WYOMING WINTER WHEAT VARIETIES – 2023 CROP

Winter wheat growers in Wyoming planted an estimated 120,000 total acres during the fall of 2022 for harvest in 2023. SY Monument was the most popular variety planted, accounting for 11.3 percent of the total reported acreage. This was followed by WB 4483, at 7.4 percent, Pronghorn, at 5.4 percent, Willow Creek at 4.4, Buckskin at 2.8 percent, and Crescent AX at 2.8. Breck, Canvas, Denali, Fortify SF, LCS Atomic AX, SY Spur, SY Wolf, Warhorse, WB 4303, and WB 4595 each had one percent or more of the reported seeded acreage, but are not published separately to avoid disclosure of individual operations and are included in the Others category. Other reported varieties included AP18 AX, AP Solid, Cowboy, Longhorn, Ray, Steamboat, SY Wolverine, and WB 4462 which are also included in the Others category to avoid disclosure of individual operations.

Data for this report was collected along with the 2022 December Agricultural Production Survey conducted by the Mountain Regional Field Office of the National Agricultural Statistics Service, USDA. The survey was sampled to only provide a percentage of acreage for each variety, not an expansion of the acreage by variety or a measure of the sampling error.

We would like to thank all of the Wyoming farmers and ranchers who provided data, as well as the Wyoming Business Council for providing funding for this report. Please call (800) 392-3202 with questions or comments.

Winter Wheat: Reported Percent, Planted by Variety, Wyoming 2014 – 2023

| Variety | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 |
