

WEST VIRGINIA annual bulletin 2014

Walt Helmick, Commissioner

No. 45

The amount of food produced and consumed in the United States each year is enormous, by any measure. West Virginia alone consumes more than \$7 billion in food each year.

Agriculture is critical to our lives, our businesses, our educational system and our economy. It is a critical component of the security of our nation and our society.

Measuring and studying our agricultural output is clearly of great importance. Solid, reliable figures allow producers, policy-shapers and everyone involved in the food supply chain to make well-informed decisions that protect and enhance our food supply and promote our overall well-being as a people.

Providing those numbers is the job of the U.S. Department of Agriculture's National Agricultural Statistics Service-West Virginia (NASS-WV) Field Office – and it's a job they do exceptionally well. The information gathered, analyzed and distributed in this publication is vital to our farmers and, indeed, to all of us.

During my many years in public service, I have always relied on numbers to help me define issues and develop solutions to the challenges we invariably face. This booklet is a wealth of data on an industry that touches all of our lives every day. I hope you find it as interesting and useful as I do.

Sincerely,

Walt Helmick
West Virginia Commissioner of Agriculture

VALUE OF PRODUCTION in WEST VIRGINIA ^{1/2/} Principal Crops

^{1/} Value of production is computed by multiplying the market year average price by production. Value of production estimates relate to the crop year. These estimates should not be confused with cash receipts, which relate to sales during a calendar year irrespective of the year of production. Principal crops include corn for grain, soybeans, winter wheat, hay and tobacco. ^{2/} Estimates in 2006 and later exclude tobacco as a principal crop.

^{1/} Data for 2013 were not available at the time of publishing. Value of agricultural sector production is the gross value of the commodities and services produced within a year. Net value added is the sector's contribution to the national economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development. ^{2/} A positive value of inventory change represents current-year production not sold by December 31. A negative value (in parentheses) is an offset to production from prior years included in current-year sales. ^{3/} Forestry sales are included in the "Revenues from services and forestry" total. ^{4/} Negative values are in parenthesis.
