WYOMING WINTER WHEAT VARIETIES – 2024 CROP

Wyoming wheat producers seeded an estimated 105,000 acres to winter wheat in the fall of 2023 for harvest in 2024, down 10,000 acres from the 2023 crop. Of the published varieties, **Crescent AX** was the most popular variety planted, accounting for 14.8 percent of the reported acreage. **Pronghorn**, with 10.3 percent, ranked second, followed by **AP Solid** at 2.7 percent, and **Willow Creek** at 1.8 percent. **Amplify SF, Breck, Goodstreak, Kivari AX, Steamboat, SY Wolf, Warhorse, WB 4303, WB 4462, WB 4483, WB 4595, WB 4733 CLP, WB 4792, and Yellowstone** each had 1 percent or more of the reported seeded acreage, but are not published separately to avoid disclosure of individual operations. These varieties are included in the Others category. Other reported varieties included **AP Bigfoot, Buckskin, Cowboy, Hallam, Ray, SY Monument, and WB 4523** which are also included in the Others category to avoid disclosure of individual operations.

Data for this report was collected along with the 2023 December Agricultural Production Survey conducted by the National Agricultural Statistics Service, Mountain Regional Field Office, USDA. The survey was sampled to only provide a percentage of acreage for each variety, not an expansion of the acreage by variety or a measure of the sampling error.

We would like to thank all of the Wyoming farmers and ranchers who provided data and the Wyoming Business Council for providing funding for this report. Please call (800) 392-3202 with questions or comments.

Winter Wheat: Reported Percent, Planted by Variety, Wyoming 2015-2024 ^{1/}

| Variety | 2015 Crop | 2016 Crop | 2017 Crop | 2018 Crop | 2019 Crop | 2020 Crop | 2021 Crop | 2022 Crop | 2023 Crop | 2024 Crop |
