounds per acre harvested in 2008. Burley tobacco yield was estimated at 2,140 pounds per acre, up 140 pounds from 2008. The cotton yield was a record 1,052 pounds per acre, up 144 pounds from 2008's yield. Ideal weather conditions and minimal insect and disease pressure attributed to the increase in yields from the previous year.

#### **Prices**

Prices for corn, barley and wheat were down from 2008, while soybeans increased. Corn prices decreased 17 percent from \$4.51/bu to \$3.75/bu. Prices for barley declined 44 percent from \$4.22/bu to \$2.35/bu while

wheat prices decreased from \$5.88/bu to \$4.05/bu. The wheat price dropped 31 percent from 2008. Soybeans increased 5 percent from \$9.10/bu to \$9.60/bu.

#### **Cash Receipts**

Total cash receipts for Virginia field crops in 2009 at 590.4 million dollars, were down 11 percent from 2008 and up 18 percent from 2007. Cash receipts for soybeans, at 184.0 million dollars, increased 16 percent from last year and increased 31 percent for 2007. Tobacco sales, at 81.0 million dollars, were 2 percent lower than in 2008 and 14 percent more than 2007. Corn cash receipts, at 118.1 million dollars, were 16 percent less than the previous year. Cash receipts for cotton at 34.4 million dollars, was up 7 percent from 2008.

## **SELECTED CROP RECORDS, 1930-2009**

Crop		Year	Harvested -acres-	Year	Yield -per acre-	Year	Production

<sup>1/</sup> Preliminary.
2/ The yield was derived by dividing production by acreage and rounding to the nearest five pounds.

\* Counties with less than 500 acres and/or to prevent disclosure of confidential data have been included in the "District Total".

\*\* Unpublished districts and counties included in "State Total" to prevent disclosure of individual operations.

<sup>2/</sup> The yield was derived by multiplying production by 480 and then dividing by harvested acres and rounding to the nearest whole pound.

<sup>3/</sup> In 480 pound net weight bales.

Counties with less than 500 acres and/or to prevent disclosure of confidential data have been included in the "District Total".

<sup>\*\*</sup> Unpublished districts and counties included in "State Total" to prevent disclosure of individual operations.

# **Fruits**

#### **Apples**

Apple production in the Commonwealth totaled 245 million pounds, up 8 percent from last year and up 14 percent from 2007. The growing season for 2009 was favorable for apples. The year began cool and wet with minor frost damage. At the start of April, the majority of the apple crop was in fair to good condition. Growing conditions improved with ideal temperatures and timely showers. At harvest time, over 70 percent of the apple crop was in good condition.

#### **Peaches**

Virginia's peach production was up 600 tons from last year, totaling 5,800 tons. The price per ton for peaches averaged \$1,250, up from 2008 price of \$1,070. The highest price for peaches was Massachusetts at \$2,400 per ton. The lowest price was Washington at \$360 per ton. The US average price for peaches (excluding Clingstone) was \$709 per ton. At the time of harvest, approximately 90 percent of the crop was in fair to good condition. The peach harvest was completed by the second week in September, about one week behind normal.

#### Grapes

The 2009 growing season was a diverse season for grape producers across the state of Virginia. While some producers reported having an excellent crop, many stated that they experience poor fruit set due to extremely wet and cool weather during the spring. Some reported a total loss due to adverse weather conditions, such as hail, which knocked the buds completely off the vines, or rain, which contributed to disease. Animal pressure was also a problem, with deer, raccoons, turkeys, wild honey bees, birds and a bear all contributing to unharvested tonnage.

# Vegetables

There was moderate temperatures and sporadic rainfall throughout the Commonwealth during vegetable season. Due to dry conditions, most of the reported vegetable yields were lower when compared to last year. Virginia vegetable growers harvested 500 acres of cabbage, no change from last year. Cabbage yielded 140 hundredweight per acre, the lowest in the last 10 years. One thousand-three hundred acres of cucumbers were harvested in the Commonwealth, slightly higher than last year's harvest. The price for cucumbers was unchanged from last year's estimate of \$22.00 per

hundredweight. Virginia's snap beans remain a predominate crop at 5,200 acres harvested for fresh market use. The yield was 34 hundredweight per acre, up 1 hundredweight per acre from last year. It was a better year for tomato growers with a increased yield from 280 hundredweight per acre to 300 hundredweight per acre. Local tomatoes sold for \$43.90 per hundredweight, up \$5.20 from last year. Watermelon production was 165 thousand hundredweight, down 38 percent from last year.

# Livestock and Dairy

#### **Cattle and Calves**

Virginia's cattle inventory took a turn upward in 2009 for the first time since 2006. As of January 1, 2010, Virginia had 1,550,000 cattle and calves, which is up 80,000 head from the previous year. Beef cows increased to 665,000 head, up 22,000 head from last year. Milk cows however, continued to decline, and totaled 95,000 head, the lowest on record for the Commonwealth. Calves less than 500 pounds were 350,000 head, remaining the same as 2009. The calf crop totaled 690,000 head, up 10,000 head from last year.

#### Milk Production

Milk Production in Virginia totaled 1.74 billion pounds, up slightly from last year. This is despite a continuing decline in milk cows on farm shown in the past few years. Milk per cow was up 471 pounds at 18,083 pounds per cow. The Gross Producer Income for 2009 was 264.4 million dollars, down 29 percent from last year.

#### **Sheep and Lambs**

Sheep and Lamb inventory in Virginia totaled 89,000 head on January 1, 2010, up 14,000 head compared to last year. Ewes one year and older totaled 55,000 head, up 7,000 head from a year earlier. There were 12,000 replacement lambs on the first

of the year, up 1,000 head from last year. The 2009 lamb crop was 63,000 head up 3,000 head from the previous year. Sheep and lambs for market slaughter totaled 18,000 head, up 5,000 head from the previous year.

#### **Goats and Kids**

Meat and all other goats in Virginia totaled 52,000 head, down 10,000 head compared to January 1, 2009. Milk goats totaled 5,800 head, up 1,300 from a year earlier and Angora goats totaled 1,400 head.

#### **Hogs and Pigs**

There were 365,000 Hogs and Pigs in Virginia as of December 1, 2009. This was up 10,000 head from last year. Breeding hog inventory totaled 25,000 head and market hogs totaled 340,000 head. Market hog inventory increased 15,000 head when compared to December 1, 2008. The 2009 pig crop totaled 488,000, down 40,000 head from last year. Sows farrowed decreased 4,000 head from the previous year to 52,000 head. The average pigs per litter, at 9.38 pigs, was down slightly from 9.43 in 2008.

# Poultry

## **Commercial Broilers**

Virginia ranks 9th in the nation for broiler production. The number of broilers raised in Virginia decreased by 9.5 million from 250.3 million in 2008 to 240.8 million in 2009. Pounds produced in 2009 were 1.20 billion, down 47.5 million from 2008. The total value of broilers in the Commonwealth decreased by 4 percent from 575.7 million dollars in 2008 to 550.2 million dollars in 2009.

# **Turkeys**

Turkey's are Virginia's highest ranking poultry commodity with the Commonwealth ranked in the top 5 for the nation. Turkey production decreased by 1 million birds from 18 million in 2008 to 17 million in 2009. Turkey pounds produced showed a decrease in 2009 from 484.2 million

(Turkeys continued)

pounds in 2008 to 448.8 million pounds in 2009. The total value of Virginia's turkey production decreased 21 percent from 271.2 million dollars in 2008 to 215.4 million dollars in 2009.

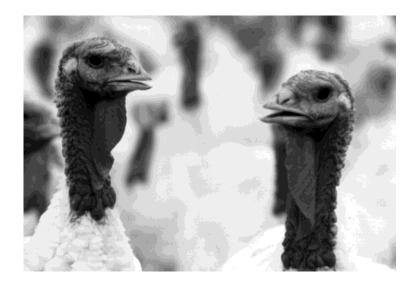

# **Eggs**

Virginia egg production totaled 741 million in 2009, up 2 million from the 726 million eggs produced in 2008. The value of egg production went from 77.1 million dollars in 2008 to 68.7 million dollars in 2009, an 11 percent decrease. Producers averaged \$1.11 per dozen of eggs, which is down \$0.16 from 2008. Virginia ranks 28th in the U.S. in egg production.

# **Trout**

# **Production**

Virginia's 2009 Commercial Trout Production was valued at 1,619,000 million dollars. This was up slightly from the 1,605,000 million dollars in 2008. This ranks Virginia 9th nationally in value of trout sold (excluding eggs).

## **Sales**

Food size trout sold totaled 600,000 pounds, down 34,000 pounds from 2008. The average value per pound for food size trout, at \$2.30, was 4 cents above the 2008 price.

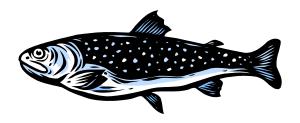

## Loss

There were 221,000 trout lost in 2009, down 72,000 from 2008. At the U.S. level the top two causes for trout losses were disease, and predators.

# Honey

## **Production**

Virginia had 6,000 producing colonies in 2009, which is no change from 2008. Honey price increased from \$2.42 per pound in 2008 to \$3.28 per pound in 2009. Honey production (from producers with at least 5 colonies) totaled 234,000 pounds in 2009, down 18,000 pounds from the previous year. Yield per colony was 39 pounds in 2009, down from 42 pounds per colony in 2008. Stocks in 2009 equaled about 24 percent of production, up from 18 percent last year.

#### U.S.

U.S. honey production in 2009 from producers with five or more colonies totaled 144 million pounds, down 12 percent from 2008. There were 2.46 million colonies producing honey in 2009, up 5 percent from 2008. Yield per colony averaged 58.5 pounds, down 16 percent from the 69.9 pounds in 2008. Colonies which produced honey in more than one State were counted in each State where the honey was produced. Therefore, yields per colony may be understated, but total production would not be impacted. Colonies were not included if honey was not harvested. Producer honey stocks were 37.2 million pounds on December 15, 2009, down 27 percent from a year earlier. Stocks held by producers exclude stocks held under the commodity loan program.

<sup>1/</sup> For producers with 5 or more colonies. Colonies which produced honey in more than one State were counted in each State. 2/ Revised. 3/ Honey producing colonies are the maximum number of colonies from which honey was taken during the year. It is possible to take honey from colonies which did not survive the entire year. 4/ Stocks held by producers. 5/ Average price per pound based on expanded sales. 6/ Value of production is equal to production multiplied by average price per pound.

<sup>7/</sup> Not published separately to avoid disclosing data for individual operations. 8/ Due to rounding, total colonies multiplied by total yield may not exactly equal production.

Net farm income	953,405	547,795	344,192	465,930	483,66

<sup>1/ 2005-2008</sup> Revised. 2/ Value of agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development. 3/ A positive value of inventory change, represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

#### VIRGINIA AGRICULTURAL EXPORTS: ESTIMATED VALUE, BY COMMODITY GROUP, FY 2005-2009

<sup>4/</sup> Excludes AK.

# County Data Summaries

The following section highlights each county in Virginia. Included are the major crops and livestock species published for Virginia, along with the rank among all counties in the state. It is important to note that county data are not published for counties where individual operations may be disclosed or in counties with numbers too small to estimate.

Data published in this section are available elsewhere in this bulletin. Also, included with each county highlight table are the most recent agricultural census county data (2007) for the number of farms, total acres in farms and harvested cropland. Census cash receipts are shown for crops, and livestock and total cash receipts with rank in the state.

# INFORMATION ABOUT VIRGINIA AGRICULTURE

#### **Economic Impact of Agriculture in Virginia**

Agriculture is Virginia's largest industry, with nothing else coming a close second. The industry has an economic impact of \$55 billion annually and provides 357,100 jobs in the Commonwealth. The industries of Agriculture and Forestry together have a total economic impact of \$79 billion and provide 501,500 jobs in the Commonwealth. Every job created in agriculture and forestry supports another 1.5 jobs elsewhere in Virginia's economy.

Production agriculture employs nearly 60,000 farmers and workers in Virginia and generates approximately \$3 billion in total output. Value-added industries, those that depend on farm commodities, employ an additional 76,000 workers and generate \$26 billion in total industrial output. Add to that the purchasing decisions of agriculture-related industry and the ripple effect contributes an additional 221,000 jobs and nearly \$26 billion in total annual output.

#### The Diversity of Virginia Agriculture

Virginia's agricultural production is extremely diverse. Virginia's agricultural production is extremely diverse. Many Virginia commodities rank in the top 10 among all U.S. states. These include: fresh market tomatoes and tobacco, 4th in the nation; apples and summer potatoes, 6th; fresh market snap beans and grapes, 7th; and peanuts, 8th.

In addition to its tangible benefits such as cash receipts and jobs, agriculture provides many intangible benefits. These include recreation, tourism, wildlife habitat, biodiversity, flood mitigation, improved water quality, and soil stabilization.

# Virginia Agriculture in the Global Marketplace - Virginia Agricultural Exports Totaled \$2.3 Billion in 2009 –

Virginia's agricultural sector has undergone significant modernization in recent decades. Productivity improvements due to increased mechanization and the adoption of new technologies have provided Virginia with a competitive advantage in the global marketplace. Virginia's farms provide food and fiber to feed and clothe consumers around the world.

# **Virginia Farm Facts**

Virginia has 47,383 farms.

The typical Virginia farmer is over 58 years old. More than 32 percent of principal farm operators are 65 or more years of age.

The average farms average 171 acres in size and has assets worth over \$720,000.

Farms cover 8.1 million acres, or 32 percent of Virginia's total land area.

There were more than twice as many farms in Virginia in 1960 as there are today.

Approximately 17 percent of Virginia primary farm operators are female.

The average market value of an acre of Virginia farmland is \$4,213.

About eight percent of the farms in Virginia account for 85 percent of total farm sales.

Virginia farms employ more than 39,000 full-time and part-time workers.

About 87 percent of Virginia farms are owned and operated by individuals or families.

About 20 percent of Virginia farms share their net farm income with multiple households.

# INFORMATION ABOUT THE VIRGINIA DEPARTMENT OF AGRICULTURE AND CONSUMER SERVICES

#### **Mission Statement**

We promote the economic growth and development of Virginia agriculture, encourage environmental stewardship and provide consumer protection.

# **VDACS PROGRAMS**

The Department's diversity is evident in the wide variety of programs it encompasses, including regulatory, environmental, promotional and one, the **Century Farm Program**, designed to recognize Virginia's historic farms. VDACS' programs help to ensure a safe and wholesome food supply, prevent or eradicate animal diseases, and assure consumers of a level playing field in commercial transactions. Other programs dispose of pesticides in an environmentally safe manner, grade products ranging from eggs to potatoes, and preserve Virginia's valuable farmland.

The **Ag Stewardship Program** provides a way to address water quality complaints on farms. The **Farm Link Program** seeks to bring farmers with assets to sell or transition together with aspiring farmers who lack those assets. The **Virginia's Finest Trademark Program** assures consumers of the highest quality products grown, produced or processed in Virginia and the **Virginia Grown Program** points consumers to products grown, raised, processed or produced within the state.

# **Regulatory Programs**

Various regulatory programs ensure all citizens of a safe and wholesome food supply and fair trade practices through

- Food, dairy, meat, and poultry inspection
- Weights and measures regulation
- Animal disease control and surveillance
- Regulation of animal medications, remedies, and feeds
- Inspection and prevention of the spread of plant pests and diseases
- Investigation of unlawful practices
- Alternative dispute resolution
- Assuring crop and plant health and productivity
- Pesticide registration and regulation of pesticide use and storage
- Endangered species program for plants and insects
- Assurance of fair trade practices in commerce through motor fuels regulation and the commission merchants regulation.
